

Our products suck

Around the world, hundreds of millions of plastic straws are used every day. All these straws are thrown away after a single use, escape the recycling system and end up in landfills and in our oceans. Plastic straws are anything but sustainable: they are produced in 5 seconds, are often used for only 5 minutes and take 200 years to break down.

The Sipster initiative

Sipster was founded by three young entrepreneurs who believe that the massive use of plastic straws can no longer be ignored. When we realized that every plastic straw would pollute our planet for another 200 years, we decided it was time to take action.

In 2017 the Sipster team met a local producer of reusable bamboo straws in the northern mountains of Vietnam. We were very impressed with his skills and product, and had found our first partner. Sipster has now grown into a platform with an extensive product line of sustainable straws, such as straws made of metal and straws made of potato starch that can be processed into compost after use. The platform has changed into a place where anyone who wants to stop using plastic straws can find a perfect alternative.

The alternatives

Product information
