Chapter 09 – ForEx & Risk Management

Every firm and individual operating in international environment faces problems with foreign exchange i.e., the exchange of foreign currency into domestic currency and vice-a-versa. Because the value of one currency relative to another is constantly changing, the conversion become risky. It has resulted in the foreign exchange risk management becoming one of the basic issues in international financial management.

The foreign exchange transactions (i.e., for the sale and purchase of foreign currencies) take place in foreign exchange market which provides a mechanism for transfer of purchasing power from one currency to another. This market is not a physical entity like the Mumbai stock exchange or a trading center, rather it is a network of telephones among banks, foreign exchange dealers and brokers etc.

The foreign exchange market operates at *four levels*.

- At the <u>first level</u>, there are tourists, importers, exporters, investors, etc. These are the immediate users and suppliers of foreign currencies.
- At the <u>second level</u>, there are commercial banks who act as clearing houses between users and earners of foreign exchange.
- 3) At the <u>third level</u>, there are foreign exchange brokers through whom the nation's commercial banks even out their foreign exchange inflows and outflows among themselves.
 - 4) Finally, at the <u>fourth and highest level</u> is the nation's central bank which acts as the lender or buyer of last resort when the nation's total foreign exchange earnings and expenditures are unequal. The central bank then either draws down its foreign exchange reserves or adds to them.

In short, A Foreign Exchange Market is a market in which individuals, firms and banks, buy and sell foreign exchange. It is an "Over the Counter" (OTC) Market, where foreign currencies are bought and sold against one another. The demand and supply functions play a big role in the determination of the exchange rate of the currency.

It is regulated by RBI, who appoints Authorised Dealers to give Foreign exchange quotations

State the "Participants" in a Foreign Exchange Market.

The participants in the foreign exchange market can be categorized as follows:

1) Non-bank Entities:

CA Ankit Sarvaiya ca.ankitsarvaiya@gmail.com FB & Telegram: Prof. CA Ankit Sarvaiya

	Many multinational companies exchange currencies to meet their import or export commitments or hedge
	their transactions against fluctuations in exchange rate. Even at the individual level, there is an exchange of
	currency as per the needs of the individual.
ור	Banks:
2)	Banks also exchange currencies as per the requirements of their clients
	Dunks also exchange currencies as per the requirements of their citents.
3)	Speculators:
	This category includes commercial and investment banks, multinational companies and hedge funds that buy
	and sell currencies with a view to earn profit due to fluctuations in the exchange rates.
4)	Arbitrageurs
-17	This category includes those investors who make profit from price differential existing in two markets by
	simultaneously operating in two different markets
	Stindical couply oper dailing in the arrene maintees.
5)	Governments:
	The governments participate in the foreign exchange market through the central banks. They constantly
	monitor the market and help in stabilizing the exchange rates.
۶v	plain an Exchange Pate
<u>en</u>	areign exchange rate which is also called a Carey rate or surrancy rate represents the value of a specific
	oreign exchange rate, which is also called a forex rate or currency rate, represents the value of a specific range, compared to that of another country.
Cur	rency compared to that or another country.
	₹/\$
Th	e given rate is a " \$" rate. In the above notation:
,,,,	
In	the above notation. for an Indian Person:
_	₹ is the Home Currency / Domestic Currency
_	\$ is the Foreign Currency
In	the above notation. For a US Person:
-	\$ is the Home Currency / Domestic Currency
_	₹ is the Foreign Currency
_	
_ In	a Foreign Exchange transaction, only one party remains at risk; The Party whose payable/receivable currency
	is different from his domestic currency remains at risk.
	is different from his domestic currency remains at risk.

exchange Rales can be quoted in 2 ways — Direct Quote	
Direct Quote	Indirect Quote
It means, how many units of Home Currency, will be	It means, how many units of foreign Currency, will be
needed to buy one unit of Foreign Currency.	needed to buy one unit of Home Currency.
Eg: ₹/\$ 60.45 — This is a dollar rate; this is a Direct	εg.: ₹ / \$ 60.45 — This is a dollar rate; this is an
Quote for <i>India</i>	Indirect Quote For US
Mathematically, it is expressed as follows: Direct Quote	= 1 Indirect Quote
Question 1:	
Convert the Following direct quotes into indirect quotes	For India: ₹ / \$ 55.75, ₹ / £ 81.63
Solution:	
₹/\$55.75 — This is a\$Rate — This is a direct qu	lote for ₹.
This means, that this is an Indirect quote for \$. Thi	IS, Indirect Quote For $\mathbf{F} = 1/$ Indirect Quote of \$ (i.e. Direct Quote for
= ¹ / _{55.75} = <u>\$ / ₹ 0.017937</u>	
i. ₹/£81.63 – This is a £ Rate – This is a direct quo	ite for ₹.
This means, that this is an indirect quote for £. Thu	IS, Indirect Quote For $\mathbf{F} = 1/$ Indirect Quote of E (i.e. Direct Quote for
= ¹ / ₈₁₆₃ = <u>\$ / ₹ 0.012250</u>	
<u>Explain the concept of Bid Rate, Ask Rate and Sprea</u>	<u>d</u>
₹/\$6	1.00 / 63.00
Dealers Point of View Bid F	Rate Ask Rate
Customer's Point of View Sell F	Rate Buy Rate
In this area the Rid Data is $\mp / - \pm 6100$ It means that the	$d_{\rm color}$ is ready to have Φ (also conjugate to the system of
willing to soll \$) at $\frac{3}{5}/\frac{5}{5}$ 6100. Similarly the Ask Data	is \neq (\$ 6200. It means that the dealer is ready to set
\hat{x} (also conjugate to the customer willing to buy \hat{x}) at \hat{z}	
	, \$ 03.00.
Spread = Dealer's Profit (therefore it is always pos	itive)
= Difference between the Ask Rate & Bid Rate	
= i.e. Difference between the Customer Buy & (Customer Sell rate

while Joiving Sums, always think from the	e customer 5 point of view and choose the ra
Question 2:	
Given that < / \$ is 64.35 / 65.65. what rate is it? h	Nhat is the Bid rate, Ask rate and spread from bank pol
view? Also calculate the Buy and Sell rate from custo	omer's point of view?
Cale da a	
- The given quote is ₹ / \$ is 64.35 / 65.65	\rightarrow It is a \$ rate
- ULU KOLE. $\langle / \downarrow \rangle$ 04.55, ASK KOLE. $\langle / \downarrow \rangle$ 05.05, Spread - $\frac{3}{4}$ ($\frac{1}{4} \leq \frac{1}{4} \leq \frac{1}{4}$) $\frac{1}{4} \leq \frac{1}{4} \leq \frac{1}{4}$	
- Spread = < / \$ 05.05 (-) < / \$ 04.35 = < / \$ 1.3	
- Customer Buy Rate = Ask Rate = ₹ / \$ 65.65	
- Customer Sell Rate = Bid Rate = ₹ / \$ 64.35	
Explain "Currency Conversions"	
Throughout the chapter, we have to convert 30,000	₹ into \$, or 40,000 \$ into ₹
₹ / \$ 6100 / 63	
	100 – This is a B Rate
	1.00 - This is a \$ Rate
Step 1: Choice of Rate	1.00 - This is a \$ Rate
 <u>Step 1: Choice of Rate</u> If the customer wants to buy \$ - then 63.00 	1.00 - This is a \$ Rate
Step 1: Choice of Rate - If the customer wants to buy \$ - then 63.00 . - If the customer wants to sell \$ - then 61.00	1.00 - This is a \$ Rate
 Step 1 Choice of Rate If the customer wants to buy \$ - then 63.00 If the customer wants to sell \$ - then 61.00 	1.00 - This is a \$ Rate
Step 1: Choice of Rate - If the customer wants to buy \$ - then 63.00 - If the customer wants to sell \$ - then 61.00 Step 2: Divide or Multiply	1.00 - This is a \$ Rate
Step 1: Choice of Rate - If the customer wants to buy \$ - then 63.00 - If the customer wants to sell \$ - then 61.00 Step 2: Divide or Multiply - If the amount is given is \$ - then multiply	1.00 - This is a \$ Rate
Step 1: Choice of Rate - If the customer wants to buy \$ - then 63:00 - If the customer wants to sell \$ - then 61:00 Step 2: Divide or Multiply - If the amount is given is \$ - then multiply - If the amount is given in ₹ - then divide	1.00 - This is a \$ Rate
Step 1: Choice of Rate - If the customer wants to buy \$ - then 63:00 - If the customer wants to sell \$ - then 61:00 Step 2: Divide or Multiply - If the amount is given is \$ - then multiply - If the amount is given in ₹ - then divide	1.00 - This is a \$ Rate
Step 1: Choice of Rate - If the customer wants to buy \$ - then 63:00 - If the customer wants to sell \$ - then 61:00 Step 2: Divide or Multiply - If the amount is given is \$ - then multiply - If the amount is given in ₹ - then divide Question 3:	100 - This is a \$ Rate
Step 1: Choice of Rate - If the customer wants to buy \$ - then 63:00 - If the customer wants to sell \$ - then 61:00 Step 2: Divide or Multiply - If the amount is given is \$ - then multiply - If the amount is given in ₹ - then divide Question 3: Consider the following rates:	100 — This is a \$ Rate
Step 1: Choice of Rate - If the customer wants to buy \$ - then 63.00 - If the customer wants to sell \$ - then 61.00 Step 2: Divide or Multiply - - If the amount is given is \$ - then multiply - If the amount is given in ₹ - then divide Question 3: Consider the following rates: ₹ / £ 82.10 / 82.50	100 - This is a \$ Rate

Step 1 Choice of Rate- If the customer wants to buy \$ - then 63.00- If the customer wants to sell \$ - then 61.00Step 2: Divide or Multiply- If the amount is given is \$ - then multiply- If the amount is given in ₹ - then divideQuestion 3:Consider the following rates:₹ / £ 82.10 / 82.50₹ / \$ 59.75 / 60.15€ / ¥ 0.0093 / 0.0097	ROO - This is a \$ Rate
Step 1 Choice of Rate - If the customer wants to buy \$ - then 63.00 - If the customer wants to sell \$ - then 61.00 Step 2: Divide or Multiply - If the amount is given is \$ - then multiply - If the amount is given in ₹ - then divide Question 3: Consider the following rates: ₹ / £ 82.10 / 82.50 ₹ / \$ 59.75 / 60.15 € / ¥ 0.0093 / 0.0097 i. European firm having surplus funds of Euro 80	.000 – This is a \$ Rate

ca.ankitsarvaiya@gmail.com

[Old & New Scheme]

1

- ii. An Indian student decides to do CFA course. The price of the course is \$ 1,500. How much ₹ is required?
- iii. A US firm exports to India and receives ₹ 42,80,000 and wants to convert ₹ into \$. How much dollar is received?

_

L.	European firm wants to inv	est € 80,000 in Japan.	Parties allow and a
	- It is a European firm	: Home Currency is € — fo	reign Currency is ¥
	- Relevant Rate is	:€/¥0.0093/0.0097	\rightarrow Yen Rate
		Sell Buy	
	- Since the European fir	rm wants to invest in Japan, i	t means that it will either have to:
	a. Sell €, or		
	b. Buy¥		
	- Since the given rate is	a ¥ rate, the European Firm	will have to buy ¥ at € / ¥ 0.0097
	Amount of ¥ required	= € 80,000 (x) ¥	€rate
		=€80,000 (x)¥,	Y € (¹) € (¹)
		<u>= ¥ 82,47,422.68</u>	
и.	Indian Student pays \$ 1,500) for CFA Course	ALL STATISTICS
	- It is an Indian Student	: Home Currency is ₹ — for	reign Currency is \$
	- Relevant Rate is	: ₹ / \$ 59.75 / 60.15.	→ Dollar Rate
		Sell Buy	
	- Since the Indian Stude	nts wants to pay for the CFA	Course, he will have to either:
	a. Buy \$, or		
	b. Sell ₹		
	- Since the given rate is	a \$ rate, the Indian Student	will have to buy \$ at ₹ / \$ 60.15
	/		
	Amount of ₹ required	= \$ 1,500 (x) ₹ / \$	5 rate
		=\$1,500 (x) ₹ / \$	5 60.15
		= ₹ 90,255	
III.	<u>US firm receives ₹ 42,80,0</u>	00 from its exports	
	- It is an US firm	: Home Currency is \$ — fo	reign Currency is ₹
	- Relevant Rate is	: ₹ / \$ 59.75 / 60.15.	ightarrow Dollar Rate
		Sell Buy	
	- Since the US firm rece	eives ₹, it will have to either:	
_			

b. Buy \$	
- Since the rate given to us is a $\$$	rate, the US firm will have to buy \$ @ ₹ / \$ 60.15
Amount of \$ received	= ₹ 42,80,000 (x) \$ / ₹ rate
	= ₹ 42,80,000 (x) \$ / ₹ (¹ / _{60.15})
	<u>= \$ 71,155.44</u>
Explain the concept of "Inverse Rates"	
Given ₹/\$	= X / Y implied = (1 / y) / (1 / x)
Question 4:	
Given ₹ / $$$ 59.75 / 60.15, calculate the ir	mplied \$ / ₹ rates
Solution:	
₹ / \$ 59.75 / 60.15 – This is a \$ rate.	
Therefore, the implied $ I $ rate	= (1/60.15) / (1/59.75)
	= <u>\$ / ₹ 0.016625 / 0.016736</u>
Question 5:	
Calculate the Inverse Rates for the follow	wing quotes:
₹ / \$ 68.50 / 69.25	
₹ / £ 90.5423 / 91.1531	
₹ / CAD 50.5325 / 50.7826	
₹ / SF 68.1675 / 69.1690	
₹ / ¥ 0.615 / 0.620	
₹ / AUD 48.672 / 48.974	
Solution:	
The Inverse Rates for the above quotes	are as follows:
a) <u>₹ / \$ 68.50 / 69.25</u>	
This is a \$ Rate. Thus the ₹ rate sha	all be: $\$ / ₹ \frac{1}{69.25} / \frac{1}{68.50}$
	= \$ / ₹ 0.014440 / 0.014598
b) <u>₹ / £ 90.5423 / 91.1531</u>	
This is a £ Rate. Thus the ₹ rate sha	all be: $f \neq \frac{1}{2\sqrt{2}} / \frac{1}{2\sqrt{2}}$
	$911531 \cdot 90.5423$
THE THE THE TRANSPORT	8 Taladram Prof CA Ankit Samonya Eric Elic E

c) <u>₹</u>	/ CAD 50.5325 / 50.7826		
Т	his is a CAD Rate. Thus the ₹ rate shall be:	CAD / ₹	$\frac{1}{50,7826} / \frac{1}{50,5325}$
			= CAD / ₹ 0.019692 / 0.019789
d) <u>₹</u>	<u>/ SF 68.1675 / 69.1690</u>		
Т	his is a SF Rate. Thus the ₹ rate shall be:	SF / ₹	$\frac{1}{69.1690} / \frac{1}{68.1675}$
			<u>= 5F / ₹ 0.014452 / 0.014670</u>
e) <u>₹</u>	<u>/ ¥ 0.615 / 0.620</u>		
Т	his is a ¥ Rate. Thus the ₹ rate shall be:	¥ / ₹	$\frac{1}{0.620} / \frac{1}{0.615}$
			= ¥ / ₹ 1.612903 / 1.626016
+) <u><</u>	<u>/ AUD 48.0 / 2 / 48.9 / 4</u>

Foreign Exchange Exposure {ForEx} [Old & New Scheme]

Culculate implied			an provide the rollowing quotes
- Bank A	\$ / € 0.9250 / 0.9280		
- Bank B	£ / € 0.6150 / 0.6230		
Solution:			A CONTRACTION OF THE
The rates given t	o us are as follows:		
- Bank A	\$ / € 0.9250 / 0.9280	– This is a € rate	C-ANGA
- Bank B	£ / € 0.6150 / 0.6230	- This is a € rate	
		17	202
Thus, Implied \$ /	£ rate = [\$ / € 0.9250 (x) €	€ / £ ¹ /0.6230] / [\$ / € 0.928	0 (x) € / £ ¹ /0.6150]
	<u>=\$/€1.4848/1.50</u>	89	
Question 8:			
On January 28, 2	015 an importer customer requested a	a bank to remit Singapore D	oollar (SGD) 25,00,000 under an
irrevocable L.C. H	owever due to bank strikes, the bank	could effect the remittance	e only on February 4, 2015. The
interbank market	rates were as follows:		
		January 28, 2015	February 04, 2015
Bombay	\$1	₹ 45.85 / 45.90	₹ 45.92 / 45.97
London	£1	\$ 1.7840 / 1.7850	\$ 1.7765 / 1.7775
	£1	SGD 3.1575 / 3.1590	5GD 3.1380 / 3.1390
The bank wishes	to retain an exchange margin of 0.125	5%. How much does the cust	comer stand to gain or lose due
to the delay? (Cal	culate the rate in multiples of 0.0001)		1
Solution:			
An importer has s	5GD 25,00,000 payable. (i.e. FC Payabl	e)	
- \$ and £ are t	he common currencies given to us to	calculate the cross rates.	
- Thus, it impli	es that the importer is an Indian Impo	rter.	T
•			
Home Currency =	₹, Foreign Currency = £, \$, SGD		
ď			
So, the Indian imm	oorter has 2 available Alternatives:		
a. Buy SGD or	4		
a. Buy SGD, or b. Sell ₹			
a. Buy SGD, or b. Sell ₹			
a. Buy SGD, or b. Sell ₹			
a. Buy SGD, or b. Sell ₹			

Calculation of the ₹ / S	GD Implied Rate:
--------------------------	------------------

₹		₹		\$		£
5GD	=	\$	X	£	X	SGD

The question has given us the following quotes:

- ₹/\$ (in Bombay)
- \$/£(in London)
- SGD / £ (in London)

Thus, the implied ₹ / SGD rate is:

January 28, 2015	February 04, 2015
$\frac{\overline{2}}{56D_{bld}} = \frac{\overline{2}}{\$} 45.85 \text{ x} \frac{\$}{1} 17840 \text{ x} \frac{1}{56D} \frac{1}{3.1590}$	$\frac{\tilde{\xi}}{\text{SGD}_{\text{bld}}} = \frac{\tilde{\xi}}{\$} 45.92 \text{ x } \frac{\$}{\texttt{E}} 1.7765 \text{ x } \frac{\texttt{E}}{\text{SGD}} \frac{1}{3.1390}$
= ₹ / SGD 25.8931 (Customer Sell Rate)	= ₹ / 5GD 25.9882 (Customer Sell Rate)
$\frac{\xi}{56D_{ask}} = \frac{\xi}{5} 45.90 \text{ x} \frac{\xi}{1.7850 \text{ x}} \frac{\xi}{56D} \frac{1}{3.1575}$	$\frac{\tilde{\tau}}{56D_{ask}} = \frac{\tilde{\tau}}{5} 45.97 \text{ x } \frac{\$}{1} 17775 \text{ x } \frac{\varepsilon}{56D} \frac{1}{3,1380}$
= ₹ / SGD 25.9482 (Clistomer Bilv Rate)	= ₹ / SGD 26 0394 (Customer Buy Pate)
- 1 JOU 2J. JTOZ (SUJIONEL DUY RULE)	

Since the calculated implied rate is a SGD Rate, and the Indian Importer has to buy SGD, the applicable rate on:

- January 28, 2015 = ₹ / SGD 25.9482

- February 04, 2015 = ₹ / SGD 26.0394

Thus, the effective purchase price per \$ for the Indian Importer = Rate (+) Exchange Margin

- January 28, 2015 = ₹ / SGD 25.9482 (+) 0.125% = ₹ / SGD 25.9807

Thus, the loss due to delay = 5GD 25,00,000 (x) $\frac{R}{56D}$ [26.0720 (-) 25.9807]

= ₹ 2,28,269

Question 9:

On September 27, 2018 an importer customer requested a bank to remit Singapore Dollar (SGD) 3,50,000 under

an irrevocable L.C. However due to bank strikes, the bank could effect the remittance only on September 30, 2018.

The interbank market rates were as follows:

CA Ankit Sarvaiya ca.ankitsarvaiya@gmail.com FB & Telegram: Prof. CA Ankit Sarvaiya

		September 27, 2018	September 30, 2018
Bombay	\$1	₹ 65.75 / 66.15	₹ 66.05 / 66.75
London	£1	\$ 1.6850 / 1.6900	\$ 1.6765 / 1.6775
	£ 1	56D 3.2000 / 3.2150	SGD 3.2075 / 3.2175
The bank wishes to	retain an exchange margin of 0.1	150%. How much does the custo	omer stand to gain or lose due
to the delay? (Calcu	late the rate in multiples of 0.000	01)	
			-7.
Solution:)(()
An importer has SG	5D 3,50,000 payable. (i.e. FC Payat	ble)	
- \$ and £ are the	e common currencies given to us	to calculate the cross rates.	
- Thus, it implies	that the importer is an Indian Im	porter.	
Home Currency = ₹	, Foreign Currency = £, \$, SGD		
So, the Indian impo	rter has 2 available Alternatives:		
c. Buy SGD, or			
d. Sell₹			
		11100	
Calculation of the ₹	/ SGD Implied Rate:	C X	
	₹	$\frac{3}{2} \times \frac{5}{2} \times \frac{2}{100}$	CERNERIC
T I	SGD	\$ E SGD	
The question has g	iven us the following quotes:		5
$ \langle / \Rightarrow (III DOIMDO$	y)		, //
$ \Rightarrow$ / \pm (in Londo	adon)		
- JOD / E (In Loi Thus the implied ₹	/ SGD rate is:	'	/
			20.220
	Deptember 27, 2018	Septemb	oer 30, 2018
$\frac{\overline{2}}{SGD_{bid}} = \frac{\overline{2}}{5} 65.75$	$\frac{1}{16850} \times \frac{1}{50} = \frac{1}{3.2150}$	$\frac{3}{\text{SGD}_{\text{bld}}} = \frac{3}{5} 66.05 \text{ x} \frac{5}{5} 1.67$	$65 x \frac{f}{SGD} \frac{1}{3.2175}$
= 7 / SCD 2/1/160	(Customor Soll Data)	- 7 / SCD 2/1/1/EQ (Curcha	mar Sall Data)
- 1 7 200 34.400		<u>- < / JUJ 34.4108 (UUSTO</u>	mer Jeli Kalej
7 7	$\frac{1}{2}$ 1.6900 x $\frac{1}{660}$ $\frac{1}{20000}$	$\frac{3}{5GD_{ask}} = \frac{3}{5} 66.75 \text{ x} \frac{1}{2} 1.67$	$75 \times \frac{\text{f}}{\text{SGD}} \frac{1}{3.2075}$
$\frac{1}{5GD_{ask}} = \frac{1}{5} 66.15 x$	E 5GD 3.2000		
$\frac{x}{\text{SGD}_{ask}} = \frac{x}{\$} 66.15 \text{ x}$	E 5GD 3.2000		
$\frac{1}{SGD_{ask}} = \frac{1}{\$} 66.15 x$			an ar Auu Detel

<u># Triangular Arbitrage (a.k.a.</u>	Three Way Arbitrage)	Y.
As the name suggests, <mark>triangul</mark>	ar arbitrage involves 3 currencies and 3 banks. Start by selling one currenc	y and
pass through the other 2 curre	ncles and get back to the currency we started with.	<u> </u>
If we end up with more money th	nan we started with, there is an arbitrage profit. The rules of arbitrage as discu	issed
in 2-way arbitrage will still hold	true.	
for instance, if the question p	rovides us with 3 currencies, say \$, $ ilde{}$ and £, then we can start with £ and end	l with
£. The 2 paths in such case wo	uld be:	
- £ – \$ – ₹ – £, or)
- £-₹-\$-£		
Question 10:		
followings are the spot exchan	ge rates quoted at three different forex markets:	
- ₹/\$48.30	in Mumbai	
- ₹/GBP 77.52	in London	
- \$ / GBP 16231	in New York	
The arbitrageur has USD 1000	0.000 Assuming that there are no transaction costs explain whether there is	s anv
arbitrage gain possible from th	ne outed spot exchange rates	Jany
a see age goer possible it off t		
Solution:		
Since the arbitrageur has \$ 10	0.00.000 we shall start with \$. The two possible paths are:	
i. Path (i) \$ - ₹ - GBP - 4		-
$\begin{array}{c} \text{II} \text{Path}(i) \\ \text{II} \text{Path}(ii) \\ \text{CRD} = \overline{\mathcal{F}} = 0 \\ \end{array}$	۲ ج	
$\frac{1}{2}$	*	

a) Path 1: $\$ \rightarrow ₹ \rightarrow GBP \rightarrow \$$		
\$ receivable after arbitrage	=\$1,00,00,000 (x) ₹/\$48.30 (x) £/₹	¹ / ₇₇₅₂ (x) \$/£ 1.6231
	= \$ 1,01,12,968.26	1911200
		CL STUP BILL
Arbitrage Profit	= \$ 1,01,12,968.26 (-) \$ 1,00,0	0,000
	= \$ 1,12,968.26	
	(F	
b) Path 2: $\$ \rightarrow GBP \rightarrow \$ \rightarrow \$$		
Since path (i) has already sho	own us a profit, we need not check path	(ii)
Explain the concept of Telegra	phic Transfer (TT) Buy and Sell Com	mission
Bank charges commission on its t	buying and selling rates. <mark>One has to rem</mark>	ember that these rates are given by ban
So, the buy commission should be a	applied on the Bank BUY (i.e. BID) Rate a	nd the Selling commission should be applied
to Bank SELL (i.e. ASK) Rate.		
However, while adding and sub	tracting the commission, one has to	think from customer's point of view
Question 11:		CARDADO ALL
The given interbank quote is ₹ / 9	\$ 52.10 / 52.70. TT Buying commission	is 0.20%. TT Selling commission is 0.25
	the TT colling rate

<mark>future.</mark> The Forward e.	exchange rate is set and agreed	d by the parties and remains fi	xed for the contract period
regardless of the fluc	ctuations in the spot exchange	rates in future.	-90G-
Both Spot	Exchange Rate and For	ward Exchange Rate are	known TODAY
- Forward Premium	/ Forward Discount:		- And
a. If the forwar	rd rate of a currency > Spot ra	ate of that currency, then that	currency is said to be at a
premium			201
For eg, ₹ / \$	Spot Rate is 60.20 and ₹/ ٩	5 2 month Forward Rate is 62	2.15 — The rate is a \$ rate,
and \$ is at a	premium		
b. If the forwar	rd rate of a currency < Spot ra	ate of that currency, then that	currency is said to be at a
discount			
For eg, ₹ / \$	Spot Rate is 60.20 and ₹ / \$	2 month Forward Rate is 58	64 — The rate is a \$ rate,
and \$ is at a	discount		
When a \$ rate is prov	vided to us, then the formula	to calculate (assume a ₹/\$	quote) Forward Premium /
Discount on:			JANS BILL
$- \$ = \frac{f-s}{x}$	100 x ^{12/52/365}		
	n 12/52/365		E
- ₹ = 5 x1	$100 \times \frac{127527505}{n}$		
Remember, if	\$ is at a premium, then	₹ is at a discount, but N	OT by the same %
/			
Question 12:			
From the following data, ca	alculate the annualized forward	d premium / discount on each	currency
- Spot Rate	: € / £ 1.3450		
- 2 month forward rate	: € / £ 1.3410		
	Ì		
Solution:			
- Spot Rate	: € / £ 1.3450	— This is a £ Rate	
- 2 month forward rate	: € / £ 1.3410	— This is a £ Rate	
	1		
Since the Forward rate <	Spot Rate, £ is at a discount l	(i.e. € is at a premium. but not	by the same %)
	/		

$=\frac{1}{5} \times 100 \times \frac{1}{100}$	
$=\frac{1.3410-1.3450}{100} \times 100 \times \frac{12}{10} = 100$	1.7844 % p.a.
1.3450 2	
b) Annualised Forward Premium on	€
$=\frac{5-f}{f} \times 100 \times \frac{12/52/365}{n}$	
$=\frac{1.3450-1.3410}{x} \times 100 \times \frac{12}{x}$	17897 % pa
1.3410 2	
Question 13:	
from the following data, calculate the	e annualized forward premium / discount on each currency
- Spot Rate	:₹/\$66.80
- 3 month forward rate	:₹/\$67.35
Solution:	
- Spot Rate	: ₹ / \$ 66.80 — This is a \$ Rate
- 3 month forward rate	: ₹ / \$ 67.35 — This is a \$ Rate
a) Annualised Forward Premium on	\$
a) <u>Annualised Forward Premium on</u>	5
$=\frac{f-5}{5} \times 100 \times \frac{12/52/365}{n}$	
$=\frac{67.35-66.80}{466.80} \times 100 \times \frac{12}{2}$	3.2934 % p.a.
100.00 3	
b) Annualised Forward Premium on	₹
$-5-f \times 100 \times \frac{12}{52/365}$	
$= \frac{60.00 - 07.35}{67.35} \times 100 \times \frac{12}{3} = \frac{10}{3}$	<u>3.2665 % p.a.</u>
	· · · · · · · · · · · · · · · · · · ·
Question 14:	
The 3 month forward rate is \$ / £ 1.	.5865. Annualised Forward Premium on \$ against £:
- Based on 3 month forward rate	- 7%
- Based on 6 month forward rate	- 9%
Calculate the 6 month forward rate.	

a)	Determination of Spot Rate
-•	3 month forward rate $-$ \$ / £ 1.5865 \rightarrow £ Rate
	\$ is at a Premium against f
	p b de d i reintain agatibe 2.
	Thus, \$ Premium = $\frac{5-f}{c} \times 100 \times \frac{12/52/365}{c}$
	5 - 15865 + 100 + 12
	1.e. $f_{.00} = \frac{15865}{15865} \times 100 \times \frac{1}{3}$
	Thus, Spot Rate = <u>\$ / £ 1.6143</u>
Ь)	Determination of 6 month Forward Rate
	Spot Rate = $ \pm 1.6143 $ $\rightarrow \pm Rate $
	\$ is at a Premium against £.
	Thus f Ourseling 5-f , 100 , 12/52/365
	Thus, \Rightarrow Premium = $\frac{1}{f} \times 100 \times \frac{1}{n}$
	$12 = 0.00 = \frac{16143 - 6 \text{ month f}}{12} \times 100 \times 12$
	$\frac{1}{6} \text{ month } F = \frac{1}{6} \text{ month } F$
	Thus, 6 month Forward Rate = $\frac{5}{215448}$
<u>£x</u>	plain the concept of "Swap Points"
Sw	ap rate is the difference between the spot rates and the forward rates.
Sw	ap Points are movement in Exchange Rate expressed in absolute terms, i.e. in value Terms. Given the swap rates
and	d swap points, we have to find the forward rates.
-	If the swap points are 45 / 58 (i.e. Low / High), it represents premium and thus, we should add them to the
	spot rate
-	If the swap points are 55 / 47 (i.e. High / Low), it represents discount and thus, we should subtract them from
	the spot rate
<u>Ex</u>	plain the concept of "Price Interest Points (PIPs)"
Pri	ce Interest Point (PIPs) is the smallest unit by which a currency quotation can change. PIP in foreign currency
quo	ptation is similar to the tick size in share guotations. However, in Indian interbank market, ₹/\$ rate is guoted
	to 4 decimal points. Hence minimum value change will be to the tune of 0.0001.

f	Forward Rate For 2 months 15 days	₹ / \$ 64.045 / 65.260

Explain "Covered Hedge and Uncovered Hedge"

If funds to fulfill the contract are **available on hand or are due to be received** by the business, the hedge is considered to be **'covered**'.

In situations where Funds to fulfill the contract are **not available but have to be purchased in the spot market at some future date**, then such a hedge is known as **'uncovered**'.

Explain "Forward Cover"

Foreign Trade is subject to risk of foreign exchange rate differences. We can hed<mark>ge the</mark> exposure by various

methods. Forward exchange contracts are used to hedge against the adverse movement in exchange rates.

Entering into the forward market with a view to safeguard one's existing exposure (i.e. exposure of fC Receivable or fC Payable), is known as *Hedging*

for example:

An exporter in India exports shirts to USA. He manufactures one shirt for \gtrless 190 and quotes it for \$ 4 per shirt, when the exchange rate is \gtrless / \$ 60.00. He expects to make a profit of \gtrless 50 per shirt. However, the client has asked for a credit period of 4 months.

CA Ankit Sarvaiya ca.ankitsarvaiya@gmail.com FB & Telegram: Prof. CA Ankit Sarvaiya

Now what can happen after 4 months is that the rates can fall and his expected profit may be reduced or even worse, be nullified. So what he can do is, he can fix the exchange rate TODAY by entering into the forward market and make an agreement with the bank to sell \$'s 4 months from now at the rate decided today.

The Bank may quote a forward rate — that is **HIGHER / LOWER to the spot rate**, depending upon the forward premium / discount.

Let us say that the bank quotes ₹ / \$ at 59. This will reduce the exporter's profit from ₹ 50 per shirt to ₹ 46 per shirt. *However, this will be the final profit*. Any further reduction will not be applicable to him. He is now protected from any further fluctuations.

Explain the possible exposure Sce	nario's and Strategies to adopt thereunder.
Scenario	Fear Strategy to adopt
FC Recelvable	Rates will FALL SELL FC Forward
FC Payable	Rates will RISE BUY FC Forward

Write a note on Non-deliverable Forward Contract (NDFs)

A Non-Deliverable Forward Contract is a cash-settled, short-term Forward contract on a thinly traded or nonconvertible foreign currency. The profit or loss at the time at the settlement date is calculated by taking the difference between the agreed upon exchange rate and the sport rate at the time of settlement, for an agreed upon notional amount of funds.

All NDFs have a fixing date and a settlement date. The fixing date is the **date** at which the difference between the prevailing market exchange rate and the agreed upon exchange rate is calculated. The settlement date is the date by which the payment of the difference is due to the party receiving payment.

NDFs are commonly quoted for time periods of one month up to one year, and are **normally quoted and settled in U.S. dollars**. They have become a popular instrument for corporations seeking to hedge exposure to foreign currencies that are not internationally traded.

Question 18:

A US firm has \leq 140,000 receivable after 6 months. The spot rate is \$/ \leq 1.0427. The six months' forward rate quoted by the bank is \$/ \leq 1.0527. How can the US firm hedge its exposure?

Solution:

The firm is a US firm. Thus, Home Currency = \$ and Foreign Currency = €.

CA Ankit Sarvaiya ca.ankitsarvaiya@gmail.com FB & Telegram: Prof. CA Ankit Sarvaiya

	The US firm has $6.1/10.000$ Deceivable after 6 months. Thus, the fear in the minds of the US firm is that the
ľ	rates in the future will Fall .
	Accordingly the US (irm chall SC)) CC (i.e. 6) Converded to the 6 menth $4/6$ (orward Date
	Accordingly, the do firm shall bell for (i.e. e) for ward at the o month \$7 e for ward Rate
	Thus, the applicable rate is $\mathfrak{P} \neq \mathbb{I} \cup \mathfrak{S} \mathfrak{Z} \mathfrak{P}$
	Thus accordingly the Amount Deceivable (in \$) by the US firm under Forward Cover after 6 months shall be
	$= \frac{1}{12238}$
	<u>- p (47,570</u>
(Question 19:
2	An Indian firm has \$ 5,00,000 payable after 4 months. The spot rate is ₹/\$ 67.75 / 68.35 The four months'
4	Forward rate quoted by the bank is $\frac{2}{5}$, 6750 / 6780. How can the Indian firm hedge its exposure? Is the
	decision to take Convert cover justified if the spot rate at the end of μ months is $3/4$ 6382
(decision to take for ward cover justified in the spot rate at the end of A months is V \$ 07.65
	Sahitian
	The firm is an Indian firm. Thus, Home Currency = \exists and foreign Currency = b .
	The Indian Firm has \$ 5,00,000 Pavable after 4 months. Thus, the fear in the minds of the Indian firm is that
	the rates in the future will rise
	Accordingly, the Indian firm shall BLIV SC (i.e. \$) Forward at the 4 month \neq (\$ Forward Date
	Thus the applicable rate is $\neq / 4.6780$
	Thus, the applicable rate is (7 \$ 07.80
	Thus accordingly the Amount Pavable (in ₹) by the Indian firm under forward Cover after 4 months shall be
	= $$500,000 (x) \neq ($6780)$
	- ₹ 32000000
	- (3,39,00,000
ſ	Determination of Tustification of Forward Cover
	\neq Davable is converted cover is undertaken $= \neq 220.000000$ (computed above)
	$= \frac{2}{3}$
	-2 Payable (F Forward Cover is not under taken - $33,00,000$ (x) (x) 507.85 - $3,39,13,000$
-	Thus, Loss = ₹ 3,39,15,000 (-) ₹ 3,39,00,000 = ₹ 15,000
(Conclusion:
-	The decision to take forward cover by the Indian firm is justified.

Que	<u>25tion 20:</u>		
In S	beptember, 1998, Multinati	onal Industries Inc. a	assessed March, 1999 spot rate for pound sterling at the following
rate	25:		
\rightarrow	\$ 1.30/£ with probability	y 0.15	
\rightarrow	\$ 1.35/£ with probability	y 0.20	
\rightarrow	\$ 1.40/£ with probability	y 0.25	
\rightarrow	\$ 1.45/£ with probability	y 0.20	
\rightarrow	\$ 1.50/£ with probability	y 0.20	
Уou	are required to:		
1.	Calculate the expected s	spot rate for March,	1999?
2.	If the six-month forwa	rd rate is \$ 1.40, sh	nould the firm sell forward its £ 1,000 receivables due in March
	1999?		
<u>Solı</u>	<u>ition:</u>		
a.	Calculation of Expected	Spot Rate in March 1	1999
	\$ / £ Rate	Probability	Probable Rate
	1.30	0.15	0.1950
	1.35	0.20	0.2700
	1.40	0.25	0.3500
	1.45	0.20	0.2900
	1.50	0.20	0.3000
	Expected	Spot	14050
D.	Advise		
	As the Expected Spot R	ate (i.e. \$ / £ 1.4050)) > 6 month forward Rate (\$ / £ 1.4000), it is financially advised
	to not undertake forwa	ard cover. However	from a risk free perspective, it is advisable to go ahead with
	Forward Cover.

to which the forward co	ntracts are initially entered may be cancelled. Hence the forward contract shall also be
required to be cancelled.	
Cancellation involves a rev	verse contract. One should remember that the contract for reversal should fall on the same
day when it is supposed t	to be executed
<u>For Example:</u>	
On 01/01/2018 Mr. AS ent	tered into a 3 month forward contract for the purchase of 100,000. It means that the
transaction was due on C	01/04/2018. Now, if he wants to cancel the contract on
- <u>01/02/2018:</u>	
Then he must enter i	into a <i>2 month Forward</i> sell contract so that the sell coincides on 01/04/2018
- <u>01/03/2018:</u>	
Then he must enter i	into a <i>1 month Forward</i> sell contract so that the sell coincides on 01/04/2018
- <u>01/04/2018:</u>	
Then he must enter i	into a chartcall contract so that the call coincides on $01/0/1/2019$

This implies, that the importer forward Contract, which involves the following two steps he current rate of exchange. 2 Amount ₹/\$40.4800	

(–) Bank Buy Commission @ 0.080%	₹ / \$ (0.0324)
Effective Selling Rate for the Importer	₹/\$40.4476
Thus, (Profit) / Loss on Cancellation to the Importer shall be:	
- Amount payable on Purchase of Contract [₹ / \$ 41.87]	₹ 4,18,700
- Amount receivable on Sale of Contract [₹ / \$ 40.4476]	₹ (4,04,476)
Thus, Loss on Cancellation	₹ 14,224

Thus, The total loss (net of FEDAI Charges)

= ₹ 14,224 (+) ₹ 100 (FEDAI Charges) = **₹ 14,324**

Step 2: New contract to be booked at the appropriate Forward rate. Particulars Amount Spot Rate [Customer Buy Rate] ₹/\$ 40.4900 (+) September Premium ₹/\$ 0.3750 Effective 3 month forward Buy Rate for the Importer ₹/\$ 40.8650 (+) Bank Selling Commission @ 0.25% ₹/\$ 0.1022 Thus, the effective 3 month forward Customer Buy Rate ₹/\$ 40.9672

Question 24:

An exporter requests his bank to extend the forward contract for \$ 20,000 which is due for maturity on 31st October, 2014, for a further period of 3 months. He agrees to pay the required margin money for such extension of the contract.

Contracted Rate: 1\$ = ₹ 62.32

The US Dollar quoted	on 31–10–2014 as:	
Spot	1\$ = ₹ 61.5000 / 61.52	00
3 months' Discount	0.93% / 0.87%	

Margin money from bank's point of view for buying and selling rate is 0.45% and 0.20% respectively.

You are required to compute:

1] The cost to the importer in respect of the extension of the forward contract, and

2) The rate of new forward contract.

CA Ankit Sarvaiya ca.ankitsarvaiya@gmail.com FB & Telegram: Prof. CA Ankit Sarvaiya

Solution:	
You have entered into a forward buy contract with the exporter (i.e. Custor	ner).
This implies, that the exporter has entered into a Forward sell contract.	Alter
The exporter has approached you for the extension of forward Contract, v	which involves the following two step
nvolves following steps:	
Step 1: Cancel the contract at Customer Buy Rate.	
Step 2: Rebook the contract for three months at the current rate of a	exchange.
Step 1: Cancel the contract at Customer Buy on 31.10.2014	
Particulars	Amount
Spot Rate	₹/\$615200
(+) Margin Money @ 0.20%	₹/\$0.1230
Effective Buying Rate for the Exporter	₹/\$616430
Thus, (Profit) / Loss on Cancellation to the Exporter shall be:	Hammen 11
- Amount payable on Purchase of Contract [₹/\$61.6430]	₹ 12,32,861
- Amount receivable on Sale of Contract [₹ / \$ 62.3200]	₹ (12,46,400)

Thus, The total profit (net of FEDAI Charges)

= ₹ 13,539 (-) ₹ 100 (FEDAI Charges)

<u>= ₹ 13,439</u>

<u>Step 2: New contract to be booked at the appropriate for</u>	<u>Step 2: New contract to be booked at the appropriate forward rate.</u>					
Particulars	Amount					
Spot Rate [Customer Sell Rate]	₹/\$61.5000					
(-) Discount @ 0.93%	₹ / \$ (0.5720)					
Effective 3 month forward Sell Rate for the Exporter	₹ / \$ 60.9280					
(-) Margin Money @ 0.45%	₹ / \$ (0.2742)					
Thus, the effective 3 month forward Customer Sell Rate	₹ / \$ 60.6538					

Question 25: BC Export Co are holding an Export bill in United States Dollar (USD) 1,00,000 due 60 days hence. Rate at which deal was finalized was ₹ 47.50 per USD. The Company is worried about the fluctuating exchange rate. The firm's

Explain the "Strategies for Exposure Management" of Forward Contracts

	REWARD		
	LOW	HIGH	
	This option involves automatic hedging of	This strategy requires selective hedging of	
	exposures in the Forward market as soon as	exposures whenever forward rates are attractive but	
	they arise, irrespective of the	keeping exposures open whenever they are not. This	
M	attractiveness or otherwise of the forward	option is similar to an investment strategy of a	
-	rate.	combination of bonds and equities with the	
×		proportion of the two components depending on the	
RIS		attractiveness of prices.	
	Perhaps the worst strategy is to leave all	This strategy involves active trading in the currency	
	exposures unhedged . The risk of	market through continuous cancellations and	
IGH	destabilization of cash flows is very high/	rebooking's of forward contracts.	
	The merit is zero investment of managerial		
	time or effort.	P,	

Question 28:

Place the following strategies by different persons in the Exposure Management Strategies Matrix.

Strategy 1

Kuljeet a wholesaler of imported items imports toys from China to sell them in the domestic market to retailers. Being a sole trader, he is always so much involved in the promotion of his trade in domestic market and negotiation with foreign supplier that he never pays attention to hedge his payable in foreign currency and leaves his position unhedged.

Strategy 2:

Moni, is in the business of exporting and importing brasswares to USA and European countries. In order to capture the market he invoices the customers in their home currency. Lavi enters into forward contracts to sell the foreign exchange only if he expects some profit out of it other-wise he leaves his position open.

<u>Strategy 3:</u>

TSC Ltd. is in the business of software development. The company has both receivables and payables in foreign currency. The Treasury Manager of TSC Ltd. not only enters into Forward contracts to hedge the exposure but carries out cancellation and extension of Forward contracts on regular basis to earn profit out of the same. As a result management has started looking Treasury Department as Profit Centre.

Syplain the Interest Di	te Parity (IDD) Theory	
As par this theory the a	rebando rato between currencier	. Is directly accepted by their interact rate diccorentials
As per unis meary, the e	condrige rate between currencies	s is directly affected by their interest rate differentials.
As per this theory, in a f	ree and efficient market, cover	ed thterest arbitrage is not possible. That means no one
can gain from the differ	ence in interest rates in differ	ent countries. No one can borrow from one country and
. Ankit Sarvaiya 📃	FB& Telegram: Pro	f. CA Anklt Sarvaiya Foreign Exchange Exposure {ForE
		E de la

invest the same in other country and earn profit. It will be negated by difference between the exchange rate in the spot market and forward market.

for example:

Consider a situation where interest rate in India happens to 10% and interest rate in US is 4% respectively. Spot rate is $\gtrless / \$$ 60.

Suppose we borrow \$ 1,000 for 1 year from US, then the amount payable shall be 1,000 (x) 104 = \$ 1040. \$ 1,000 which is borrowed, is brought to India at a spot rate of ₹ / \$ 60. That gets him, ₹ 60,000 and he invests the same in India For a year @10%. The amount receivable would be ₹ 60,000 (x) 1.10 = ₹ 66,000. So, after the year when the person goes back to repay the loan in US the forward rate will be such that he shall not be in the position to earn Profit.

1 year forward rate under covered IRP would be $₹ / $ ^{66,000} / _{1040} = ₹ / $ 63,4615, which cuts any possibility of profit.$

Remember that, the country who's interest rate is lower, has its currency at a premium

 $\frac{f}{S} = \frac{1 + i_A}{1 + i_B}$

The IRP Equation is:

Remember, in case of a \mathbf{E} / \mathbf{F} rate, i_A means the \mathbf{E} Interest Rate, and i_B means the \mathbf{F} interest rate (Denominator is the interest rate of the currency whose rate is given)

Question 29:

The United States Dollar is selling in India at ₹ 45.50. If the interest rate for a 6 month borrowing in India is 8%

per annum and the corresponding rate in USA is 2% per annum;

1. Do you expect United States Dollar to be at a premium or at discount in the Indian Forward market?

2. What is the expected 6 month forward rate for United States Dollar in India?

Solution:

1. Since the interest rate in US is lower as compared to India, \$ is at a premium to the Rupee

2. As per the IRP Theory, the 6 month forward rate for \$ in India shall be:

 $\frac{f}{S} = \frac{1 + i_A}{1 + i_B}$

Thus,

Foreign Exchange Exposure {ForEx} nissible | [Old & New Scheme]

1

Alternatively, if the market comes back together before December 15, the dealer could unwind his position (by
simultaneously buying \in 62,500 forward and selling a futures contract. Both for delivery on December 15, and
earn the same profit of \$ 62.50.

Question 31:

On April 1, 3 months interest rate in the UK £ and US \$ are 7.5% and 3.5% per annum respectively. The UK £/US \$ spot rate is 0.7570. What would be the forward rate for US \$ for delivery on 30th June ?

Solution:

£ / \$ Spot Rate	0.7570
£ Interest Rate (iA)	7.50% p.a.
\$ Interest Rate (i _B)	3.50% p.a.

3 month Forward Rate, based on IRP shall be:

F		1	+	ίA
—	=	-		
~				

5 1+i_B

Thus,

3 month f	1+0.01875 [i.e. 0.0750 (x) ^{3 m} / _{12 m}]
£/\$0.7570	1+0.00875 [i.e. 0.0350 (x) ^{3 m} / _{12 m}]

Thus, 3 month forward rate <u>= £ / \$ 0.7645</u>

Question 32:

If the interest rate for the next 6 months for the US\$ is 1.5% (annual compounding). The interest rate for the € is 2% (annual compounding). The spot price of the € is US \$ 1.665. The forward price is expected to be US\$ 1.664. You are required to determine the correct forward price and recommend an arbitrage strategy.

Solution:		1	
\$ / € Spot Rat <i>e</i>	1.6650		
\$ / € 6 months' Forward Rate	1.6650		
\$ Interest Rate (i _A)	1.50% for 6 months		
€ Interest Rate (iß)	2.00% for 6 months		-
6 month Forward Rate, based o	n IRP shall be:		
$f = \frac{1 + i_A}{2}$			
S 1+i _B

	<i>† 1 <i>c</i> 1 <i>c c c c c c c c c c</i></i>			
Thus, 6 month Forward rate	=\$/€1.6568			
			2 Julie	
Strategy for Arbitrage:		59	all a	Sall 2
Because the Actual Forward Price	is <u>higher</u> than the Th	eoretical Forward Pri	ce, we will sell the for	ward contract.
If transaction costs could be cov	ered, we would buy the	e € in the spot marke	t at \$1.665 and sell (1	t in the forward
market at \$1.664. We would earn i	nterest at the foreign	interest rate of 2 pe	rcent. By selling it fo	orward, we could
then convert back to dollars at t	he rate of \$1.664. In a	other words, \$1.665 i	rould be used to buy	1 unit of the €,
which would grow to 1.02 units (1	the 2 percent € rate)). Then 1.02 € would t	e converted back to	o 1.02(\$1.664) =
\$1.69728. This would be a return	of (^{\$ 1.69 + 28} / _{\$ 1.6650}) - 1	1 = 0.019387 or 1.94 p	ercent, which is bet	ter than the US
rate.				- 7/D

<u>= 1.9139% p.a.</u>

IRP Arbitrage involves 4 steps:

Step	What to do?
1	Borrow and Calculate the amount payable on maturity
2	Convert to another currency at SPOT rate
3	Invest and calculate the amount receivable
4	Convert the amount receivable back into home currency & calculate the profit (loss)

Question 34:

Consider the following information:

Exchange rate

- Canadian Dollar 0.665 per DM (Spot)
- Canadian Dollar 0.670 per DM (3 months forward)

<u>Interest rates</u>

- DM 7% p.a.
- Canadian Dollar 9% p.a.

What operations should be carried out to earn the possible arbitrage gains?

Solution:

The rates given to us are as follows:

- Spot Rate
- CD / DM 0.665 It is a DM rate
- 3 months forward
- CD / DM 0.670 It is a DM rate

Accordingly,

 i_A – CD Interest Rate – 9% p.a. – 2.25% for 3 months

 $\iota_{B}-DM$ Interest Rate - 7% p.a. - 1.75% for 3 months

The two possible paths to arbitrage are:

- i. Borrow Canadian Dollar (It is assumed that CD 10,000 are borrowed)
- ii. Borrow Deutsche Mark (It is assumed that DM 10,000 are borrowed)

Arbitrage opportunity Analysis

Path 1: Borrow Canadian Dollar (It is assumed that CD 10,000 are borrowed)

CA Ankit Sarvaiya ca.ankitsarvaiya@gmail.com FB & Telegram: Prof. CA Ankit Sarvaiya

St	tep	Description	Calculation
	1	Borrow and Calculate the amount	Amount payable = CD 10,000 (x) 1.0225
		payable on maturity	= CD 10,225
-	2	Convert to another currency at	Amount received = CD 10,000 (x) DM / CD $^{1}/_{0.665}$
		SPOT rate	= DM 15.037.59
	3	Invest and calculate the amount	Amount receivable = DM 15,037.59 (x) 1.0175
		receivable	<u>= DM 15,300.75</u>
L	4	Convert the amount receivable	Sell 15,300.75 DM @ 3 m CD / DM Forward Rate.
		back into home currency and	Amount Receivable = DM 15,300.75 (x) CD / DM 0.670
		calculate the profit / (loss)	= CD 10,251.50

Arbitrage Profit = CD 10,251.50 (-) CD 10,225.00 = CD 26.50

Path 2: Borrow Deutsche Mark (It is assumed that DM 10,000 are borrowed)

Since we have reached profit in path (1) itself, we need perform calculations on path (2)

Explain the Process of "Hedging" under IRP Theory (a.k.a. Money Market Cover - MMC)

Hedging is undertaken with a view to safeguard its exposure. We have earlier discussed forward cover as a tool to safeguard oneself against foreign currency exposure. Now the knowledge of IRP has helped us to establish the relationship between f, S, iA and iB.

Now, instead of using f we can hedge ourselves by using S, iA, and iB. This is known as money market cover.

Money Market Cover uses Spot and interest rates of two countries. For MMC, remember — step 1 is always to CUT the exposure

Explain the various Scenario's, and Strategies to adopt in MMC

Sr.	Scenario	Strategy	Logic
1	FC Receivable	Borrow \rightarrow Sell \rightarrow Invest	We have FC receivable — we have to cut the
			exposure — for which — we need to take a payable
			position — thus, borrow .
			9
			Once we borrow, we shall have FC, which we shall
			sell and buy HC, which will be invested to get HC at
			its due date

CA Ankit Sarvaiya ca.ankitsarvaiya@gmail.com FB & Telegram: Prof. CA Ankit Sarvaiya

Foreign Exchange Exposure {ForEx} [Old & New Scheme]

	rc Payable	Invest \rightarrow Buy \rightarrow Borrow	We have FC pay	able — we have to cut the exposure
			— For which -	— we need to take a receivable
			position — thus	5, invest.
				1962
			To invest, we wi	ill have to buy FC through HC, which
			we have to borr	row.

	Borrow \in = Buy \in £. Thus, the relevant interest rate = 4%		
	p.a. = 2 % for 6 months		
2	Sell € 88,235.29 at Spot Rate	= € 88,235.29 (x) £ / € 0.6515	
	Relevant rate – £ / € Spot 0.6515 / 0.6527.	= £ 57,485.29	
	∴ Sell € at £ / € 0.6515	CLAND AND	
3	Invest £ 57,485.29 for 6 months	= £ 57,485.29 (x) 1.0150	5
	Relevant Interest Rate – £ Rate	<u>= £ 59,497.28</u>	
	Invest $\mathbf{E} = \mathbf{Sell} \mathbf{E}$. Thus, the relevant interest rate = 7% p.a. =	- 7.4	7
	3.50 % For 6 months	~	115

Conclusion: Go for Money Market Cover (as it results in higher inflow of £)

Question 38:

Columbus Surgicals Inc. is based in US, has recently imported surgical raw materials from the UK and has been invoiced for £ 480,000, payable in 3 months. It has also exported surgical goods to India and France. The Indian customer has been invoiced for £ 138,000, payable in 3 months, and the French customer has been invoiced for € 590,000, payable in 4 months. Current spot and forward rates are as follows:

	£/U5\$
Spot	0.9830 - 0.9850
Three months forward	0.9520 - 0.9545

	- u + u
Spot	1.8890 - 1.8920
Four months forward	1.9510 — 1.9540

Current money marke	et rates are as follows:		$\langle \rangle \rangle$		
UK	10.00% — 12.0	0% p.a.			
France	14.00% — 16.0	0% p.a.			
USA	11.50% — 13.00	% p.a.			

You as the Treasury Manager are required to show how the company can hedge its foreign exchange exposure using Forward markets and Money markets and suggest the best hedge option.

Solution:

Dealing with the £ \$xposure of the company

CA Ankit Sarvaiya ca.ankitsarvaiya@gmail.com FB & Telegram: Prof. CA Ankit Sarvaiya

1) Forward market bedge	
The company has a net EC Pava	able exposure Accordingly the strategy would be to Buy E Forward Contract
and accordingly the amount pay	where after 3 months will be $f_{342} 000 (x) $/f_{100570} = 359244
and accordingly, the amount pay	
2) Money market hedge	
To pay £ after 3 months' Colun	nbus shall requires to borrow in \$ and translate to £ and then deposit in £.
(Invest — Buy — Borrow)	
Step 1. Invest	
for payment of £ 3	342,000 in 3 months (@ 2.5% interest) amount required to be deposited now
shall be:	
= (£ 342,000 / 1.02	25)
<u>=£333,658</u>	
Step 2. Buy	
At spot rate of £/3	\$ 0.9830, a \$ loan needed will be equal to:
=£333,658 (x) \$/	'£ ¹ /0.9830
<u>= \$ 339.429</u>	CAEDE DOMINI
Step 3. Borrow	
Loan repayable aft	er 3 months (@ 3.25% interest) will be equal to:
= 339,429 (x) 1.0	325
<u>= ⊅ 350,400</u>	
Conclusion	
In this case the money market h	hedge is a cheaper option
Dealing with the \in Exposure of the c	VIEDO
€ Receipt Amount to be hedged	= € 590,000
Now we Convert exchange rates to h	nome currency
	€ / US\$
Spot	0.5285 - 0.5294
4 months forward	0.5118 — 0.5126

1) <u>forwar</u>	d market hedge			
The co	The company has a net FC Receivable exposure. Accordingly, the strategy would be to Sell \in Forward Contract			
and acc	cordingly, the amount receivable	after 4 months will be € 590,000 (x) $$/€ ^{1}/_{0.5126} = $ 1,150,995$		
2) <u>Money</u>	market hedge			
Torec	eive \$ after 4 months' Columbus	shall requires to borrow in \in and translate to \$ and then deposit in \$.		
(Borrow	v — Sell — Invest)			
Step 1.	Borrow			
	for receipt of € 590,000	in 4 months (@ 5.33% interest) amount required to be borrowed now		
	shall be:			
	= (€ 590,000 / 1.0533)			
	= € 560,144			
Step 2	Sell			
	At spot rate of €/\$ 0.529	94, a \$ deposit needed will be equal to:		
	= € 560,144 (x) \$/€ ¹ / _{0.5294}	4		
	= \$ 1,058,074			
Step 3	Invest			
	Amount receivable after 4	months (@ 3.83% interest) shall equal to:		
	= \$ 1,058,074 (x) 1.0383			
	<u>= \$ 1.098,598</u>			
Conclusion:				
In this case	e the forward cover hedge is a b	netter option.		
Question 3	<u>»:</u>			
Wenden Co	is a Dutch-based company which	h has the following expected transactions.		
One month:	Expected receipt of	£ 2,40,000		
One month:	Expected payment of	£ 1,40,000		
Three mont	hs: Expected receipts of	£ 3,00,000		
The finance	e manager has collected the follo	wing information:		
Spot rate (£ per €):	1.7820 ± 0.0002		
One month	forward rate (£ per €):	1.7829 ± 0.0003		
Three mont	hs forward rate (£ per €):	1.7846 ± 0.0004		

FB & Telegram: Prof. CA Ankit Sarvaiya

Foreign Exchange Exposure {ForEx} [Old & New Scheme]

Money market rates for Wenden Co.

	Borrowing	Deposit	
One year Euro Interest Rate	4.90%	4.60%	
One year Sterling Interest Rate	5.40%	5.10%	atte
		29	CMET AL
You are required to:			

- 1. Calculate the expected Euro receipts in one month and in three months using the forward market.
- Calculate the expected Euro receipts in three months using a money-market hedge and recommend whether a forward market hedge or a money market hedge should be used.

Solution:

- 1) Evaluation of Forward Cover Hedge-One month Receipt'sNet receipt in 1 month= £ 2,40,000 (-) £1,40,000Wenden Co needs to sell Sterling at an exchange rate of £/€ (1.7829 + 0.0003)= £/€ 1.7832Euro value of net receipt= £ 1,00,000 (x) €/£ $^{-1}/_{1.7832}$ = £ 56,079
- -Three Month Receipt'sReceipt in 3 months= £ 3,00,000Wenden Co needs to sell Sterling at an exchange rate of £/€ (1.7846 + 0.0004)= £/€ 1.7850Euro value of receipt in 3 months = £ 3,00,000 (x) €/£ $\frac{1}{17850}$ = € 1.68,067
- Evaluation of Money Market Hedge (Borrow Sell Invest)

Expected Receipts after 3 months = \pm 300,000

Step 1.	Borrow	
	for receipt of £ 300,000 in 3 months	(@ 5.40% interest p.a.) amount required to be borrowed
	now shall be:	
	= (£ 300,000 / 1.0135)	
	= £ 296.004	

 Step 2.
 Sell

 At spot rate of £/€ [1.7820 + 0.0002], a € deposit needed will be equal to:

 = £ 296,004 (x) €/£ ¹/17822

 = € 166,089

Step 3. Invest

CA Ankit Sarvaiya ca.ankitsarvaiya@gmail.com FB & Telegram: Prof. CA Ankit Sarvaiya

Foreign Exchange Exposure {ForEx} [Old & New Scheme]

different countries should be equal, when measured in a common currency For Example: Suppose of 1 Kg of Rice is available in India for ₹ 50 and the same is available in the US for \$ 1. The exchange rate established is 1\$ = ₹ 50. Now let us assume that the inflation rates in India is 10% and 5% in US. So, after a year, 1 Kg of rice will be available in US for \$ 1.05, and the same will be available in India for ₹ 55. So, now the exchange rate will be \$ 1.05 = ₹ 55 i.e. \$ 1 = 52.38095. This shows that the \$ has become expensive in India, i.e. \$ is at a Premium and ₹ is at a discount (as the rate given is a \$ rate) In short, the exchange rates are affected by the inflation rates in various countries. We must co-relate PPP with IRP as the math's Involved is same. The country whose inflation rate is lower, has its currency at a Premium The PPP Equation is: $\frac{\mathcal{E}(5)}{5} = \frac{1+r_A}{1+r_C}$ FB & Telegram: Prof. CA Ankit Sarvaiya CA Ankit Sarvaiya Foreign Exchange Exposure {ForEx} [Old & New Scheme] ca.ankitsarvaiya@gmail.com © 2019 | Reproduction of any part of this book without the permission of the author is not permissible |

The forward market is marginally preferable to the money market hedge for the Sterling receipt expected after 3 months.

Amount receivable after 3 months (@ 4.60% interest p.a.) shall equal to:

Explain the Purchasing Power Parity (PPP) Theory

= € 166,089 (x) 1.0115

= € 167,999

Conclusion:

The Purchasing Power Theory refers to the amount of goods and services that money can buy. Inflation erodes the purchasing power of money.

Exchange rates are affected by inflation. Higher rate of inflation in one country (as compared to the other country, results in discount of currency of that country and vice versa)

The ABSOLUTE FORM of PPP, also called the 'Law of One Price' suggests that prices of similar products of two

Here, 'r' refers to the Inflation rate. Remember, in case of a \mathbf{E} / \mathbf{S} rate, r_A means the \mathbf{E} Inflation Rate, and r_{β} means the \$ inflation rate (Denominator is the inflation rate of the currency whose rate is given)

₹/\$50.00

8% p.a.

3% p.a.

Question 40:

-	Spot Rate	
---	-----------	--

- Expected Inflation in India
 - Expected Inflation in US
 - find E(S) [i.e. Expected Spot Rate] after 1 year and 3 years.

Solution:

Spot Rate is ₹ / \$ 50.00. As per the PPP Theory,

 $\frac{\varepsilon(5)}{5} = \frac{1+r_A}{1+r_B}$

Thus, Expected Spot Rate at the end of Year 1: $\frac{\mathcal{E}(S)}{50} = \frac{1.08}{103}$

Thus, Expected Spot Rate at the end of Year 3: $\mathcal{E}(5) = 50 \text{ (x) } \frac{108}{103} \text{ (x) } \frac$

Explain the process of "Arbitrage" under the PPP Theory

Purchasing Power Parity Theory states that higher inflation in one country will be offset by depreciation in the

currency of that country. PPP theory should hold good, to prevent commodity arbitrage.

There are two forms of PPP Theory, viz:

a) Absolute form of PPP

Consider a common basket of commodities which is priced at \$ 1,000 in US and ₹ 60,000 in India. So we have \$ 1,000 = ₹ 60,000 or ₹ / \$ 60.00.

Assuming that there are no transportation costs and trade barriers, law of one 1 price must hold good to prevent commodity arbitrage. Suppose the actual exchange rate is ₹ / \$ 61.50, this means that the commodity is relatively overpriced in the US, i.e. relatively underpriced in India.

Arbitrage in this case would involve the Following steps:

Buy the commodity in India : Outflow ₹ 60,000 1.

: Inflow \$ 1,000 2. Sell the commodity in US

3. Convert \$ 1,000 into ₹ through the Forex market, getting \$ 1,000 (x) ₹ / \$ 61.50 = ₹ 61,500

If everybody joins this party

On Account of step 1, commodity price in India will rise. (as demand increases)

CA Ankit Sarvaiya ca.ankitsarvaiya@gmail.com FB & Telegram: Prof. CA Ankit Sarvaiya

Foreign Exchange Exposure {ForEx} [Old & New Scheme]

<u>= ₹/\$ 52,43</u>

= ₹/\$ 57.64

The party will come to an end (i.e. ar	rbitrage will stop), when the exchange rate shall be:
	Price Basket in India
	₹/\$= Price Basket in US
b) <u>Relative Form of PPP</u>	
It means that if the inflation rate	in one country is higher than that in another country then the effect o
this high inflation is offset by the	depreciation in the currency of that country.
Oursetten lik	
Question 41:	
The price of a commodity in UK 15 £ 150), while in the US it is \Rightarrow 225. Exchange rate is presently fixed at \Rightarrow / \pm i.o
Explain the process of Commodity Arbi	.urage.
Solution	
Doutton.	
\rightarrow Buy the commodity in LK	Outflow £ 150
\rightarrow Sell the commodity in US	: Inflow \$ 225
\rightarrow Convert \$ 225 into f through	the forey market getting \$ 225 (x) $f(x) f(1/165) = f(13636)$
$\Delta r bitrage 055 = 6 150 (-) 6 13636$	5 = 1364
74 bid dge hoop 1 be (7 2 loo.ed	
ii. Path 2 — Buy in US and Sell in UK	
\rightarrow Buy the commodity in US	: Outflow \$ 225
ightarrow Sell the commodity in UK	: Inflow £ 150
\rightarrow Convert £ 150 into \$ through t	the Forex market, getting £ 150 (x) $$ / £ 1.65 = $ 247.50$
Arbitrage Profit = \$ 247.50 (-) \$	225 = \$ 22.50
Write a note on The International Fi	scher Effect (IFE) Theory
International fisher Effect is the relation	Lionship between interest rate differentials and inflation differentials (i
Interest Rate and Inflation Rates). Acc	ording to the IFE, 'nominal risk—free interest rates contain a real rate (
return and anticipated inflation'. This i	means if investors of all countries require the same real return, intere:
rate differentials between countries m	ay be the result of differential in expected inflation.
	/

- (

_

The Fisher Effect states that: (1 + Nominal Interest) = (1 + Real Interest rate) x (1 + Inflation Rate) As per the Uncovered IRP Theory: $\frac{\mathcal{E}(5)}{5} = \frac{1+l_A}{1+l_B}$ (i.e. Interest Rate Differentials) As per the Uncovered PPP Theory: $\frac{\mathcal{E}(5)}{5} = \frac{1+r_A}{1+r_B}$ (i.e. Inflation Rate Differentials)

i.e. Ratio of Interest Rate Factors = Ratio of Inflation Rate Factors

Question 42:			
from the following data, calculate th	e Interest Rate in US.		
- Interest rate in India (i _A)	: 10%		
- Inflation rate in India (r $_{\rm A}$)	: 6%	WILL A	
- Inflation rate in US (r_B)	: 4%		DAD SP/
Solution:			
Let the Interest Rate in US =	ίβ		E
Based on the International Fischer 8	Effect,		
$\frac{1+\iota_A}{1+\iota_B} = \frac{1+r_A}{1+r_B}$		1.	
Thus, $\frac{1+0.10}{1+l_{B}} = \frac{1+0.06}{1+0.04}$			
Thus, Interest Rate in US (i6)	= 7.92% p.a.		1
Question 43:			
XYZ Ltd. is considering a project i	n Luxemburg, which will	involve an initial invest	ment of € 1,30,00,000. The
project will have 5 years of life. Cur	rent spot exchange rate	is Rs.58 per €. The ris	k free rate in Germany is 8%
and the same in India is 12%.			
Cash inflow from the project are as	follows:		

Year	Cash Inflow (€)
1	3,00,00,000
2	2,50,00,000
3	3,50,00,000
4	4.00.00.000
5	6,00,00,000

Calculate the NPV of the project using foreign currency approach. Required rate of return on this project is 14%.

Solution:

As per the International Fischer Effect:

(1 + Nominal Interest) = (1 + Real Interest rate) x (1 + Risk Premium)

 $(1 + 0.14) = (1 + 0.12) \times (1 + Risk Premium)$

Thus. Risk Premium = 1.7857%

Therefore, Risk adjusted dollar rate is

= 1.017857 (x) 1.08 = 1.0992857 - 1 = 0.0992859

Calculation of NPV						
Year	Cash Inflow(€)	PVF @ 9.92857%	PV of CF(€)			
1	30,00,000	0.9097	27,29,045			
2	25,00,000	0.8275	20,68,802			
3	35,00,000	0.7528	26,34,731			

4	40,00,000	0.68	348	27,39,162	//
5	60,00,000	0.62	229	37,37,647	
PV of Inflows				1,39,09,386	
(–) PV of Outfl	0W5			-1.30.00.000	
NPV				9.09.386	

Explain the various types of Currency Exposure in ForEX Markets foreign Exchange Exposure is defined as sensitivity of changes in the value of the firm on account of changes in foreign exchange rates. Foreign exchange exposure is divided into three parts:

1.	Transaction Exposure:					
	It is concerned with gain / loss arising out of foreign exchange rate fluctuations on account of outstanding					
	payables and receivables in foreign currency. It measures the effect of an exchange rate change on					
	outstanding obligations that existed before exchange rates changed but were settled after the exchange					
	rate changes.					
	For Example:					
	Suppose an Indian firm has $$60,000$ receivable after 6 months. If the $$$ Falls, then the firm shall make loss.					
	On the other hand, Suppose an Indian firm has $$70,000$ payable after 6 months. If the $$$ rises, then the firm					
	shall make loss.					
2.	Translation Exposure:					
	Also known as accounting exposure or balance sheet exposure, it refers to gains or losses caused by the					
	translation of foreign currency assets and liabilities into the currency of the parent company for consolidation					
	purposes.					
	This relates to the translation of financial statements of foreign subsidiaries & branches into the Parent					
	company's home currency. It refers to the probability of loss that the firm may have to face because of					
	decrease in value of assets due to devaluation of a foreign currency despite the fact that there was no foreign					
	exchange transaction during the year. For this purpose, firms follow "Revised AS 11" - The Net result of this					
	process results in gain / loss, and there by affects the value of firm.					
3.	Economic or Operating Exposure:					
	It refers to the extent to which the economic value of a company can decline due to changes in exchange rate.					
	It is the overall impact of exchange rate changes on the value of the firm. The essence of economic exposure					
	is that exchange rate changes significantly alter the cost of a firm's inputs and the prices of its outputs and					
	thereby influence its competitive position substantially. It is an <u>Indirect exposure</u> faced by all firms and arises					
	out of the competitive nature of business.					
	For example:					
	Suppose a firm is establishing a subsidiary in a foreign country which is selling the goods produced by the					
	firm in that country. It estimates that a large quantity will be sold at attractive prices. Suppose the currency					
	of that country falls and the market is not in a position to absorb the increase in price, future income of the					
	firm and future cash flows of the firm will also fall.

1.	Profit at current exchange rates				
	= 2,400 [(€ 500 x ₹/€ 51.50) — {(S\$ 800 x ₹/S\$ 27.25) + ₹ 1,000 + ₹ 1,500}]				
	= 2,400 [₹ 25,750 - ₹ 24,300]				
	= ₹ 34,80,000				
2.	Profit after change in exchange rates				
	= 2,400 [(€ 500 x ₹/€ 52) - {(5\$ 800 x ₹/5\$ 27.75) + ₹ 1,000 + ₹ 1,500}]				
	= 2,400 [₹ 26,000 - ₹ 24,700]				
	= ₹ 31,20,000				
З.	Loss due to Transaction Exposure				
	= ₹ 34,80,000 - ₹ 31,20,000				
	= ₹ 3,60,000				
4.	Profit based on new exchange rates				
	= 2,400 [₹ 25,000 - {(5\$ 800 x ₹/5\$ 27.15) + ₹ 1,000 + ₹ 1,500}]				
	= 2,400 [₹ 25,000 - ₹ 24,220]				
	= ₹ 18,72,000				
	CLE ANSAMI I				
5.	Profit after change in exchange rates at the end of six months				
	= 2,400 [₹ 25,000 (−) {(5\$ 800 x ₹ 27.75) + ₹ 1,000 + ₹ 1,500}]				
	= 2,400 [₹ 25,000 - ₹ 24,700]				
	= ₹ 7,20,000				
6.	Decline in profit due to transaction exposure				
	= ₹ 18,72,000 - ₹ 7,20,000				
	= ₹ 11,52,000				
Cur	rent Price of Each unit in S\$ = ₹ 25,000 (x) S\$/₹ (1/5150) = S\$ 485.44				
Pric	ce after change in exchange Rate = \₹ 25,000 (x) 5\$/₹ (1/5175) = 5\$ 483.09				
Cha	nge in Price due to change in Exch. Rate = \$\$ 485.44 - \$\$ 483.09				
	= 5\$ 2.35 or (-) 0.48%				
Pric	ce elasticity of demand = 1.5				
Inci	rease in demand due to fall in price = 0.48% x 1.5 = 0.72%				

Profit = 2,417 [₹ 25	5,000 — {(5\$ 800) x ₹/5\$ 27.75) + ₹ 1,000 + ₹ 1,500)]
= 2,417 [₹ 25	5,000 - ₹ 24,700	
= ₹ 7,25,100		
		BUNG THE STORY
Therefore, decrease	in profit due to o	perating exposure
= ₹ 18,72,000 — ₹ 7,3	25,100 <u>= ₹ 1</u>	11,46,900
Question 46:		
OJ Ltd. is a supplier	of leather goods t	to retailers in the UK and other Western European countries. The compa
is considering enteri	ing into a joint ve	nture with a manufacturer in South America. The two companies will ea
own 50 per cent of	the limited liabilit	y company JV(SA) and will share profits equally. £ 450,000 of the init
capital is being provi	ided by OJ Ltd. an	nd the equivalent in South American dollars (SA\$) is being provided by
foreign partner. The	managers of the	joint venture expect the following net operating cash flows, which are
nominal terms:		
SA \$ ('000s)	Forward	Rates of Exchange to the £ Sterling
Year 1	4.2500	10
Year 2	6.5000	15
Year 3	8.3500	21

Assuming you are financial adviser retained by OJ Limited to advise on the proposed joint venture.

 Calculate the NPV of the project under the two assumptions explained below. Use a discount rate of 18 per cent for both assumptions.

Assumption 1:

The South American country has exchange controls which prohibit the payment of dividends above 50 per cent of the annual cash flows for the first three years of the project. The accumulated balance can be repatriated at the end of the third year.

Assumption 2: The government of the South American country is considering removing exchange controls and restriction on repatriation of profits. If this happens all cash flows will be distributed as dividends to the partner companies at the end of each year

2. Comment briefly on whether or not the joint venture should proceed based solely on these calculations.

Solution:

Since only one discounting rate in given and interest rates are absent, we have to follow Home currency approach.

Уr	CF (5A\$)	OJ's Share	Withdraw	Ex. Rate	CF (£)	PVF @ 18%	PV of £ CF

In spite of fact that the forward quotation for JP ¥ was available through cross currency rates, Mr. X, the treasury manager purchased spot US \$ and converted US \$ into JP ¥ in Tokyo using 6 months forward rate. However, on 31st December, 2009 ₹/US \$ spot rate turned out to be 46.24/26. You are required to calculate the loss or gain in the strategy adopted by Mr. X by comparing the notional cash flow involved in the forward cover for Yen with the actual cash flow of the transaction.

Solution:

Here we have to compare the notional cash outflow for the forward rate of JP ¥ and the actual cash outflow involved in rupees against forward purchase of JP ¥ for dollars in Tokyo and spot purchase of \$ in Delhi for ₹.

1. <u>Cash flow of forward purchasing the JP ¥</u>

₹/JP¥6 month forward rate

= [₹]/_{\$} (x) ^{\$}/_{JP¥}

 $= \left[\sqrt[7]{46.00 (x)} / JP \times 1 / 10.60 \right] / \left[\sqrt[7]{46.03 (x)} / JP \times 1 / 10.00 \right]$

Hence, ₹/JP ¥ 6 month Forward rate = ₹/JP ¥ 0.415913/0.418455

Accordingly, if the company had purchased JP ¥ forward against ₹ it would have paid

= JP ¥ 1,000,000 (x) ₹/JP ¥ 0.418455

= ₹ 418,454.50

2. <u>Cash flow of forward purchasing US\$ in spot market and converting into JP ¥</u>

Amount of US dollars to be paid on due date by purchase of JP \pm 1 million in forward market

= JP ¥ 1,000,000 (x) \$/JP¥ 110 = US \$ 9,090,91

Cash outflows in rupees against purchase of dollars on Dec. 31, 2009

= US \$ 9,090.91 (x) ₹/\$ 46.26 = ₹ 420,545.45

Thus, Loss or gain due to strategy adopted by Mr. X

= ₹ 4,18,454.50 (-) ₹ 4,20,545.45

<u>= ₹ 2090.95</u>

Thus, the company paid an excess amount of ₹ 2,090.95 under the strategy adopted by Mr. X.

Leading means Advancing a Payment (i	.e. Making a payment before it is	due). If the importer gets certain advantage
in terms of early payment by borrowi	ng funds from a local bank at a	local rate, then the importer should lead the
payment.		
Question 48:	59	E Here Bar
An Indian firm has imported a machin	e from USA. The Invoice value i:	s \$ 1,00,000. The payment is to be made in 2
months' time. The USD rates are quot	ed in the market as follows:	
- Spot Rate	₹ / \$ 45.00 / 45.05	
- 2 month forward rate	₹ / \$ 45.30 / 45.36	
The Importer firm is considering lead	ling. It can borrow rupees in Ind	lia at the rate of 9% p.a. You are required to:
i. Opine whether leading should be u	Indertaken or not.	
ii. Will your opinion change if the ex	porter allows a discount of 1% o	n immediate payment?
	E.I.I	
Solution:		J. S.
It is an Indian Firm, which has \$ 1,00,	000 Payable. The given rate is	a \$ rate — The importer will have to BUY \$.
i. <u>Payment Without Discount</u>		
- Without Leading \$ 1,00,000	(x) ₹ / \$ 45.36	₹ 45,36,000
- Leading \$ 1,00,000	(x) ₹ / \$ 45.05 (x) 1.015	₹ 45,72,575
	(i.e. Int — 9% p.a. :	= 1.5% for 2 m)
Decision: Not to lead		
		\equiv
ii. Payment with Discount		
- Without Leading \$ 1,00,000	(x) ₹ / \$ 45.36	₹ 45,36,000
- Leading (\$ 1,00,000	— 1%) (x) ₹ / \$ 45.05 (x) 1.015	<u>₹ 45,26,849</u>
	(Int – 9% p.a. = 1.5	5% for 2 m)
<u>Decision:</u> Go ahead with leading.		
Explain the Concept of "Lagging" in	ForEX Markets	
Lagging means Delaying the Payment.	The importer may decide to del	ay the payment if the exchange rates are in
his favor and also if he is in a positic	on to invest funds at a better ra	ate
Question 49:		
An Indian firm has imported a machir	ne from USA. The invoice value i	s \$1,00,000. The payment is to be made in 2
months' time. The USD rates are quot	ed in the market as follows:	
- 2 months forward rate	₹ / \$ 45.30 / 45.36	
	/	

payment is delayed after it t	pecomes due. Your cost of capital is 12%. Opine.	
		-
Solution:	29	19166-12
It is an Indian Firm, which ha	as \$ 1,00,000 Payable. The given rate is a \$ rate — The impo	rter will have to BUY \$.
- Without Lagging	\$ 1,00,000 (x) ₹ / \$ 45.36 (x) (¹ / ₁₀₂)	₹ 44,47,058
	(i.e. 12% p.a. = 2% for 2 m)	The start
- Lagging	\$ 1,00,000 (x) ₹ / \$ 44.85 (x) 1.0075\$ (x) (¹/ ₁₀₃)\$\$	<u>₹ 43,87,027</u>
	154	202
☆ (i.e. 9% p.a. = 0.75% For 2 r	n)	
☆☆☆ (i.e. 12% p.a. = 3% for 3	m)	
Decision: Go for Lagging		
Explain Nostro, Vostro, Lor	ro Accounts in ForEX Markets	
1) <u>Nostro Account:</u>		278 135
Nostro in latin means Ol	IRS. In this sense, Nostro account means OUR Account with .	YOUR BANK. Nostro is a
current account that a	bank holds with a bank in a foreign country. Such account	ts are operated in the
currency of that foreig	n country. For eq: The account held by State Bank of India v	with Bank of America in
currency of that foreig New York is a Nostro Ac	n country. For eg: The account held by State Bank of India v count of the State bank of India.	with Bank of America in
currency of that foreig New York is a Nostro Ac	n country. For eg: The account held by State Bank of India v count of the State bank of India.	with Bank of America in
currency of that foreig New York is a Nostro Ac We will be provided with	n country. For eg: The account held by State Bank of India w count of the State bank of India. the opening a/c balance and the opening position, certain tra	with Bank of America in ansactions for a period,
currency of that foreig New York is a Nostro Ac We will be provided with and we have to compute	n country. For eg: The account held by State Bank of India v count of the State bank of India. the opening a/c balance and the opening position, certain tra the closing balance and the closing position.	with Bank of America in ansactions for a period,
currency of that foreig New York is a Nostro Ac We will be provided with and we have to compute	n country. For eg: The account held by State Bank of India v count of the State bank of India. the opening a/c balance and the opening position, certain tra the closing balance and the closing position.	with Bank of America in ansactions for a period,
currency of that foreig New York is a Nostro Ac We will be provided with and we have to compute	n country. For eg: The account held by State Bank of India v count of the State bank of India. the opening a/c balance and the opening position, certain tra the closing balance and the closing position.	with Bank of America in ansactions for a period,
currency of that foreig New York is a Nostro Ac We will be provided with and we have to compute Points to Remember: 1. We should think from	n country. For eg: The account held by State Bank of India v count of the State bank of India. the opening a/c balance and the opening position, certain tra the closing balance and the closing position.	with Bank of America in ansactions for a period,
currency of that foreig New York is a Nostro Ac We will be provided with and we have to compute Points to Remember: 1. We should think from 2. Think of FC. not HC	n country. For eg: The account held by State Bank of India v count of the State bank of India. the opening a/c balance and the opening position, certain tra the closing balance and the closing position.	with Bank of America in ansactions for a period,
currency of that foreig New York is a Nostro Ac We will be provided with and we have to compute Points to Remember: 1. We should think from 2. Think of FC, not HC 3. Inflow of FC + Cred	n country. If the draft later on de	ansactions for a period,

Foreign Exchange Exposure {ForEx} [Old & New Scheme]

achieve the target position, we advise FORWARD	Transactions.
2) <u>Vostro Account:</u>	
It means YOUR ACCOUNT with OUR BANK. It is the ac	count which is held by a foreign bank with a Local bank.
For example, If Bank of America maintains an accou	nt with State Bank of India it will be a Vostro Account
for State bank of India.	
3) Loro Account:	
It means YOUR ACCOUNT with THEIR BANK. It is use	d when referring to third party accounts. For example,
State bank of India account in Bank of America is Lo	oro Account for ICICI Bank
Account of SBI in Bank of America	
Question 50:	
You as a dealer in foreign exchange have the following pe	sition in Swigg Grands on 215t October 2017

/ Particulars	Swiss Francs	
Balance in the Nostro a/c Credit	1,00,000	
Opening position overbought	50,000	
Purchased a bill on zurich	80,000	
Sold Forward TT	60,000	
Forward purchase contract cancelled	30,000	
Remitted by TT	75,000	
Draft on Zurich cancelled	30,000	

What steps would you take, if you are required to maintain a credit balance of Swiss Francs 30,000 in the Nostro Account, and keep an overbought position of Swiss Francs 10,000.

Explain the concept of "Netting"

The simplest scheme is known as bilateral netting and involves pairs of companies. Each pair of associates nets out their own individual positions with each other & cash flows are reduced by the lower of each company's purchases from or sales to its netting partner. It reduces the number of intercompany payments and receipts. It reduces banking costs and increases central control of intercompany settlements.

CA Ankit Sarvaiya ca.ankitsarvaiya@gmail.com FB & Telegram: Prof. CA Ankit Sarvaiya

Foreign Exchange Exposure {ForEx} [Old & New Scheme]

Question 51:

following are the details of cash inflows and outflows in foreign currency denominations of MNP Co. an Indian

export firm, which has no foreign subsidiaries:

Currency	Inflow	Outflow	Spot Rate	Forward Rate	
US \$	4,00,00,000	2,00,00,000	48.01	48.82	
french francs (ffr)	2,00,00,000	80,00,000	7.45	8.12	
UK E	3,00,00,000	2,00,00,000	75.57	75.98	
Japanese Yen (¥)	1,50,00,000	2,50,00,000	3.20	2.40	

You are required to:

- (i) Determine the net exposure of each foreign currency in terms of Rupees.
- (ii) State whether any of the exposure positions offsetting to some extent?

Solution:

(i) <u>Determination of the Net Exposure of each Foreign Currency in terms of Rupees</u>

Cur	Inflow	Outflow	Net	Spot	Forward	Difference	Net	
				Rate	Rate		Exposure	
US\$	4,00,00,000	2,00,00,000	2,00,00,000	48.01	48.82	0.81	1,62,00,000	
ffr	2,00,00,000	80,00,000	1,20,00,000	7.45	8.12	0.67	80,40,000	
UK £	3,00,00,000	2,00,00,000	1,00,00,000	75.57	75.98	0.41	41,00,000	
¥	1,50,00,000	2,50,00,000	(1,00,00,000)	3.20	2.40	-0.80	80,00,000	

(ii) Offsetting Positions

a. Net Exposure in all the currencies are offset by better forward rates. In the case of US \$, Ffr and UK
 £, the net exposure is receivable, and the forward rates are quoted at a premium for these currencies.

b. In case of Japanese Yen (¥), the net exposure is payable, and the forward rate is quoted at a discount. Therefore, a better forward rate is also offsetting the net payable in Japanese Yen (¥).

Question 52:

Trueview plc, a group of companies controlled from the United Kingdom includes subsidiaries in India, Malaysia and the United States. As per the CFO's forecast that, at the end of the June 2018 the position of inter-company indebtedness will be as follows:

- The Indian subsidiary will be owed ₹ 1,44,38,100 by the Malaysian subsidiary and will owe the US subsidiary US \$ 1,06,007.
- The Malaysian subsidiary will be owed MYR 14,43,800 by the US subsidiary and will owe it US\$ 80,000.

CA Ankit Sarvaiya ca.ankitsarvaiya@gmail.com FB & Telegram: Prof. CA Ankit Sarvaiya

Suppose you are head of central treasury department of the group and you are required to net off inter-company balances as far as possible and to issue instructions for settlement of the net balances. For this purpose, the relevant exchange rates may be assumed in terms of £ 1 are US\$ 1.415; MYR 10.215; ₹ 68.10. What are the net payments to be made in respect of the above balances?

Solution:

Statement showing amount due and receivable by each subsidiary

Particulars	India	Malaysia	US
Inflow			
from India	-	- (*')	\$ 1,06,007
From Malaysia	₹ 1,44,38,100		\$ 80,000
From US	-	MYR 14,43,800	
Outflow			
To India	-	₹ 1,44,38,100	
To Malaysia	-	-611	MYR 14.43.800
To US	\$ 1,06,007	\$ 80,000	

Given Exchange Rates are: \$/£ 1.415; MYR/£ 10.215;

₹/£ 68.10.

Since the company belongs to United Kingdom, its Home currency = \pounds Accordingly, we convert the cash flows of all subsidiaries in \pounds based on the above exchange rates. Hence, the cash flows for each subsidiary in \pounds are:

			1		
Particulars	India	Malaysia	/	US	
-					

	1					
Inflow						
from India	/	_		-	74,916.61	
From Malaysia		2,12,013.22		-	56,537.10	
From US		-	1,41,	341.16	-	
Outflow						
To India		- \	-2,12	2,013.22	_	
To Malaysia		- (-	-1,41,341.16	-
To US		-74,916.61	-56,	,537.10	_	
Net £ Exposure		1,37,096.61	-1,27	1,209.14	-9,887.45	

CA Ankit Sarvaiya ca.ankitsarvaiya@gmail.com FB & Telegram: Prof. CA Ankit Sarvaiya

Foreign Exchange Exposure {ForEx} [Old & New Scheme]

	ndian subsidiary £9,887.45.
Explain the concept of "Matc	ching"
Matching is a mechanism when	reby a company matches its foreign currency inflows with its foreign currency
outflows in respect of amount	and approximate timing. The prerequisite for a matching operation is a two-way
cash flow in the same foreign	n currency. Although netting and matching are terms, which are frequently used
interchangeably, there are dist	inctions.
<u>For example:</u>	
An Indian exporter exports fin	hished goods to US firm and he will also import the raw material from the US firms.
Then the receipts and payment	t transactions can be offset at the origin itself by operating a bank account in US ,
for convenience.	
Notition to a house constant to an	
Intra-group and to third-party	tential flows within a group of companies whereas matching can be applied to both
utura-group and to thira-party	Dalancung.
Write a note on "Asset and)	lability Mismatch"
This technique can be used to r	manage balance sheet income statement or cash flow exposures. It has aggressive
or defensive postures.	
In the aggressive attitude, the	firm simply increases exposed cash inflows denominated in currencies, expected to
be strong or increases exposed	d cash outflows denominated in weak currencies.
By contrast, the defensive app	proach involves matching cash inflows and outflows according to their currency of
denomination, irrespective of m	whether they are in strong or weak currencies.
