

Solar Controller / Battery Charger

Input: DC12V Solar Panel (Max. 25V)

Output: DC12V 30A

Model Number: OC-SR30

User's Manual and Important Safety Information

Congratulations on purchasing an OzCharge Solar Controller Regulator.
OzCharge Controllers are comprised of the latest technology and suited to Aussie conditions:

Please carefully read these instructions before installing and using this device.

FEATURES

- Suitable for Conventional Lead Acid Type Batteries (AGM GEL & WET).
- Built in regulator to prevent your battery from being overcharged. Overcharging occurs when the charge voltage is unregulated. This can result in premature battery failure.
- Can be connected to the battery permanently to keep the battery fully charged by using a process called "floating". This means the controller will stop charging when the battery is full and will automatically start charging the battery as required. This process will also reduce water loss and help prevent the battery from 'drying out'.
- Protects your battery from discharge at night. Under low light or no light conditions the solar panel voltage could be less than the battery voltage. The unit contains a special circuit which prevents current flowing back from the battery and into the solar panel.
- Coloured LED's to indicate the operational status when there is power from the solar panel.
- Digital LCD to indicate battery voltage / current.
- Surface Mount or Flush Panel Mount options.

For use with 12 Volt Solar Panels Only.
Suitable for Solar Panels up to 510 Watts.

WARNING – IMPORTANT PLEASE READ...

- This device is to be used with 12V (nominal) Solar Panels only and the Panel(s) should not exceed 510W (30A) (total) limit.
- This charger is designed for indoor use only and should never be exposed to rain.
- Do not disassemble the charger. Take to a qualified person if the unit requires repairing.
- Lead acid batteries can be dangerous. Ensure no sparks or flames are present when working near batteries.
- Eye protection should always be used. Never short circuit the battery
- Given sufficient light solar panels always generate energy even when they are disconnected. Accidental 'shorting' of the terminals or wiring can result in sparks causing personal injury or a fire hazard. We recommend that you cover up the panel(s) with some sort of soft cloth so you can block all incoming light during the installation. This will ensure that no damage is caused to the Solar Panel or Battery if the wires are accidentally short circuited.
- Always install a battery fuse on each circuit including the solar controller
- Do not reverse connect the wires to the solar panel or battery.

MOUNTING THE DEVICE

The Solar Controller has two mounting options.

1. Surface mount:

The quickest and easiest way to mount the unit is to use the two plastic spacers and self tapping screws supplied and mount the unit to a flat surface,

2. Flush (panel) mount:

Before deciding to use this mounting method, please ensure there is sufficient depth behind the controller or in the cavity. (Refer to Diagram below)

Using the dimensions shown in the following diagram, mark a 95mm x 159mm rectangle where you wish to mount the controller and cut-out the panel opening then use the two self- tapping screws supplied to secure the unit.

WIRING CONNECTIONS

To protect the Battery and the Solar Panel, we strongly recommend that you place a 30A inline fuse on the positive wire on both the "Solar" and "Battery" Circuits. (As close to the Battery / Panel as possible)
 The Solar Controller has 4 terminals which are clearly marked 'Solar' and 'Battery'.
 There is a (12V) and earth (GND) terminal for each circuit.
 Refer to the wiring diagram below.

Correct Wire Size:

Please refer to the wire size chart below to determine the minimum size wire needed for each connection. This will also ensure you get the best performance out of your solar regulator.

	Battery Connection	Solar Array Connection		
Length of Wire	>2m	6m	9m	12m
Size (AWG)	8 or 6	10	8	6

- Using the Terminals supplied, crimp the terminals on your Solar Array wires and connect to the Solar Panel like shown.
- Using the Terminals supplied, crimp the terminals on your Battery wires and connect to the Battery like shown.

OPERATION – L.E.D INDICATORS

When the connections are completed, the Solar Controller will start charging the battery automatically.
 The unit has a 3 stage charging algorithm.

Bulk Charge (Level 1) – Constant Voltage (Level 2) – Float Mode (Level 3)

Please check your battery manufacturer's specifications to ensure the Boost Voltage switch is on the appropriate setting. **Boost Voltage** – Is the maximum Voltage used to charge a battery.

Typically for Gel and AGM batteries you would need to select 14.4V.

For all other Conventional and Calcium batteries, you would need to select 14.7V.

The 6 LED's indicate the charging status and the battery condition <i>(These only work when there is power from solar panel input)</i>	Solar Power	Charge Status				
	Red	Blue	Green	Green	Yellow	Red
Solar Power Present – No Battery Connected	ON	OFF	OFF	OFF	OFF	FLASH
Reverse Polarity / Short Circuit	ON	OFF	OFF	OFF	OFF	FLASH
Solar Power Weak	ON	FLASH	OFF	OFF	OFF	OFF
Battery Voltage below 11.5V (+/-0.4V)	ON	ON	OFF	OFF	OFF	ON
Battery Voltage between 11.5V - 12.5V (+/-0.4V)	ON	ON	OFF	OFF	ON	OFF
Battery Voltage above 12.5V (+/-0.4V)	ON	ON	OFF	ON	OFF	OFF
Float Mode (Battery Fully Charged)	ON	OFF	ON	OFF	OFF	OFF

A voltage less than 11.5 Volts indicates that the battery is discharged and needs re-charging.

Digital LCD Meter – This can either display the battery voltage, the charging current or it can be switch off.
 This switch maybe changed at any time during the charging process.

CHARGING CURVE (VOLTAGE)

SPECIFICATIONS

1 Electrical Parameters				
1-1	Normal input solar cell array voltage :	17 - 22	Typ.	Vdc
1-2	Max. solar cell array voltage (when output has no load)	25	Max.	Vdc
1-3	Current consumption when connected 15V Array (battery not present) :	35	Max.	mAdc
1-4	Current consumption when connected 12V battery (Array not present) :	25	Max.	mAdc
2 Output Control & metering Characteristics				
2-1	Charging Method: Level 1 → Level 2 → Level 3			
2-2	Minimum charging condition for Start Up			
2-2-1	Correct polarity at input and output;			
2-2-2	Charging starts when Battery voltage is not less than	5.0	+/-0.3	Vdc
2-2-3	Minimum solar cell array voltage	13.0	+/-0.3	Vdc
2-2-4	Solar cell array voltage is higher than battery voltage	1.0	+/-0.3	Vdc
2-3	Maximum Charging Current at Level 1 period	30.0	+/-1.0	Adc
2-4	Maximum charging voltage at Level 2 Period (for GEL Battery)	14.4	+/-0.4	Vdc
2-5	Maximum charging voltage at Level 2 Period (for LEAD-ACID Battery)	14.7	+/-0.4	Vdc
2-6	Level 1 to Level 2 Period when charging voltage reach (for GEL Battery)	14.1	+/-0.4	Vdc
2-7	Level 1 to Level 2 Period when charging voltage reach (for Lead-Acid Battery)	14.5	+/-0.4	Vdc
2-8	Level 2 to Level 3 Period when charging current reach (for GEL Battery)	4.0	+/-1.0	Adc
2-9	Level 2 to Level 3 Period when charging current reach (for Lead-Acid Battery)	4.0	+/-1.0	Adc
2-10	Maximum charging voltage at Level 3 Period	13.8	+/-0.4	Vdc
2-11	LCD Meter Accuracy at DC Voltage	1.25		%
2-12	LCD Meter Accuracy at DC Current at 5 ~30Amp	3		%
3 Protection				
3-1-1	Over temperature protection active at above		85	°C
3-1-2	The charger will resume the charging at about		65	°C
4 Electrical Parts				
4-1	Input / Output Terminals	M5 Terminals		
5 Physical Parameters				
5-1	Panel material :	Plastic, Standard ABS		
5-2	Panel Dimension :	175 (W) x 110 (H) mm		
5-3	Panel Cut Out Size:	159 (W) x 95 (H) mm		
5-4	Overall Depth :	approx. 45 mm		
5-5	Net weight :	approx. 360g		
6 Environmental Characteristics				
6-1	Operating temperature :	-5 to 45 °C		
6-2	Storage temperature :	-10 to 70 °C		
6-3	Operating Humidity range :	0 to 80% RH		

2 YEAR MANUFACTURER WARRANTY

Zylux Distribution Pty. Ltd. (OzCharge) warrants to the Customer that this product is substantially free from defects in materials and workmanship under normal use for a period of 2 Years from the Date of Purchase.

Please ensure you keep a copy of your receipt on file as this will be required for proof of purchase and to validate your warranty.

Obtaining Warranty Service

Within the warranty period, the Customer must contact the authorised supplier / retailer where the product was purchased or alternatively you can contact the OzCharge service centre through one of the following methods:

Hotline: (03) 9482 2203

Website: www.ozcharge.com.au

If the Authorised Supplier and / or OzCharge service centre concludes that while under normal use, a product failure or malfunction occurred during the warranty period and was caused by a defect in material or workmanship (see Exclusions), the Customer will be asked to ship to the nearest service point. The product must be packaged appropriately for safe shipment. To prove that the product is under warranty, the customer should enclose a copy of their receipt for proof of purchase. It is recommended that returned products be sent by registered mail as Zylux Distribution Pty Ltd. (OzCharge) accepts no responsibility / liability for goods lost or damaged in transit. Return Shipping costs to be incurred by the Customer.

Exclusions

If upon receiving a product for repair and if testing and examining the product has disclosed that the alleged defect or malfunction in the product does not exist or was caused by the Customer or any third persons misuse, physical abuse, water damage, unauthorised attempts to open, repair or modify the product or improper installation, this will not be covered under this warranty.

This Warranty is void if:

1. The product has been tampered or repaired by unauthorised personnel.
2. The warranty seal is broken or altered.
3. The warranty period has expired.
