

# K2 PC DISPATCH CONSOLE

## COMMUNICATE MONITOR VIEW LOCATIONS

The K2 PC Dispatch console allows for easy communication between your field employees and office personnel, without the need for a base station radio.

With the K2 PC Dispatch software and a PC connected to the Internet, users will be able to engage in communication with all mobile and handheld radios in the field.

Dispatch users are able to speak to individual or all channels, as well as initiate private 1-1 conversations with one specific radio, or a group of radios they select from the console panel.

Dispatch users will also be able to instantly see the locations on a high resolution Google satellite map of all field personnel at any time.

Dispatchers will also be instantly alerted to any SOS notifications, triggered by any radios in the field.

When a radio triggers the SOS alert, the dispatcher will also see the location of the radio on a satellite map.

Lone workers can also be monitored, by simply setting a time variable in the console for the worker you wish to monitor. If a worker does not transmit within the given time frame, the console will alert to the missed check-in.

### TECHNICAL SPECS

Software	K2 PC Dispatch Console
OS	Windows 7/10
Channels	Unlimited Channels (Groups)
Private 1-1	Yes
Ad Hoc Groups	Yes
All Call	Yes
GPS Tracking	Yes, Google Maps Views
