

# NIGHTWATCH<sup>®</sup>

Equine Distress & Wellness Monitor

# The smart halter™

an equine distress & wellness monitor  
that might just save your horse's life

- **Real-time** monitoring
- **Automated** alerts
- **Objective** insight

From automated alerts for early intervention to objective insight for more informed decision making, NIGHTWATCH® allows you to optimize the health and wellbeing of your horse.

# REAL-TIME MONITORING

“

*Being able to transfer and use a single smart halter™ on all our horses is a huge asset to us.*

**Bill R**

Manager

“

NIGHTWATCH® is a complete monitoring system that offers real-time analysis of your horse's biometrics (heart rate, respiration) and behavior (activity level) for health and performance outcomes.

# AUTOMATED ALERTS

“

*If it wasn't for NIGHTWATCH®, I wouldn't have been there in time for the birth of my foal.*

**Erica D**

Owner

“

- Low Distress
- Medium Distress
- High Distress

NIGHTWATCH® acts as an early warning system that issues automated alerts via text, call, and email when your predefined thresholds for pain or distress (colic, foaling, being cast) are breached.

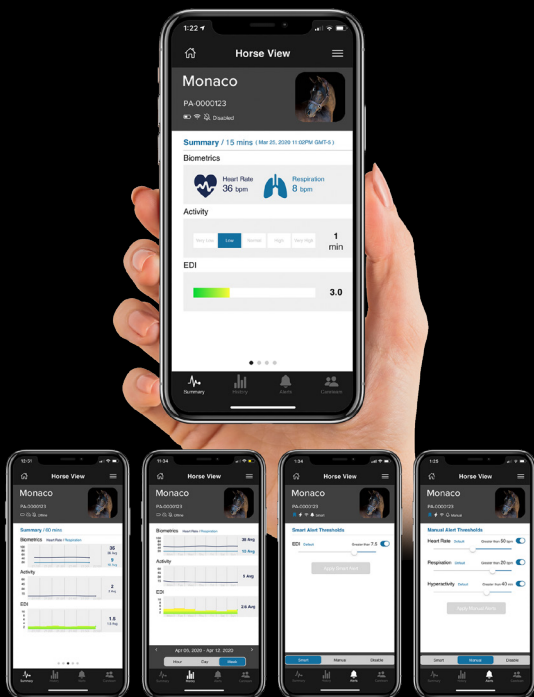

# OBJECTIVE INSIGHT

“

*NIGHTWATCH® is a game-changing tool for the practitioner, owner, and industry.*

**Scott B**  
Veterinarian

“

NIGHTWATCH® provides horse owners, trainers, breeders, and veterinarians 24/7 access to actionable and objective insight on your horse's EDI® score, biometrics, and behavior from the convenience of your phone.

# ENDLESS APPLICATIONS

## Performance Horses

Use smart alerts overnight to be alerted to early signs of distress in your race or show horse to avoid unnecessary downtime, injury, or loss, all while tailoring their daily training based upon overnight activity and general wellbeing.

SMART

Overnight

## Pregnant Mares

Use smart or manual alerts 30 days prior to foal date and continue for at least 90 days thereafter to monitor your pregnant mare for complications before, during, and after foaling, and to be alerted to early signs of birth/parturition.

SMART or MANUAL

-30 to +90 days

## High-Risk Horses

Use manual alerts as needed to monitor and share objective biometric and behavior insight with your careteam for more informed decision making regarding your senior, sick/injured, or post-operative horse, those who crib, windsuck, or weave, and any horse with suspect/borderline behavior or in need of rehab or step-down care.

MANUAL

As needed

## SAFETY

Breakaway halter  
1" triple stitched  
All-natural leather  
Stainless steel hardware

## COMFORT

Padded crown & noseband  
Adjustable chin option  
Rolled throatlatch  
Finished edges

## TECHNOLOGY

Water- and dust-resistant  
UWB-IR biosensor  
9-axis IMU  
Altimeter  
GPS

## CONNECTIVITY

WiFi (2.4 GHz)  
Cellular (3G, where available)

## POWER

12+ hours  
3 LiPo batteries  
3-hour charge time
