Required:

Complete the Balance Sheet of ABC Industries as on 31st March, 2021. All calculations should be in nearest Rupee. Assume 360 days in a year.

Working Notes: (1)

Ans.

- Total liability = Total Assets =₹50,00,000 Debt to Total Asset Ratio = 0.40 Debt - = 0.40 Total Assets Debt = 0.40 Or, 50,00,000 So, Debt = 20,00,000
- (2) Total Liabilities = ₹ 50,00,000 Equity share Capital + Reserves + Debt = ₹ 50,00,000 So, Reserves =₹ 50,00,000 - ₹ 20,00,000 - ₹ 20,00,000 So, Reserves & Surplus = ₹ 10,00,000

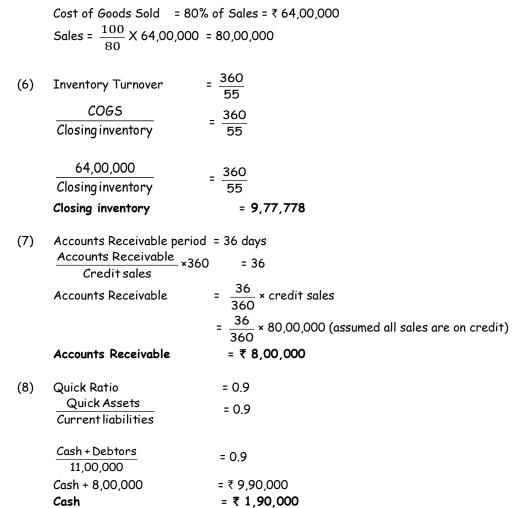

Long term Debt Equity Shareholders' Fund = 30%* (3)

> Long term Debt (20,00,000 + 10,00,000) = 30%* Long Term Debt = ₹ 9,00,000

- (4) So, Accounts Payable = ₹ 20,00,000 - ₹ 9,00,000 Accounts Payable = ₹ 11,00,000
- Gross Profit to sales = 20% (5)

(9) Fixed Assets = Total Assets - Current Assets = 50,00,000 - (9,77,778+8,00,000+1,90,000) = 30,32,222

http://tiny.cc/FASTCostFMbyAB

8

Chapter - 01

By CA Amit Sharma

The return on net worth is 25%. Therefore, the profit after tax of ₹ 4,87,500 should be equivalent to 25% of the net worth.

Net worth
$$\frac{25}{100}$$
 = ₹ 4,87,500
Net worth = $\frac{4,87,500 \times 100}{25}$ = ₹ 19,50,000

The ratio of share capital to reserves is 6:4 Share Capital = 19,50,000 x 6/10 = ₹ 11,70,000 Reserves = 19,50,000 × 4/10 = ₹ 7,80,000

Calculation of Debentures (ii)

Interest on Debentures @ 15% (as given in the balance sheet format) = ₹ 75,000 Debentures = <u>75,000 × 100</u> = ₹ 5,00,000 15

(iii) Calculation of Current Assets

> Current Ratio = 2.5 Payables = ₹ 2,50,000 Bank overdraft = ₹ 1,50,000 Total Current Liabilities = ₹ 2,50,000 + ₹ 1,50,000 = ₹ 4,00,000 Current Assets = 2.5 x Current Liabilities = 2.5 [] 4,00,000 = ₹ 10,00,000

(iv) **Calculation of Fixed Assets**

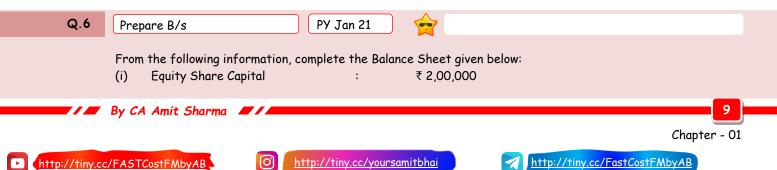

| Particulars | ₹ |

| Total Liabilities | 28,50,000 |
| Less: Current Assets | 10,00,000 |
| Fixed Assets | 18,50,000 |

(v) Calculation of Composition of Current Assets

Inventory Turnover = 12 $\frac{Cost \text{ of goods sold}}{Closing stock} = 12$

| | | Cash (balancing figure) | 1,42,500 |
| | 3,50,000 | | 3,50,000 |

Working Notes

Return on Asset

- Total Debt = 0.75 x Equity Share Capital = 0.75 x ₹ 2,00,000 = ₹ 1,50,000 Further, Current Debt to Total Debt = 0.40. So, Current Debt = 0.40 x ₹ 1,50,000 = ₹ 60,000 Long term Debt = ₹ 1,50,000 - ₹ 60,000 = ₹ 90,000
- 2. Fixed Assets = 0.60 x Equity Share Capital = 0.60 x ₹ 2,00,000 = ₹ 1,20,000
- 3. Total Assets to Turnover = 2 times; Inventory Turnover = 8 times Hence, Inventory /Total Assets = 2/8 =1/4 Further, Total Assets = ₹ 2,00,000 + ₹ 1,50,000 = ₹ 3,50,000 Therefore, Inventory = ₹ 3,50,000/4 = ₹ 87,500 Cash in Hand = Total Assets - Fixed Assets - Inventory = ₹ 3,50,000 - ₹ 1,20,000 - ₹ 87,500 = ₹ 1,42,500

COMMENT on the following aspect of Prabhu Chemicals Limited

- (i) Liquidity
- (ii) Operating profits
- (iii) Financing
- (iv) Return to the shareholders

http://tiny.cc/FASTCostFMbyAB

Ans.

| Ratios | Comment |
|-----------|--|
| Liquidity | Current ratio has improved from last year and matching the industry average. |
| | Quick ratio also improved than last year and above the industry average. |
| | The reduced inventory levels (evidenced by higher inventory turnover ratio) have led to better quick ratio in FY 2022 compared to FY 2021. |
| | Further the decrease in current liabilities is greater than the collective decrease in inventory and debtors as the current ratio have increase from |
| | FY2021 to FY 2022. |

http://tiny.cc/yoursamitbhai

Chapter - 01

| Operating Profits | Operating Income-ROI reduced from last year, but Operating Profit Margin has been maintained. This may happen due to decrease in operating cost. However, both the ratios are still higher than the industry average. |
|----------------------------|---|
| Financing | The company has reduced its debt capital by 1% and saved earnings for equity shareholders. It also signifies that dependency on debt compared to other industry players (60%) is low. |
| Return to the shareholders | Prabhu's ROE is 26 per cent in 2021 and 28 per cent in 2022 compared to an industry average of 18 per cent. The ROE is stable and improved over the last year. |

Current Liabilities 1,10,00,000 Current Liabilities = ₹ 55,00,000

(vii) Calculation of Debtors

Average collection period = $\frac{\text{Debtors}}{\text{Credit Sales}} \times 12 \text{ months}$

Debtors 3,90,00,000 × 12 = 2 ⇒Debtors = ₹ 65,00,000

Net worth = Share capital + Reserves = ₹ 75,00,000

 $\frac{\text{Capital}}{\text{Reserves and Surplus}} = \frac{1}{4} \Rightarrow \text{Share Capital} = ₹75,00,000 \times \frac{1}{5} = ₹15,00,000$ Reserves and Surplus = ₹75,00,000 × 5 = ₹60,00,000

Q.15

Debtor / Creditor Ratio

RTP May 22 🔶 🔁

FM Ltd. is in a competitive market where every company offers credit. To maintain the competition, FM Ltd. sold all its goods on credit and simultaneously received the goods on credit. The company provides the following information relating to current financial year:

| Debtors Velocity | 3 months |
|---|-------------|
| Creditors Velocity | 2 months |
| Stock Turnover Ratio (on Cost of Goods Sold) | 1.5 |
| Fixed Assets turnover Ratio (on Cost of Goods Sold) | 4 |
| Gross Profit Ratio | 25% |
| Bills Receivables | ₹ 75,000 |
| Bills Payables | ₹ 30,000 |
| Gross Profit | ₹ 12,00,000 |

FM Ltd. has the tendency of maintaining extra stock of ₹ 30,000 at the end of the period than that at the beginning.

DETERMINE:

- (i) Sales and cost of goods sold
- (ii) Sundry Debtors
- (iii) Closing Stock
- (iv) Sundry Creditors
- (v) Fixed Assets

(i) Determination of Sales and Cost of goods sold:

Gross Profit Ratio = $\frac{\text{GrossProfit}}{\text{Sales}}$ ×100

| | Or, $\frac{25}{100}$ = $\frac{12,00,000}{\text{Sales}}$ Or, Sales = $\frac{12,00,00,000}{25}$ = ₹ 48,00,000 |
| | Cost of Goods Sold = Sales - Gross Profit = ₹ 48,00,000 - ₹ 12,00,000 = ₹ 36,00,000 |
| | Determination of Sundry Debtors: |

Debtors' velocity is 3 months or Debtors' collection period is 3 months,

| So, Debtors' turnover ratio | $= \frac{12 \text{months}}{3 \text{months}} = 4$ |
|-----------------------------|--|
| Debtors' turnover ratio | = Credit Sales Average Accounts Receivable |
| | 48,00,000 Bills Receivable + Sundry Debtors = 4 |

 Or, Sundry Debtors + Bills receivable
 = ₹ 12,00,000

 Sundry Debtors = ₹ 12,00,000 - ₹ 75,000
 = ₹ 11,25,000

(iii) Determination of Closing Stock

| Stock Turnover Ratio = | $\frac{\text{Cost of Goods Sold}}{\text{Average Stock}} =$ | 36,00,000 Average Stock | =1.5 |
|-------------------------|--|----------------------------|------|
| So, Average Stock = ₹ 2 | 4,00,000 | | |

(iv) Determination of Sundry Creditors:

Creditors' velocity of 2 months or credit payment period is 2 months.

So, Creditors' turnover ratio = $\frac{12 \text{ months}}{2 \text{ months}}$ = 6 Creditors turnover ratio = $\frac{\text{Credit Purchases *}}{\text{Average Accounts Payables}}$ = $\frac{36,30,000}{\text{Sundry Creditors + Bills Payable}}$ = 6 So, Sundry Creditors + Bills Payable = ₹ 6,05,000 Or, Sundry Creditors + ₹ 30,000 = ₹ 6,05,000 Or, Sundry Creditors = ₹ 5,75,000

By CA Amit Sharma

Determination of Fixed Assets (v)

Fixed Assets Turnover Ratio = Cost of Goods Sold = 4 Fixed Assets

 $\frac{36,00,000}{\text{Fixed Assets}} = 4$ Or, Or, Fixed Asset = ₹ 9,00,000

Workings:

*Calculation of Credit purchases:

Cost of goods sold = Opening stock + Purchases - Closing stock

₹ 36,00,000 = ₹ 23,85,000 + Purchases - ₹ 24,15,000

Purchases (credit) = ₹ 36,30,000

Calculation of credit purchase also can be done as below:

Or Credit Purchases =Cost of goods sold +Difference in Opening Stock

Or Credit Purchases = 36,00,000 + 30,000=₹ 36,30,000

- (iv) Return to the shareholders

Ans.

| Ratios | Comment | | | |
|-----------|--|--|--|--|
| Liquidity | Current ratio has improved from last year and matching the industry average. | | | |

Chapter - 01

By CA Amit Sharma

| | Quick ratio also improved than last year and above the industry average. This may happen due to reduction in receivable collection period and quick inventory turnover. However, this also indicates idleness of funds. Overall it is reasonably good. All the liquidity ratios are either better or same in both the year compare to the Industry Average. |
|-------------------------------|---|
| Operating Profits | Operating Income-ROI reduced from last year but Operating Profit Margin has been maintained. This may happen due to variability of cost on turnover. However, both the ratio are still higher than the industry average. |
| Financing | The company has reduced its debt capital by 1% and saved operating profit for equity shareholders. It also signifies that dependency on debt compared to other industry players (57%) is low. |
| Return to the shareholders | R's ROE is 24 per cent in 2017 and 25 per cent in 2018 compared to an industry average of 15 per cent. The ROE is stable and improved over the last year. |

Q.22

Change in current ratio RTP Nov 18

2:1

Assuming the current ratio of a Company is 2, STATE in each of the following cases whether the ratio will improve or decline or will have no change:

- (i) Payment of current liability
- (ii) Purchase of fixed assets by cash
- (iii) Cash collected from Customers
- (iv) Bills receivable dishonoured
- (v) Issue of new shares

| A | Current Ratio = | Current Assets(CA) | |
|------|-----------------|--------------------------|----------|
| Ans. | | Current Liabilities (CL) | = 2 i.e. |

| S. No. | Situation | Improve/ Decline/ No Change | Reason |
|-----------|--|----------------------------------|--|
| (i) | Payment of Current liability | Current Ratio will improve | Let us assume CA is ₹ 2 lakhs & CL is ₹ 1 lakh. If payment of Current Liability = ₹10,000 then, CA = 1, 90,000 CL = 90,000. Current Ratio = $\frac{1,90,000}{90,000}$ = 2.11 : 1. When Current Ratio is 2:1 Payment of Current liability will reduce |
| | | | the same amount in the numerator and denominator. Hence, the ratio will improve. |
| (ii) | Purchase of Fixed Assets by cash | Current Ratio will decline | Since the cash being a current asset converted into fixed asset, current assets reduced, thus current ratio will fall. |
| (iii) | Cash collected from Customers | Current Ratio will not change | Cash will increase and Debtors will reduce. Hence No Change in Current Asset. |
| (iv) | Bills Receivable dishonoured | Current Ratio will not change | Bills Receivable will come down and debtors will increase. Hence no change in Current Assets. |
| (v) | Issue of New Shares | Current Ratio will improve | As Cash will increase, Current Assets will increase and current ratio will increase. |

```
Q.24 Inventory T/O
```

MTP Nov 23 (2)

ABC Ltd. has total sales of 12,00,000 all of which are credit sales. It has a gross profit ratio of 20% on sales and a current ratio of 2. The company's current liabilities are ₹ 3,00,000. Further, it has inventories of ₹ 1,00,000, marketable securities of ₹ 70,000 and cash of ₹ 50,000. From the above information:

- (i) CALCULATE the average inventory if the expected inventory turnover ratio is three times?
- (ii) Also CALCULATE the average collection period if the opening balance of debtors is expected to be ₹ 1,20,000.

Assume 360 days a year.

Ans. (i) Calculation of Average Inventory

Since gross profit is 20% of sales, the cost of goods sold should be 80% of the sales.

Inventory Turnover

Cost of goods sold

= 12,00,000 x
$$\frac{80}{100}$$
 = 9,60,000
= $\frac{Cost of goods sold}{Average Inventory}$
9,60,000

Average Inventory

📕 By CA Amit Sharma 🛛

http://tiny.cc/FastCostFMbyAB

35

Average Inventory = $\frac{9,60,000}{3}$ = 3,20,000

(ii) Calculation of Average Collection Period

Average Collection Period = $\frac{\text{Average Receivable}}{\text{Credit Sales}} \times 360$ Opening Receivables - Closing Receivables Where, Average Receivables = 2

Calculation of Closing balance of Receivables

| | ₹ | ₹ |
|-------------------------------|----------|----------|
| Current Assets (2 x 3,00,000) | | 6,00,000 |
| Less: Inventories | 1,00,000 | |
| Less: Marketable Securities | 70,000 | |
| Less: Cash | 50,000 | 2,20,000 |
| Receivables (Closing Balance) | | 3,80,000 |

Now, Average Receivables = $\frac{1,20,000+3,80,000}{2}$ = 2,50,000 So, Average Collection Period = $\frac{2,50,000}{12,00,000} \times 360 = 75 \text{ days}$

Computation of Current Assets and Current Liabilities Current assets = 2.5 **Current liabilities** Current assets = 2.5 Current liabilities Now, Working capital = Current assets - Current liabilities ₹ 5,40,000 = 2.5 Current liability - Current liability Or 1.5 Current liability = ₹ 5,40,000

36

Chapter - 01

 Current Liabilities
 = ₹ 3,60,000

 So, Current Assets
 = ₹ 3,60,000 [] 2.5 = ₹ 9,00,000

(iii) Computation of Proprietary fund; Fixed assets; Capital and Sundry creditors

| Fixed Asset to Proprietary ratio | = Fixed assets Proprietary fund = 0.75 |
|----------------------------------|---|
| Fixed Assets | = 0.75 Proprietary fund |
| Proprietary fund | = Fixed Assets + Net Working Capital - Long Term Debt |
| | = 0.75 Proprietary fund + ₹ 5,40,000 - 0 |
| Proprietary fund | = ₹ 21,60,000 |
| And Fixed Assets | = 0.75 proprietary fund |
| | = 0.75 x ₹ 21,60,000 = ₹ 16,20,000 |
| Capital | = Proprietary fund - Reserves & Surplus |
| | = ₹ 21,60,000 - ₹ 4,80,000 = ₹ 16,80,000 |
| Sundry Creditors | = Current liabilities - Bank overdraft |

You are required to CALCULATE for the year 2020-21:

- (i) Inventory turnover ratio
- (ii) Financial Leverage
- (iii) Return on Capital Employed (after tax)

Ans. Ratios for the year 2020-21

(i) Inventory turnover ratio = $\frac{COGS}{Average Inventory} = \frac{7,38,500}{(87,500+70,000)} = 9.4$

(ii) Financial leverage

$$= \frac{\text{EBIT}}{\text{EBT}} = \frac{33,250}{22,750} = 1.46$$

Working Notes:

1. Total debt = 0.60 × Owner's Equity = 0.60 × ₹ 6,00,000 = ₹ 3,60,000

Further, Current debt to Total debt = 0.40.

So, Current debt = 0.40 × ₹ 3,60,000 = ₹ 1,44,000

Long term debt = ₹ 3,60,000 - ₹ 1,44,000 = ₹ 2,16,000

- 2. Fixed assets = 0.60 × Owner's Equity = 0.60 × ₹ 6,00,000 = ₹ 3,60,000
- 3. Total Assets = Total Liabilities = ₹ 9,60,000

Total assets to turnover = 2 TOimes; Inventory turnover = 8 Times

Hence, Inventory /Total assets = 2/8=1/4, Therefore, Inventory = ₹ 9,60,000/4 = ₹ 2,40,000

Conclusion:

http://tiny.cc/FASTCostFMbyAB

In the last two years, the current ratio and quick ratio are less than the ideal ratio (2:1 and 1:1 respectively) indicating that the company is not having enough resources to meet its current obligations. Receivables are

48

Chapter - 01

By CA Amit Sharma

growing slower. Inventory turnover is slowing down as well, indicating a relative build-up in inventories or increased investment in stock. High Long-term debt to total debt ratio and Debt to equity ratio compared to that of industry average indicates high dependency on long term debt by the company. The net profit ratio is declining substantially and is much lower than the industry norm. Additionally, though the Return on Total Asset(ROTA) is near to industry average, it is declining as well. The interest coverage ratio measures how many times a company can cover its current interest payment with its available earnings. A high interest coverage ratio means that an enterprise can easily meet its interest obligations, however, it is declining in the case of Jensen & Spencer and is also below the industry average indicating excessive use of debt or inefficient operations.

On overall comparison of the industry average of key ratios than that of Jensen & Spencer, the company is in deterioration position. The company's profitability has declined steadily over the period. However, before jumping to the conclusion relying only on the key ratios, it is pertinent to keep in mind the industry, the company dealing in with i.e. manufacturing of pharmaceutical drugs. The pharmaceutical industry is one of the major contributors to the economy and is expected to grow further. After the covid situation, people are more cautious towards their health and are going to spend relatively more on health medicines. Thus, while analysing the loan proposal, both the factors, financial and non-financial, needs to be kept in mind.

Q.33

Average Inventory

MTP Dec 21 (1)

ABC Ltd. has total sales of 10,00,000 all of which are credit sales. It has a gross profit ratio of 25% and a current ratio of 2. The company's current liabilities are ₹ 2,00,000. Further, it has inventories of ₹ 80,000, marketable securities of ₹ 50,000 and cash of ₹ 30,000. From the above information:

- CALCULATE the average inventory, if the expected inventory turnover ratio is three times? (i)
- (ii) Also CALCULATE the average collection period if the opening balance of debtors is expected to be ₹ 1,50,000. Assume 360 days a year.

Ans. (i) Calculation of Average Inventory

Since gross profit is 25% of sales, the cost of goods sold should be 75% of the sales. Cost of goods sold = 10,00,000 x 75/100 = 7,50,000

Inventory Turnover

| Total liabilities | <u>3,00,000</u> | Total Assets | <u>3,00,000</u> | |

Workings:

1. Total debt = 0.50 x Owner's Equity = 0.50 x Rs. 2,00,000 = Rs. 1,00,000

Further, Current debt to Total debt = 0.30

So, Current debt = 0.30 × Rs. 1,00,000 = Rs. 30,000

Long term debt = Rs. 1,00,000 - Rs. 30,000 = Rs. 70,000

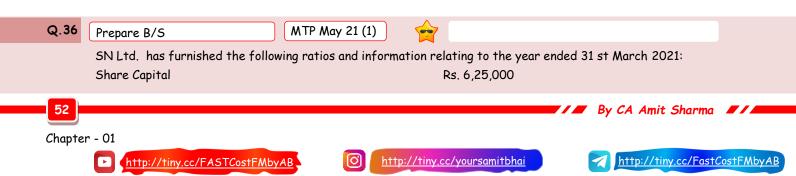

- 2. Fixed assets = 0.60 × Owner's Equity = 0.60 × Rs. 2,00,000 = Rs. 1,20,000
- 3. Total Liabilities = Total Debt + Owner's Equity

= Rs. 1,00,000 + Rs. 2,00,000 = Rs. 3,00,000

Total Assets = Total Liabilities = Rs. 3,00,000

Total assets to turnover = 2 Times; Inventory turnover = 10 Times

Hence, Inventory /Total assets = 2/10=1/5, Therefore Inventory = Rs. 3,00,000/5 = Rs. 60,000

Return on Assets

MTP Nov 19

MNP Limited has made plans for the year 2019 -20. It is estimated that the company will employ total assets of Rs.50,00,000; 30% of assets being financed by debt at an interest cost of 9% p.a. The direct costs for the year are estimated at Rs. 30,00,000 and all other operating expenses are estimated at Rs. 4,80,000. The sales revenue are estimated at Rs. 45,00,000. Tax rate is assumed to be 40%.

- (i) Net profit margin (After tax);
- (ii) Return on Assets (After tax);
- (iii) Asset turnover; and
- (iv) Return on Equity

Ans. The net profit is calculated as follows:

| | Rs. |
|---|-----------|
| Sales Revenue | 45,00,000 |
| Less: Direct Costs | 30,00,000 |
| Gross Profits | 15,00,000 |
| Less: Operating Expense | 4,80,000 |
| Earnings before Interest and tax (EBIT) | 10,20,000 |
| <i>Less</i> : Interest on debt (9% × 15,00,000) | 1,35,000 |
| Earnings before Tax)(EBT) | 8,85,000 |
| <i>Less</i> : Taxes (@ 40%) | 3,54,000 |
| Profit after Tax (PAT) | 5,31,000 |

(i) Net Profit Margin (After Tax)

Net Profit Margin = $\frac{\text{EBIT}(1-t)}{\text{Sales}} \times 100 = \frac{\text{Rs.10}, 20,000 \times (1-0.4)}{\text{Rs.45},00,000} = 13.6\%$

(ii) Return on Assets (ROA) (After tax)

ROA

| = <u>EBIT(1-t)</u> Total Assets | |
|------------------------------------|---|
| Rs.10, 20, 000 (1- 0.4) | Rs.6,12,000 |
| = Rs.50,00,000 | $= \frac{1}{\text{Rs.50,00,000}} = 0.1224 = 12.24 \%$ |

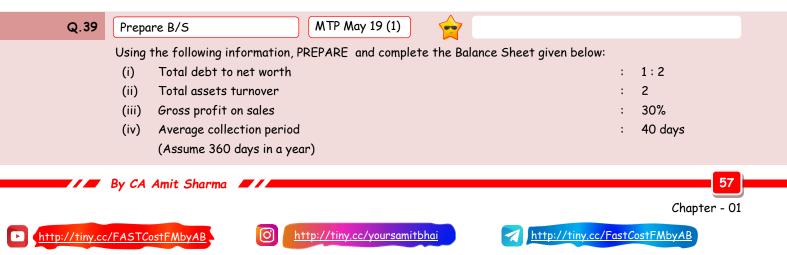

(iii) Asset Turnover

Asset Turnover = $\frac{\text{Sales}}{\text{Assets}}$ = $\frac{\text{Rs.}45,00,000}{\text{Rs.}50,00,000}$ = 0.9

Asset Turnover = 0.9 times

(iv) Return on Equity (ROE)

| Long term debt | 36,000 | Inventory | 40,000 |
| | 1,60,000 | | 1,60,000 |

Working Notes

- 1. Total debt= 0.60 x Equity share capital = 0.60 Rs. 1,00,000 = Rs. 60,000
 - Further,Current debt to total debt = 0.40. So, currentdebt = 0.40 × Rs.60,000 = Rs.24,000, Long term debt= Rs.60,000 - Rs.24,000= Rs. 36,000
- 2. Fixed assets = 0.60 × Equity share Capital = 0.60 × Rs. 1,00,000 = Rs. 60,000
- 3. Total assetsto turnover = 2 Times:Inventory turnover = 8 Times

Hence, Inventory /Total assets= 2/8=1/4, Total assets= Rs. 1,60,000

Ans. Working notes:

(i) Current assets and Current liabilities computation:

 $\frac{\text{Current assets}}{\text{Current liabilities}} = \frac{2.5}{1}$ Or, $\frac{\text{Current assets}}{2.5} = \frac{\text{Current liabilities}}{1} = k (say)$ Or, Current Assets = 2.5 k and Current Liabilities = k
Or, Working capital = (Current Assets [] Current Liabilities) Or, Rs.2,40,000 = k (2.5 [] 1) = 1.5 k
Or, k = Rs.1,60,000
Current Liabilities = Rs. 1,60,000 [] 2.5 = Rs.4,00,000

(ii) Computation of stock

Following information relate to a concern:

| • | |
|--------------------------------|--------------|
| Debtors Velocity | 3 months |
| Credits Velocity | 2 months |
| Stock Turnover Ratio | 1.5 |
| Gross Profit Ratio | 25% |
| Bills Receivables | Rs. 25,000 |
| Bills Payables | Rs. 10,000 |
| Gross Profit | Rs. 4,00,000 |
| Fixed Assets to turnover Ratio | 4 |

Closing stock of the period is Rs. 10,000 above the opening stock. CALCULATE

- (i) Sales and cost of goods sold
- (ii) Sundry Debtors
- (iii) Sundry Creditors
- (iv) Closing Stock
- (v) Fixed Assets

(i) Determination of Sales and Cost of goods sold:

 $Gross \operatorname{Profit} \operatorname{Ratio} = \frac{Gross \operatorname{Profit}}{\operatorname{Sales}} \times 100$ $Or, \frac{25}{100} = \frac{\operatorname{Rs.4,00,000}}{\operatorname{Sales}}$ $Or, \operatorname{Sales} = \frac{\operatorname{Rs.4,00,000}}{25} = \operatorname{Rs.16,00,000}$ $Cost \text{ of Goods Sold} = \operatorname{Sales} - \operatorname{Gross} \operatorname{Profit}$ $= \operatorname{Rs.16,00,000} - \operatorname{Rs.4,00,000} = \operatorname{Rs.12,00,000}$

(ii) Determination of Sundry Debtors:

Debtors velocity is 3 months or Debtors' collection period is 3 months,

So, Debtors' turnover ratio = $\frac{12months}{3months}$ = 4 Debtors' turnover ratio = $\frac{Credit Sales}{Average Accounts Receivable}$ = $\frac{Rs.16,00,000}{Bills Receivable + Sundry Debtors}$ = 4

Or, Sundry Debtors + Bills receivable = Rs. 4,00,000 Sundry Debtors = Rs. 4,00,000 - Rs. 25,000 = Rs. 3,75,000

Determination of Sundry Creditors: (iii) Creditors velocity of 2 months or credit payment period is 2 months. So, Creditors' turnover ratio = $\frac{12\text{months}}{2}$ = 6 2months = Credit Purchases* Average Accounts Payables Creditors turnover ratio Rs.12,10,000 = Sundry Creditors + Bills Payables = 6 So, Sundry Creditors + Bills Payable = Rs. 2,01,667 Or, Sundry Creditors + Rs. 10,000 = Rs. 2,01,667 Or, Sundry Creditors = Rs. 2,01,667 - Rs. 10,000 = Rs. 1,91,667 (iv) **Closing Stock** Stock Turnover Ratio = $\frac{Cost of Goods Sold}{Average Stock} = \frac{Rs.12,00,000}{Average Stock} = 1.5$ So, Average Stock = Rs. 8,00,000 Now Average Stock = Opening Stock + Closing Stock Opening Stock + (Opening Stock + Rs.10,000) = Rs. 8,00,000 Or 2 Or, Opening Stock = Rs. 7,95,000 So, Closing Stock= Rs. 7,95,000 + Rs. 10,000 = Rs. 8,05,000 (v) Calculation of Fixed Assets Fixed Assets Turnover Ratio = $\frac{Cost of Goods Sold}{Fixed Assets}$ = 4 Or, $\frac{\text{Rs.12,00,000}}{\text{Fixed Assets}} = 4$ Or, Fixed Asset = Rs. 3,00,000 Workings: *Calculation of Credit purchases: Cost of goods sold = Opening stock + Purchases - Closing stock Rs. 12,00,000 = Rs. 7,95,000 + Purchases - Rs. 8,05,000 Rs. 12,00,000 + Rs. 10,000 = Purchases Rs. 12,10,000 = Purchases (credit). Assumption: All sales are credit sales (i) All purchases are credit purchase (ii) (iii) Stock Turnover Ratio and Fixed Asset Turnover Ratio may be calculated either on Sales or on Cost of Goods Sold. By CA Amit Sharma

Analysis: The decline in the Gross profit ratio could be either due to a reduction in the selling price or increase in the direct expenses (since the purchase price has remained the same). In this case, cost of goods sold have increased more than proportion of increment in sales & hence impacting gross profit ratio.

Similarly, there is a decline in the ratio of operating expenses to sales. Further analysis reveals that in comparison to increase in sales, there has a lesser proportionate increase in operating expenses. As a result, even the operating profit ratio has remained the same approximately in spite of a decline in the Gross profit ratio.

The company has not been able to deploy its capital efficiently. This is indicated by a decline in the Capital turnover ratio from 3 to 2.54 times.

The decline in stock turnover ratio implies that the company has increased its investment in stock. Net Profit to Net worth ratio has increased indicating that the company's Net worth or Shareholders' capital is efficient in generating profits.

The increase in the Receivables collection period indicates that the company has become liberal in extending credit on sales. There is a corresponding increase in

the receivables also due to such credit policy.

Q.46

ICAI MAT

X Co. has made plans for the next year. It is estimated that the company will employ total assets of ₹8,00,000; 50 per cent of the assets being financed by borrowed capital at an interest cost of 8 per cent per year. The direct costs for the year are estimated at ₹4,80,000 and all other operating expenses are estimated at ₹80,000. The goods will be sold to customers at 150 per cent of the direct costs. Tax rate is assumed to be 50 per cent. You are required to CALCULATE: (i) Operating profit margin (before tax); (ii) net profit margin (after tax); (iii) return on assets (on operating profit after tax); (iv) asset turnover and (v) return on owners' equity.

Ans.

The net profit is calculated as follows:

| Particulars | ₹ |
|---------------------------------------|------------|
| Sales (150% of ₹ 4,80,000) | 7,20,000 |
| Direct costs | (4,80,000) |
| Gross profit | 2,40,000 |
| Operating expenses | (80,000) |
| Profit before Interest and Tax (EBIT) | 1,60,000 |
| Interest changes (8% of ₹ 4,00,000) | (32,000) |
| Profit before taxes | 1,28,000 |
| Taxes (@ 50%) | (64,000) |
| Net profit after taxes | 64,000 |

(i) Operating profit margin = $\frac{\text{EBIT}}{\text{Sales}} = \frac{1,60,000}{7,20,000} = 0.2222 \text{ or } 22.22\%$

- (ii) Net profit margin = $\frac{\text{NetProfit after taxes}}{\text{Sales}} = \frac{64,000}{7,20,000} = 0.89 \text{ or } 8.9\%$
- (iii) Return on assets = $\frac{\text{EBIT}(1 T)}{\text{Assets}} = \frac{1,60,\ 000(1 0.5)}{8,00,000} = 0.10 \text{ or } 10\%$
- (iv) Asset turnover = $\frac{\text{Sales}}{\text{Assets}} = \frac{7,20,000}{8,00,000} = 0.9$ times

(v) Return on equity =
$$\frac{\text{NetProfit after faxes}}{\text{Owners' equity}} = \frac{64,000}{50\% \text{ of ` 8,00,000}}$$

= $\frac{64,000}{4,00,000}$ = 0.16 or 16%

Analysis: The current ratio and quick ratio are less than the ideal ratio (2:1 and 1:1 respectively) indicating that the company is not having enough resources to meet its current obligations.

Receivables are growing slower, although the average collection period is still very reasonable relative to the terms given. Inventory turnover is slowing as well, indicating a relative build-up in inventories. The increase in receivables and inventories, coupled with the fact that net worth has increased very little, has resulted in the total debt-to-net worth ratio increasing to what would have to be regarded on an absolute basis as a high level. Long-term debt to total capitalization has not changed relatively coupled with the fact that retained earnings of only ₹ 50,000 is made in year 2019-20, and there is no issuance of new long-term debt in year 2019-20 and 2020-21.

Both the gross profit and net profit margins have declined substantially. The relationship between the two suggests that the company has incurred more relative expenses. The build-up in inventories and receivables has resulted in a decline in the asset turnover ratio, and this, coupled with the decline in profitability, has resulted in a sharp decrease in the return on assets ratio.

Comments:

- 1. The position of Navya Ltd. is better than the industry norm with respect to Current Ratio and Receivables Turnover Ratio.
- 2. However, the Inventory turnover ratio and Total Asset Turnover ratio is poor comparing to industry norm indicating that company is inefficient to utilize its inventory and assets.
- 3. The firm also has its net profit ratio and return on net worth ratio much lower than the industry norm.
- 4. Total debt to total assets ratio is lower that the industry standard which suggests that the firm is less levered by debt and more by equity resulting in less risky company.
- Q.50 Avg. Inventory

(a)

ICAI MAT

The total sales (all credit) of a firm are ₹ 6,40,000. It has a gross profit margin of 15 per cent and a current ratio of 2.5. The firm's current liabilities are ₹ 96,000; inventories ₹ 48,000 and cash ₹ 16,000.

- (a) DETERMINE the average inventory to be carried by the firm, if an inventory turnover of 5 times is expected? (Assume 360 days a year).
- DETERMINE the average collection period if the opening balance of debtors is intended to be of ₹ (b) 80,000? (Assume 360 days a year).

Ans.

74

Chapter - 01

Inventory turnover = $\frac{Costof goods sold}{Averageinventory}$

Since gross profit margin is 15 per cent, the cost of goods sold should be 85 per cent of the sales. Cost of goods sold = 0.85 × ₹ 6,40,000 = ₹ 5,44,000.

http://tiny.cc/yoursamitbha

Thus, = $\frac{5,44,000}{Average inventory}$ =5

Average inventory = $\frac{5,44,000}{5}$ = ₹ 1,08,800

Average collection period = <u>Average Receivables</u> × 360days (b) Credit Sales (Opening Receivables + Closing Receivables)

Average Receivables =

http://tiny.cc/FASTCostFMbyAB

2

http://tiny.cc/FastCostFMbyAB

Closing balance of receivables is found as follows:

| | ₹ | ₹ |
|---|--------|----------|
| Current assets (2.5 of current liabilities) | | 2,40,000 |
| Less: Inventories | 48,000 | |
| Cash | 16,000 | 64,000 |
| Receivables | | 1,76,000 |

Average Receivables = $\frac{(1, 76, 000 + 80, 000)}{2}$ = ₹ 1,28,000 So, Average collection period = $\frac{(1, 28, 000)}{6,40,000}$ ×360 = 72 days

Working Notes:

(i) Share Capital and Reserves and Surplus

> The return on net worth is 25%. Therefore, the profit after tax of ₹ 3,75,000 should be equivalent to 25% of the net worth.

Net worth ×
$$\frac{25}{100}$$
 = ₹ 3,75,000
Net worth = $\frac{3,75,000}{25}$ × 100 = ₹ 15,00,000

The ratio of share capital to reserves is 7:3

= 15,00,000 x 7 10,50,000 Share Capital Reserves and Surplus = 15,00,000 $\frac{3}{10}$ = ₹ 4,50,000

(ii) Debentures

Ans. Working Notes:

(i) Long term Debt

 $0.5 = \frac{\text{Long} - \text{term debt}}{\text{Net worth}} = \frac{\text{Long} - \text{term debt}}{`1,00,000 + `1,00,000}$

Long term debt = ₹ 1,00,000

(ii) Total assets

Total liabilities and Equity = Notes and payables + Long-term debt + Common stock + Retained earnings = ₹ 1,00,000 + ₹ 1,00,000 + ₹ 1,00,000 + ₹ 1,00,000 = ₹ 4,00,000 Total assets = Total liabilities and Equity = ₹ 4,00,000

(iii) Sales and Cost of Goods sold

| You a | re required to CALCULATE: | |
| (a) | Quick Ratio | |

- (b) Fixed Assets Turnover Ratio
- (c) Proprietary Ratio
- (d) Earnings per Share

Ans. Workings Notes:

| (i) | Computation of Current | Assets & Current Liabilities & Total Assets |
|-----|--------------------------|---|
| | Net Working Capital | = Current Assets - Current Liabilities |
| | | = 2.5 - 1 = 1.5 |
| | Thus, Current Assets | = NetWorking Capital × 2.5 1.5 |
| | | $= \frac{13,50,000 \times 25}{1.5}$ |
| | | = ₹ 22,50,000 |
| | Current Liabilities (CL) | = ₹ 22,50,000 - ₹ 13,50,000 = ₹ 9,00,000 |
| | Total Assets | = Current Assets + Fixed Assets |
| | | = ₹ 22,50,000 + ₹ 30,00,000 = ₹ 52,50,000 |

(ii) Computation of Sales & Cost of Goods Sold

| = Total Assets Turnover × Total Assets |
|--|
| = 2 x (Fixed Assets + Current Assets) |
| = 2 × (₹ 30,00,000 + ₹ 22,50,000) |
| = ₹ 1,05,00,000 |
| = (100% - 20%) of Sales = 80% of Sales |
| = 80% × ₹ 1,05,00,000 = ₹ 84,00,000 |
| |

(iii) Computation of Stock & Quick Assets

0

| Average Stock | $= \frac{Cost \text{ of } Good \text{ Sold}}{Stock Turnover Ratio} = \frac{84,00,000}{7}$ |
|---------------|---|
| | = 12,00,000 |
| Closing Stock | = (Average Stock × 2) – Opening Stock = (₹ 12,00,000 × 2) – ₹ 11,40,000 = ₹ 12,60,000 |

| | Quick Assets | = Current Assets - Closing Stock |
|---------------|-------------------------|---|
| | • | = ₹ 22,50,000 - ₹ 12,60,000 = ₹ 9,90,000 |
| (iv) | Computation of Proprie | tary Fund |
| | Debt-Equity Ratio | $= \frac{\text{Debt}}{\text{Equity}} = \frac{1}{1.5}$ |
| | Or, Equity | = 1.5 Debt |
| | Total Assets | = Equity + Preference capital + Debt + CL |
| | ₹ 52,50,000 | = 1.5 Debt+ ₹ 6,00,000 + Debt + ₹ 9,00,000 |
| | Thus, Debt | = $\frac{37,50,000}{2,5}$ = ₹ 15,00,000 |
| | Equity | = ₹ 15,00,000 × 1.5 |
| | | = ₹ 22,50,000 |
| | So, Proprietary Fund | = Equity + Preference Capital |
| | | = ₹ 22,50,000 + ₹ 6,00,000 |
| | | = ₹ 28,50,000 |
| | | - < 20,00,000 |

(i) ROCE (Pre-tax) =
$$\frac{\text{EBIT}}{\text{Capital employed}} \times 100 = \frac{\text{EBIT}}{\text{Equity} + \text{Debt}} \times 100$$

= $\frac{20,10,000}{(75,00,000 + 55,00,000)} \times 100 = 15.46\%$

EPS (PAT/No. of equity shares) 1.168 or ₹ 1.17

(ii) ROCE is 15.46% and Interest on debt is 10%. Hence, it has a favourable financial leverage.

(iii) Calculation of Operating, Financial and Combined leverages:

 $\begin{aligned} \text{Operating Leverage} &= \frac{Contribution}{EBIT} = \frac{30,10,000}{20,10,000} = 1.497 \text{ (approx.)} \\ \text{Financial Leverage} &= \frac{EBIT}{EBIT} = \frac{20,10,000}{14,60,000} = 1.377 \text{ (approx.)} \\ \text{Combined Leverage} &= \frac{Contribution}{EBIT} = \frac{30,10,000}{14,60,000} = 2.062 \text{ (approx.)} \\ \text{Or, = Operating Leverage \times Financial Leverage} = 1.497 \times 1.377 = 2.06 \text{ (approx.)} \end{aligned}$

- (iv) Operating leverage is 1.497. So, if sales are increased by 10%.
 EBIT will be increased by 1.497 × 10% i.e. 14.97% (approx.)
- (v) Since the combined Leverage is 2.062, sales have to drop by 100/2.062 i.e. 48.50% to bring EBT to Zero. Accordingly, New Sales = ₹ 86,00,000 × (1 - 0.4850) = ₹ 86,00,000 × 0.515 = ₹ 44,29,000 (approx.)

Hence, at ₹ 44,29,000 sales level, EBT of the firm will be equal to Zero.

Information of A Ltd. is given below:

- Earnings after tax: 5% on sales
- Income tax rate: 50%
- Degree of Operating Leverage: 4 times
- 10% Debenture in capital structure: ₹ 3 lakhs
- Variable costs: ₹ 6 lakhs

Required:

(i) From the given data complete following statement:

| Sales | XXXX |
|----------------------|------------|
| Less: Variable costs | ₹ 6,00,000 |
| Contribution | XXXX |
| Less: Fixed costs | XXXX |
| EBIT | XXXX |

| EBT | XXXX |
| Less: Income tax | XXXX |
| EAT | XXXX |

- (ii) Calculate Financial Leverage and Combined Leverage.
- (iii) Calculate the percentage change in earning per share, if sales increased by 5%.

Ans.

(i)

Working Notes

Earning after tax (EAT) is 5% of sales Income tax is 50% So, EBT is 10% of Sales Since Interest Expenses is ₹ 30,000 EBIT = 10% of Sales + ₹30,000 (Equation i) Now Degree of operating leverage = 4 So, $\frac{\text{Contribution}}{\text{EBIT}} = 4$ Or, Contribution = 4 EBIT Or, Sales - Variable Cost = 4 EBIT Or, Sales - ₹ 6,00,000 = 4 EBIT (Equation ii) Replacing the value of EBIT of equation (i) in Equation (ii) We get, Sales - ₹ 6,00,000 = 4 (10% of Sales + ₹ 30,000) Or, Sales - ₹ 6,00,000 = 40% of Sales + ₹ 1,20,000 Or, 60% of Sales = ₹ 7,20,000 So, Sales = $\frac{7,20,000}{60\%}$ =₹ 12,00,000 Contribution = Sales - Variable Cost = ₹ 12,00,000 - ₹ 6,00,000 =₹ 6,00,000 EBIT = $\frac{6,00,000}{4}$ = ₹ 1,50,000 Fixed Cost = Contribution - EBIT = ₹ 6,00,000 - ₹ 1,50,000 = ₹ 4,50,000 EBT = EBIT - Interest = ₹1,50,000 - ₹30,000 = ₹1,20,000

EAT = 50% of ₹ 1,20,000 = ₹ 60,000

Income Statement

(i) Earnings per Share

EPS = $\frac{PAT}{Number of Equity Shares} = \frac{13.05}{0.75} = ₹ 17.40$

It indicates the amount the company earns per share. Investors use this as a guide while valuing the share and making investment decisions. It is also an indicator used in comparing firms within an industry or industry segment.

(ii) Operating Leverage

Operating Leverage = $\frac{\text{Contribution}}{\text{EBIT}} = \frac{30}{24} = 1.25$

It indicates the choice of technology and fixed cost in cost structure. It is level specific. When firm operates beyond operating break-even level, then operating leverage is low. It indicates sensitivity of earnings before interest and tax (EBIT) to change in sales at a particular level.

(iii) Financial Leverage

Financial Leverage = $\frac{\text{EBIT}}{PBT} = \frac{24}{21.75} = 1.103$

The financial leverage is very comfortable since the debt service obligation is small vis -à- vis EBIT.

(iv) Combined Leverage

Combined Leverage = $\frac{\text{Contribution}}{\text{PBT}} = \frac{30}{21.75} = 1.379$

Or,

= Operating Leverage × Financial Leverage

= 1.25 × 1.103 = 1.379

The combined leverage studies the choice of fixed cost in cost structure and choice of debt in capital structure. It studies how sensitive the change in EPS is vis-à-vis change in sales. The leverages operating, financial and combined are used as measurement of risk.

So, percentage change in Taxable Income (EBT) = $\frac{1,00,000}{75,000}$ x 100 = 13.333%, hence verified

(ii) Degree of Operating Leverage = $\frac{Contribution}{EBIT} = \frac{3,00,000}{1,00,000} = 3$ times

So, if sale is increased by 10% then EBIT will be increased by 3 \times 10 = 30%

Earnings before interest and tax after change (EBIT)

Increase in Earnings before interest and tax (EBIT) = ₹ 1,30,000 - ₹ 1,00,000 = ₹ 30,000 So, percentage change in EBIT = $\frac{30,000}{1,00,000}$ x 100 = 30%, hence verified.

Degree of Combined Leverage = $\frac{Contribution}{EBIT} = \frac{3,00,000}{75,000} = 4$ times (iii)

So, if sale is increased by 10% then Taxable Income (EBT) will be increased by 4 × 10 = 40%

Verification

| Particulars | Amount (₹) |
|---|------------|
| New Sales after 10% increase (₹ 5,00,000 + 10%) | 5,50,000 |
| <i>Less</i> : Variable cost (40% of ₹ 5,50,000) | 2,20,000 |

Increase in Earnings before tax (EBT) = ₹ 1,05,000 - ₹ 75,000 = ₹ 30,000

So, percentage change in Taxable Income (EBT) = $\frac{30,000}{75,000} \times 100 = 40\%$, hence verified

The capital structure of ABC Ltd. for the year ended 31st March 2022 consisted as follows:

| Particulars | Amount in ₹ |
|--|-------------|
| Equity share capital (face value ₹ 100 each) | 20,00,000 |
| 10% debentures (₹ 100 each) | 20,00,000 |

During the year 2021-22, sales decreased to 1,00,000 units as compared to 1,20,000 units in the previous year. However, the selling price stood at ₹ 15 per unit and variable cost at ₹ 10 per unit for both the years. The fixed expenses were at ₹ 2,00,000 p.a. and the income tax rate is 30%.

You are required to CALCULATE the following:

- (a) The degree of financial leverage at 1,20,000 units and 1,00,000 units.
- (b) The degree of operating leverage at 1,20,000 units and 1,00,000 units.
- (c) The percentage change in EPS.

Of all the companies, A has the highest degree of Operating Leverage, B has highest degree of Financial Leverage and C is equally leveraged on both Operating and Financial fronts. If we consider combined leverage companies will have the leverages of 12, 15 and 6.25 (by multiplying both operating and financial leverages). This means A is undertaking a higher degree of operating risk while B is undertaking a higher degree of financial risk.

EBIT of the company is expected to be ₹ 52,00,000 p.a.

(i) CALCULATE EPS in each of the above plans.

(ii) ASCERTAIN financial leverage in each plan and comment.

Raise money by Equity or Debt RTP Dec 21

The following particulars relating to Navya Ltd. for the year ended 31st March 2021 is given:

| Output | 1,00,000 units at normal |
|------------------------|--------------------------|
| Selling price per unit | ₹ 40 |
| Variable cost per unit | ₹ 20 |
| Fixed cost | ₹ 10,00,000 |

The capital structure of the company as on 31st March, 2021 is as follows:

| Particulars | ₹ |
|---|-----------|
| Equity share capital (1,00,000 shares of ₹ 10 each) | 10,00,000 |
| Reserves and surplus | 5,00,000 |
| 7% debentures | 10,00,000 |
| Current liabilities | 5,00,000 |
| Total | 30,00,000 |

Navya Ltd. has decided to undertake an expansion project to use the market potential, that will involve ₹ 10 lakhs. The company expects an increase in output by 50%. Fixed cost will be increased by ₹ 5,00,000 and variable cost per unit will be decreased by 10%. The additional output can be sold at the existing selling price without any adverse impact on the market.

The following alternative schemes for financing the proposed expansion programme are planned:

- (i) Entirely by equity shares of ₹ 10 each at par.
- (ii) ₹ 5 lakh by issue of equity shares of ₹ 10 each and the balance by issue of 6% debentures of ₹ 100 each at par.
- (iii) Entirely by 6% debentures of ₹ 100 each at par.

FIND out which of the above-mentioned alternatives would you recommend for Navya Ltd. with reference to the

risk and return involved, assuming a corporate tax of 40%.

From the above figures, we can see that the Operating Leverage is same in all alternatives though Financial Leverage differs. Alternative (iii) uses the maximum amount of debt and result into the highest degree of financial leverage, followed by alternative (ii). Accordingly, risk of the company will be maximum in these options. Corresponding to this scheme, however, maximum EPS (i.e., ₹ 10.02 per share) will be also in option (iii).

So, if Navya Ltd. is ready to take a high degree of risk, then alternative (iii) is strongly recommended. In case of opting for less risk, alternative (ii) is the next best option with a reduced EPS of ₹ 6.80 per share. In case of alternative (i), EPS is even lower than the existing option, hence not recommended.

Leverage **F.A** .

144

EAT (earnings available to equity share holders)

(i) Earnings per share (EPS)
 EPS = 144 crores/10 crore equity shares = ₹ 14.40

(ii) Operating Leverage

Operating leverage = $\frac{Contribution}{EBIT} = \frac{350}{270} = 1.296$

It indicates sensitivity of earnings before interest and tax (EBIT) to change in sales at a particular level.

(iii) Financial Leverage

Financial Leverage = $\frac{\text{EBIT}}{\text{EBT}} = \frac{270}{240} = 1.125$

The financial leverage is very comfortable since the debt service obligation is small vis-à-vis EBIT.

(iv) Combined Leverage

Combined Leverage = $\frac{Contribution}{EBIT} \times \frac{EBIT}{EBT}$ EBIT

Or, Operating Leverage × Financial Leverage = 1.296 × 1.125 = 1.458

The combined leverage studies the choice of fixed cost in cost structure and choice of debt in capital structure. It studies how sensitive the change in EPS is vis-à-vis change in sales.

Q.22 ROI / EPS / OL / FL / CL RTP Nov 18

A firm has sales of ₹ 75,00,000 variable cost is 56% and fixed cost is ₹ 6,00,000. It has a debt of ₹ 45,00,000 at 9% and equity of ₹ 55,00,000. You are required to INTERPRET:

- (i) The firm's ROI?
- (ii) Does it have favourable financial leverage?
- (iii) If the firm belongs to an industry whose capital turnover is 3, does it have a high or low capital turnover?
- (iv) The operating, financial and combined leverages of the firm?
- (v) If the sales is increased by 10% by what percentage EBIT will increase?
- (vi) At what level of sales the EBT of the firm will be equal to zero?
- (vii) If EBIT increases by 20%, by what percentage EBT will increase?

Ans.

| Income Statement | | |
|---|-------------|--|
| Particulars | Amount (₹) | |
| Sales | 75,00,000 | |
| <i>Less:</i> Variable cost (56% of 75,00,000) | (42,00,000) | |
| Contribution | 33,00,000 | |
| Less: Fixed costs | (6,00,000) | |
| Earnings before interest and tax (EBIT) | 27,00,000 | |
| Less: Interest on debt (@ 9% on ₹ 45 lakhs) | (4,05,000) | |
| Earnings before tax (EBT) | 22,95,000 | |

(i) ROI =
$$\frac{\text{EBIT}}{\text{Capital employed}} \times 100 = \frac{\text{EBIT}}{\text{Equity + Debt}} \times 100$$

🛛 By CA Amit Sharma 🗖

109

=
$$\frac{27,00,000}{55,00,000 + 45,00,000} \times 100 = 27\%$$

(ROI is calculated on Capital Employed)

(ii) ROI = 27% and Interest on debt is 9%, hence, it has a favourable financial leverage.

(iii) Capital Turnover = NetSales Capital

Which is very low as compared to industry average of 3.

(iv) Calculation of Operating, Financial and Combined leverages

(a) Operating Leverage = $\frac{Contribution}{EBIT} = \frac{33,00,000}{27,00,000} = 1.22$ (approx)

(b) Financial Leverage =
$$\frac{\text{EBIT}}{\text{EBT}} = \frac{27,00,000}{22,95,000} = 1.18$$
 (approx)

(c) Combined Leverage = $\frac{Contribution}{EBT} = \frac{33,00,000}{22,95,000} = 1.44$ (approx)

Or = Operating Leverage × Financial Leverage = 1.22 × 1.18 = 1.44 (approx)

(v) Operating leverage is 1.22. So if sales is increased by 10%. EBIT will be increased by 1.22 × 10 i.e. 12.20% (approx)

(vi) Since the combined Leverage is 1.44, sales have to drop by 100/1.44 i.e. 69.44% to bring EBT to Zero Accordingly, New Sales = ₹ 75,00,000 × (1-0.6944)

= ₹ 75,00,000 × 0.3056

= ₹ 22,92,000 (approx)

Hence at ₹22,92,000 sales level EBT of the firm will be equal to Zero.

(vii) Financial leverage is 1.18. So, if EBIT increases by 20% then EBT will increase by 1.18 × 20 = 23.6% (approx)

Comment based on Leverage

Comment based on leverage - Company B is better than company A of the following reasons:

Capacity of Company B to meet interest liability is better than that of companies A (from EBIT/ Interest ratio)

$$[A = \frac{40,000}{30,000} = 1.33, B = \frac{1,80,000}{1,20,000} = 1.50]$$

Company B has the least financial risk as the total risk (business and financial) of company B is lower (combined leverage of Company A - 24 and Company B - 9)

(ii) P/V Ratio and EPS

| Operating Leverage = | Contribution Contribution – Fixed Cost |
|--|---|
| 1.4 = | Contribution Contribution - 2,10,000 |
| 1.4 Contribution - 2,94,000 | = Contribution |
| 0.4 Contribution = 2,94,000 | 1 |
| Contribution = 7,35,000 | |
| Now, P/V Ratio = <u>Contribut</u> Sales | $\frac{100}{40,00,000} \times 100 = 18.375\%$ |
| $EPS = \frac{Profitafter tax (PA)}{No. of equity share}$ | $\frac{T)}{s}$ |
| | = Contribution - Fixed Cost - Interest |
| | = 7,35,000 - 2,10,000 - 2,50,000 |
| | = 2,75,000 |
| Profit after tax | = EBT - Tax @ 30% |
| | = 2,75,000 - 82,500 |
| | = 1,92,500 |
| EPS | $=\frac{1,92,500}{2,00,000}=0.9625$ |

(iii) Asset Turnover

Total Assets = Equity Share Capital + Debentures = ₹ 20 lakhs + ₹ 25 lakhs = ₹ 45 lakhs

Asset Turnover = <u>Sales</u> = $\frac{40,00,000}{45,00,000}$ = 0.89

0.89 < 1.6, means lower than industry turnover.

- (iv) EBT zero means 100% reduction in EBT. Since combined leverage is 2.8, sales have to be dropped by 100/2.8 = 35.71%. Hence new sales will be 40,00,000 × (100% 35.71%) = 25,71,600
- (b) Electronic Fund Transfer: With the developments which took place in the information technology, the present banking system has switched over to the computerization of banks branches to offer efficient banking services and cash management services to their customers. The network will be linked to the different branches, banks. This helped the customers in the following ways:
 - (i) Instant updating of accounts.
 - (ii) Quick transfer of funds.
 - (iii) Instant information about foreign exchange rates.

The capital structure of Anshu Ltd. as at 31.3.2019 consisted of ordinary share capital of Rs. 5,00,000 (face value Rs. 100 each) and 10% debentures of Rs. 5,00,000 (Rs. 100 each). In the year ended with March 2019, sales decreased from 60,000 units to 50,000 units. During this year and in the previous year, the selling price was Rs. 12 per unit; variable cost stood at Rs. 8 per unit and fixed expenses were at Rs. 1,00,000 p.a. The income tax rate was 30%.

You are required to CALCULATE the following:

- (i) The percentage of decrease in earnings per share.
- (ii) The degree of operating leverage at 60,000 units and 50,000 units.
- (iii) The degree of financial leverage at 60,000 units and 50,000 units.

Q.40

MTP Nov 18 (2)

From the following, PREPARE Income Statement of Company A and B.

| Company | A | В |
|--|--------------------|-----------|
| Financial leverage | 3:1 | 4:1 |
| Interest | Rs.20,000 | Rs.30,000 |
| Operating leverage | 4:1 | 5:1 |
| Variable Cost as a Percentage to Sales | 66 $\frac{2}{3}$ % | 75% |
| Income tax Rate | 45% | 45% |

Ans.

| Company A | |
|--|-----|
| Financial leverage = $\frac{\text{EBIT}}{\text{EBT}} = \frac{3}{1} = Or$, EBIT = 3× EBT | (1) |
| Again EBIT - Interest = EBT | |
| Or, EBIT- 20,000 = EBT | (2) |
| Taking (1) and (2) we get | |
| 3 EBT- 20,000 = EBT | |
| Or, 2 EBT = 20,000 or EBT = Rs.10,000 | |
| Hence EBIT = 3EBT = Rs.30,000 | |
| Again, we have operating leverage = $\frac{Contribution}{EBIT} = \frac{4}{1}$ | |
| EBIT = Rs. 30,000, hence we get | |
| Contribution = 4 × EBIT = Rs.1,20,000 | |
| Now variable cost = $66\frac{2}{3}$ % on sales | |
| Contribution = $100 - 66 \frac{2}{3} \%$ i.e. $33 \frac{1}{3} \%$ on sales | |
| Hence, sales = $\frac{1,20,000}{33\frac{1}{3}\%}$ = Rs. 3,60,000 | |
| Same way EPTT EPT contribution and sales for company P can be worked out | |

Same way EBIT, EBT, contribution and sales for company B can be worked out.

Company B

Financial leverage =
$$\frac{\text{EBIT}}{\text{EBT}} = \frac{4}{1}$$
 or EBIT = 4 EBT (3)

Again EBIT - Interest = EBT or EBIT - 30,000 = EBT(4)Taking (3) and (4) we get, 4EBT- 30,000 = EBT(7)Or, 3EBT = 30,000 Or, EBT=10,000(9)Hence, EBIT = $4 \times EBT = 40,000$ (9)Again, we have operating leverage = $\frac{Contribution}{EBIT} = \frac{5}{1}$

EBIT= 40,000; Hence we get contribution = $5 \times EBIT = 2,00,000$ Now variable cost =75% on sales Contribution = 100- 75% i.e. 25% on sales Hence Sales = $\frac{2,00,000}{2} = Rs. 8,00,000$

NSG Ltd. has a sale of Rs.75,00,000, variable cost of Rs.42,00,000 and fixed cost of Rs.6,00,000.

The Present capital structure of NSG is as follows:

| Equity Shares | Rs. 55,00,000 |
|---------------|-----------------|
| Debt (12%) | Rs. 45,00,000 |
| Total | Rs. 1,00,00,000 |

- (i) DETERMINE the ROCE of NSG Ltd.
- (ii) Does NSG have a favourable financial leverage? ANALYSE.
- (iii) If the industry average of asset turnover is 3, does it have a high or low asset leverage? DETERMINE
- (iv) COMPUTE the leverages of NSG?
- (v) DETERMINE, at what level of sales, will the EBT be zero?

Ans.

(i)

ROCE = $\frac{\text{EBIT}}{\text{Captial employed}} = \frac{\text{Rs. 27,00,000}}{\text{Rs.1,00,00,000}} \times 100 = 27\%$

Workings:

| (I) Calculation of EBT: | Rs. |
|--|-----------|
| Sales | 75,00,000 |
| Less: Variable costs | 42,00,000 |
| Contribution | 33,00,000 |

| EBT | 21,60,000 |

🖊 🖉 By CA Amit Sharma

first attempt success tutorial:

Capital employed = Debt + Equity Shares = Rs. 1,00,00,000.

- (ii) Since ROCE (27%) is higher than the interest payable on debt (12%). NSG has a favourable financial leverage.
- (iii) Capital employed = Total assets = Rs. 1,00,00,000Net sales = Rs.75,00,000

Therefore, turnover ratio $= \frac{\text{Rs. 75,00,000}}{\text{Rs. 1,00,00,000}} = 0.75$

The industry average is 3 against NSG's ratio of 0.75. Hence NSG Ltd. has very low asset leverage.

- (iv) Operating leverage = $\frac{Contribution}{EBIT} = \frac{Rs.33,00,000}{Rs.27,00,000} = 1.22$ Financial Leverage = $\frac{EBIT}{EBT} = \frac{Rs.27,00,000}{Rs.21,60,000} = 1.25$ Combined leverage = $\frac{Contribution}{EBT} = \frac{Rs.33,00,000}{Rs.21,60,000} = 1.53$ Or DCL = DOL × DFL = 1.22 × 1.25 = 1.53
- (v) For EBT to become zero, a 100% reduction in the EBT is required. As the combined leverage is 1.53, sales have to drop approx. by 100/1.53 = 65.36%. Hence, the new sales will be: Rs. 75,00,000 × (1 - 0.6536) = Rs. 25,98,000 (approx.)

| | (i) Operating Leverage; | |
| | (ii) Combined leverage; and | |
| | (iii) Earnings per share. | |
| | (Show calculations upto two decimal points.) | |

Ans. Computation of Profits after Tax (PAT)

| Particulars | Amount (₹) |

(i) Operating Leverage:

= $\frac{Contribution}{EBIT}$ = $\frac{23,14,200}{16,18,200}$ ₹ = 1.43

(ii) Combined Leverage:

= Operating Leverage × Financial Leverage = 1.43 × 1.49 = 2.13 Or, Combined Leverage = $\frac{Contribution}{EBIT} \times \frac{EBIT}{EBT}$ Or, Combined Leverage = $\frac{Contribution}{EBT} = \frac{23,14,200}{10,86,040} = 2.13$ *Financial Leverage = $\frac{EBIT}{EBT} = \frac{16,18,200}{EBT} = 1.49$ So, $EBT = \frac{16,18,200}{1.49} = ₹10,86,040$

Accordingly, other fixed interest = ₹16,18,200 - ₹ 10,86,040 - ₹ 4,44,000 = ₹ 88,160

(iii) Earnings per share (EPS):

The operating leverage exists only when there are fixed costs. In the case of firm D, there is no magnified effect on the EBIT due to change in sales. A 20 per cent increase in sales has resulted in a 20 per cent increase in EBIT. In the case of other firms, operating leverage exists. It is maximum in firm A, followed by firm C and minimum in firm B. The interception of DOL of 7 is that 1 per cent change in sales results in 7 per cent change in EBIT level in the direction of the change of sales level of firm A.

|---|-----------|
| EBIT (Earnings before Interest and Tax) | 31,50,000 |
| Earnings before Tax (EBT) | 14,00,000 |

Ans. Operating Leverage (OL)

% change in EPS

 $= \frac{Contribution}{EBIT} = \frac{EBIT + Fixed Cost}{EBIT} = \frac{31,50,000 + 1,57,500}{31,50,000} = 1.05$

Financial Leverage (FL)

 $= \frac{\mathsf{EBIT}}{\mathsf{EBT}} = \frac{31,50,000}{14,00,000} = 2.25$

Combined Leverage (CL)

= 1.05 x 2.25 = 2.3625

Percentage Change in Earnings per share

DCL= $\frac{\text{\%change in EPS}}{\text{\%change inSales}}$ = 2.3625 = $\frac{\text{\%change in EPS}}{10}$

% change in EPS = 23.625% Hence, if sales increases by 10%, EPS will be increased by 23.625%.

1. Operating Leverage =
$$\frac{Contribution}{EBIT}$$

$$= \frac{150 \times 2,500}{\mathsf{EBIT}} = \frac{3,75,000}{\mathsf{EBIT}} = 6$$

EBIT = $\frac{3,75,000}{6}$ ₹ = ₹ 62,500

Operating Leverage (OL) x Financial Leverage (FL)= Combined Leverage (CL)
 6 x Financial Leverage = 24
 Financial Leverage = 4

Also, Financial Leverage = $\frac{\text{EBIT}}{\text{EBT}}$ = 4

$$\frac{\text{EBT}}{4} = \frac{\text{EBIT}}{4} = \frac{62,500}{4} = ₹15,625$$

Computation of Earnings after tax Earnings after Tax (EAT) = EBT (1 - t)

Earnings after Tax (EAT) = ₹ 10,938

₹ 4,00,000 = ₹ 10,00,000 - Fixed Cost Fixed Cost = ₹ 10,00,000 - ₹ 4,00,000 = ₹ 6,00,000

(ii) Calculation of Degree of Combined Leverage (DCL)

Question says that 25% change in sales will wipe out EPS. Here, wipe out means it will reduce EPS by 100%.

 $DCL = \frac{Percentage Change in EPS}{PercentageChange in Sales} = \frac{100\%}{25\%} = 4$

(iii) Calculation of Degree of Financial Leverage (DFL)
 DCL = DOL × DFL
 4 = 2.5 × DFL

So, DFL = 1.6

(iv) Calculation of Interest and amount of Debt

DFL = $\frac{\text{EBIT}}{\text{EBIT} - \text{Int}}$ Or, 1.6 = $\frac{4,00,000}{4,00,000 - \text{Int}}$ Or, Int = ₹ 1,50,000

Debt x Interest rate= Amount of InterestDebt x 16%= ₹ 1,50,000Debt= ₹ 9,37,500

(v) Calculation of Earnings per share (EPS)

EPS =
$$\frac{(\text{EBIT}-\text{Int})(1-\text{t})}{N} = \frac{(`4,00,000 - `1,50,000)0.5}{1,00,000} = ₹ 1.25$$

ICAI MAT 🚽 🔶

The following details of a company for the year ended 31st March are given below:

| Operating | 2:1 |
|-----------------------------------|---------------|
| leverage | |
| Combined leverage | 2.5:1 |
| Fixed Cost excluding interest | ₹ 3.4 lakhs |
| Sales | ₹ 50 lakhs |
| 8% Debentures of ₹ 100 each | ₹ 30.25 lakhs |
| Equity Share Capital of ₹ 10 each | 34 lakhs |
| Income Tax Rate | 30% |

CALCULATE:

- (i) Financial Leverage
- (ii) P/V ratio and Earning per Share (EPS)
- (iii) If the company belongs to an industry, whose assets turnover is 1.5, does it have a high or low assets turnover?
- (iv) At what level of sales, the Earning before Tax (EBT) of the company will be equal to zero?

🖊 🔳 By CA Amit Sharma 🖉

http://tiny.cc/FastCostFMbyAB

(i)

Ans.

Financial leverage

| Combined Leverage | = Operating Leverage (OL) × Financial Leverage (FL) |
|--------------------|---|
| 2.5 | = 2 x FL |
| Or, FL | = 1.25 |
| Financial Leverage | = 1.25 |

(ii) P/V Ratio and Earning per share (EPS)

| Operating lowers | ge = $\frac{Contribution(C)}{Contribution - Fixed Cost (FC)}$ |
|------------------|---|
| Operating levera | $\frac{1}{Contribution - Fixed Cost (FC)}$ |
| 2 | $= \frac{C}{C - 3,40,000}$ |
| Or,C | = 2 (<i>C</i> - 3,40,000) |
| Or,C | = 2 <i>C</i> - 6,80,000 |
| Or, Contribution | = ₹ 6,80,000 |
| Now, P/V ratio | $= \frac{Contribution(C)}{Sales(S)} \times 100$ |
| | $= \frac{6,80,\ 000}{50,00,000} \times 100 = 13.6\%$ |
| Therefore, P/V F | Ratio = 13.6% |
| EBT = Sale | s - Variable Cost - Fixed Cost - Interest |
| = ₹50, | 00,000 - ₹50,00,000 (1-0.136) - ₹3,40,000 - (8% × ₹30,25,000) |
| = ₹ 50 | ,00,000 - ₹ 43,20,000 - ₹ 3,40,000 - ₹ 2,42,000 |
| = ₹ 98 | ,000 |
| | |

PAT = EBT(1-T)= ₹ 98,000(1-0.3) = ₹ 68,600

$$EPS = \frac{Profit after tax}{No.of equity shares}$$

(iii) Assets turnover

Assets turnover =
$$\frac{Sales}{Total Assets *}$$

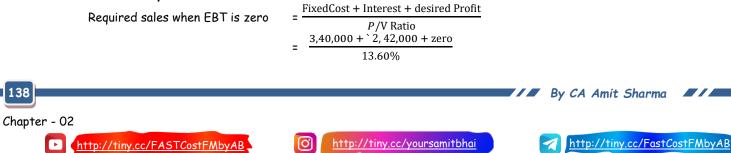

= $\frac{50,00,000}{34,00,000+30,25,000} = 0.78$

0.78 < 1.5 means lower than industry turnover. *Total Asset = Equity share capital + 8% Debentures

(iv) EBT zero means 100% reduction in EBT. Since combined leverage is 2.5, sales have to be dropped by 100/2.5 = 40%. Hence new sales will be ₹ 50,00,000 [] (100 - 40) % = ₹ 30,00,000. Therefore, at ₹ 30,00,000 level of sales, the Earnings before Tax (EBT) of the company will be zero.

Alternatively

138

= 5,82,000 13.60% = ₹ 42,79,412

[Note: The question can also be solved by first calculating EBIT with the help of Financial Leverage. Accordingly, answer to the requirement (ii) and (iv) will also vary.

| | 9% Preference share capital (₹ 100 each) | 12,00,000 | |
| | 12% Long-term loan | 10,00,000 | |
| | Interest coverage | 8 | |
| | ratio Income tax rate | 30% | |
| | Price – earnings ratio | 25 | |

The company is proposed to take up an expansion plan, which requires an additional investment of ₹ 34,50,000. Due to this proposed expansion, earnings before interest and taxes of the company will increase by ₹ 6,15,000 per annum. The additional fund can be raised in following manner:

- By issue of equity shares at present market price, or
- By borrowing 16% Long-term loans from bank.

You are informed that Debt-equity ratio (Debt/ Shareholders' fund) in the range of 50% to 80% will bring down the price-earnings ratio to 22 whereas; Debt-equity ratio over 80% will bring down the price-earnings ratio to 18.

Required:

Working notes:

Advise which option is most suitable to raise additional capital so that the Market Price per Share (MPS) is maximized.

Ans.

(i) Interest Coverage ratio = 8

 $\frac{\text{EBIT}}{\text{Interest}} = 8$ $\frac{\text{EBIT}}{1,20,000} = 8$ So, EBIT = ₹ 9,60,000

(ii) Proposed Earnings Before Interest & Tax = 9,60,000 + 6,15,000 = ₹ 15,75,000

Option 1: Equity option

Debt = ₹ 10,00,000 Shareholders Fund = 8,00,000+20,00,000+12,00,000+34,50,000 = ₹ 74,50,000 Debt Equity ratio(Debt/Shareholders fund) = $\frac{10,00,000}{74,50,000}$ = 13.42%

P/E ratio in this case will be 25 times

Option 2: Debt option

Debt = 10,00,000+34,50,000 = ₹ 44,50,000 Shareholders Fund = 8,00,000+20,00,000+12,00,000 = ₹ 40,00,000

Debt Equity ratio(Debt/Shareholders fund) = $\frac{44,50,000}{40,00,000}$ = 111.25%

Debt equity ratio has crossed the limit of 80% hence PE ratio in this case will remain at 18 times. Number of Equity Shares to be issued = ₹ 34,50,000/ ₹ 150 = 23,000

(2) Earnings before interest and tax (EBIT) = 4,50,000

(3) Return on Capital Employed (ROCE):

ROCE = $\frac{\text{EBIT}}{\text{Capital employed}} \times 100 = \frac{4,50,000}{30,00,000} \times 100 = 15\%$

 (4) Earnings before interest and tax (EBIT) after expansion scheme: After expansion, capital employed Desired EBIT

Q.4

EPS / Fin. BEP / Indifference

PY Nov 20

J Ltd. is considering three financing plans. The-key information is as follows:

- (a) Total investment to be raised ₹ 4,00,000.
- (b) Plans showing the Financing Proportion:

| Plans | Equity | Debt | Preference Shares |
|-------|--------|------|-------------------|
| X | 100% | - | - |
| У | 50% | 50% | - |
| Ζ | 50% | - | 50% |

(c) Cost of Debt

10% Cost of preference shares 10% 50%

- (d) Tax Rate
- (e) Equity shares of the face value of ₹10 each will be issued at a premium of ₹ 10 per share.
- (f) Expected EBIT is ₹ 1,00,000.

You are required to compute the following for each plan :

- (i) Earnings per share (EPS)
- (ii) Financial break even point
- (iii) Indifference Point between the plans and indicate if any of the plans dominate.(10 Marks)

Ans

(i)

Computation of Earnings per Share (EPS)

| Plans | X (₹) | Y (₹) | Z (₹) |
|---|----------|----------|----------|
| Earnings before interest & tax (EBIT) | 1,00,000 | 1,00,000 | 1,00,000 |
| Less: Interest charges (10% of ₹ 2,00,000) | | (20,000) | |
| Earnings before tax (EBT) | 1,00,000 | 80,000 | 1,00,000 |
| <i>Less:</i> Tax @ 50% | (50,000) | (40,000) | (50,000) |
| Earnings after tax (EAT) | 50,000 | 40,000 | 50,000 |
| Less: Preference share dividend (10% of ₹2,00,000) | | | (20,000) |
| Earnings available for equity shareholders (A) | 50,000 | 40,000 | 30,000 |

| No. of equity shares (B) Plan X = ₹ | 20,000 | 10,000 | 10,000 |
|-------------------------------------|--------|--------|--------|
| 4,00,000/ ₹ 20 | | | |
| Plan Y = ₹ 2,00,000 / ₹ 20 | | | |
| Plan Z = ₹ 2,00,000 / ₹ 20 | | | |
| E.P.S (A B) | 2.5 | 4 | 3 |

(ii) Computation of Financial Break-even Points

Financial Break-even point = Interest + Preference dividend/(1 - tax rate) Proposal 'X' = 0 Proposal 'Y' = ₹ 20,000 (Interest charges) Proposal 'Z' = Earnings required for payment of preference share dividend = ₹ 20,000 ÷ (1-0.5 Tax Rate) = ₹ 40,000

(iii) Computation of Indifference Point between the plans Combination of Proposals

0.5 EBIT

EBIT

- (a) Indifference point where EBIT of proposal "X" and proposal 'Y' is equal $\frac{(EBIT)(1-0.5)}{20,000 \text{ shares}} = \frac{(EBIT 20,000)(1-0.5)}{10,000 \text{ shares}}$
- (b) Indifference point where EBIT of proposal 'X' and proposal 'Z' is equal:

 $\frac{(EBIT)(1-0.5)}{20,000 \text{shares}} = \frac{EBIT(1-0.5) - 20,000}{10,000 \text{shares}}$ 0.5 EBIT = EBIT - ₹ 40,000 0.5 EBIT = ₹ 40,000 $EBIT = \frac{40,000}{0.5} = ₹ 80,000$

= EBIT - ₹ 20,000

= ₹ 40.000

(c) Indifference point where EBIT of proposal 'Y' and proposal 'Z' are equal

 $\frac{(\mathsf{EBIT} - 20,000)(1 - 0.5)}{10,000 \text{ shares}} = \frac{\mathsf{EBIT}(1 - 0.5) - 20,000}{10,000 \text{ shares}}$ 0.5 EBIT - ₹ 10,000 = 0.5 EBIT - ₹ 20,000

There is no indifference point between proposal 'Y' and proposal 'Z'

Analysis: It can be seen that financial proposal 'Y' dominates proposal 'Z', since the financial break-evenpoint of the former is only ₹ 20,000 but in case of latter, it is ₹ 40,000. EPS of plan 'Y' is also higher.

Q.5

Form of Financing to choose PY Nov 18

Y Limited requires ₹ 50,00,000 for a new project. This project is expected to yield earnings before interest and taxes of ₹ 10,00,000. While deciding about the financial plan, the company considers the objective of maximizing earnings per' share. It has two alternatives to finance the project - by raising debt ₹ 5,00,000 or ₹ 20,00,000 and the balance, in each case, by issuing Equity Shares. The company's share is currently selling at ₹ 300, but is expected to decline to ₹ 250 in case the funds are borrowed in excess of ₹ 20,00,000. The funds can be borrowed at the rate of 12 percent upto ₹ 5,00,000 and at 10 percent over ₹ 5,00,000. The tax rate applicable to the company is 25 percent. Which form of financing should the company choose?

Ans

| 5. | Plan I | = | Raising Debt of Rs 5 lakh + Equity of Rs 45 lakh. |
|----|---------|---|---|
| | Dian TT | _ | Dairing Nabt of ₹ 20 lakh + Equity of ₹ 30 lakh |

Plan II = Raising Debt of ₹ 20 lakh + Equity of ₹ 30 lakh.

Calculation of Earnings per share (EPS)

| | Financial Plans | | |
|-----------------------------------|-----------------|------------|--|
| Particulars | Plan I | Plan II | |
| | ₹ | ₹ | |
| Expected EBIT | 10,00,000 | 10,00,000 | |
| Less: Interest (Working Note 1) | (60,000) | (2,10,000) | |
| Earnings before taxes | 9,40,000 | 7,90,000 | |
| Less: Taxes @ 25% | (2,35,000) | (1,97,500) | |
| Earnings after taxes (EAT) | 7,05,000 | 5,92,500 | |
| Number of shares (Working Note 2) | 15,000 | 10,000 | |
| Earnings per share (EPS) | 47 | 59.25 | |

Financing Plan II (i.e. Raising debt of \mathbf{T} 20 lakh and issue of equity share capital of \mathbf{T} 30 lakh) is the option which maximises the earnings per share.

Working Notes:

1. Calculation of interest on Debt.

| Plan I | (₹ 5,00,000 × 12%) | | ₹ 60,000 |
|---------|---------------------|-----------|------------|
| Plan II | (₹ 5,00,000 × 12%) | ₹60,000 | ₹ 2,10,000 |
| | (₹ 15,00,000 × 10%) | ₹1,50,000 | |

2. Number of equity shares to be issued

Plan I: $\frac{\text{Rs. 45, 00, 000}}{\text{Rs. 300 (MarketPrice of share)}} = 15,000 \text{ shares}$ Plan II: $\frac{\text{Rs. 30, 00, 000}}{\text{Rs. 300 (Market Price of share)}} = 10,000 \text{ shares}$

(*Alternatively, interest on Debt for Plan II can be 20,00,000 X 10% i.e. ₹ 2,00,000. accordingly, the EPS for the Plan II will be ₹60)

Q.6 EPS / Fin. BEP / Indifference

Sun Ltd. is considering two financing plans. Details of which are as under:

- (i) Fund's requirement ₹ 100 Lakhs
- (ii) Financial Plan

| Plan | Equity | Debt |

You are required to compute:

- (i) EPS in each of the plan
- (ii) The Financial Break Even Point
- (iii) Indifference point between Plan I and II

Computation of Earnings Per Share (EPS)

| Plans | I (₹) | II (₹) |
|--|-------------|------------|
| Earnings before interest & tax (EBIT) | 40,00,000 | 40,00,000 |
| Less: Interest charges (12% of ₹75 lakh) | | (9,00,000) |
| Earnings before tax (EBT) | 40,00,000 | 31,00,000 |
| Less: Tax @ 30% | (12,00,000) | (9,30,000) |
| Earnings after tax (EAT) | 28,00,000 | 21,70,000 |
| No. of equity shares (@ ₹10+₹15) | 4,00,000 | 1,00,000 |
| E.P.S (₹) | 7.00 | 21.70 |

(ii) Computation of Financial Break-even Points

Plan 'I' = 0 - Under this plan there is no interest payment, hence the financial break - even point will be zero.

Plan 'II' = ₹ 9,00,000 - Under this plan there is an interest payment of ₹9,00,000, hence the financial break -even point will be ₹9 lakhs

(iii) Computation of Indifference Point between Plan I and Plan II:

Indifference point is a point where EBIT of Plan-I and Plan-II are equal. This can be calculated by applying the following formula:

{(EBIT -I1) (1- T)} / E1 = {(EBIT -I2) (1- T)} / E2

So $\frac{\text{EBIT}(1-0.3)}{4,00,000 \text{shares}} = \frac{(\text{EBIT} - `9,00,000)(1-0.3)}{1,00,000 \text{shares}}$

Or, 2.8 EBIT - 25,20,000 = 0.7EBIT Or, 2.1EBIT = 25,20,000 EBIT =12,00,000

Q.7 Calculate new MPS RTP Nov 23

The company has reserves and surplus of ₹ 7,50,000 and required ₹ 5,00,000 further for modernisation. Return on Capital Employed (ROCE) is constant. Debt (Debt/ Debt + Equity) Ratio higher than 40% will bring the P/E

| Price/ Earnings (P/E) Ratio (refer working note 3) | 8 | 10 |
| Probable Price Per Share (PE Ratio × EPS) | ₹ 46.40 | ₹ 50 |

Working Notes:

1. Calculation of existing Return of Capital Employed (ROCE):

| | (₹) |
|--|-----------|
| Equity Share capital (25,000 shares × ₹10) | 2,50,000 |
| 10% Debentures $\left(50,000 \times \frac{100}{10}\right)$ | 5,00,000 |
| Reserves and Surplus | 7,50,000 |

| $ROCE = \frac{3,\ 00,\ 000}{15,00,000} \times 100$ | 20% |

2. Number of Equity Shares to be issued in Plan-II:

= <u>`5,00,000</u> = 10,000 Shares

Thus, after the issue total number of shares = 25,000+ 10,000 = 35,000 shares

3. Debt/Equity Ratio if ₹ 5,00,000 is raised as debt:

 $= \frac{10,00,000}{20,00,000} \times 100 = 50\%$

As the debt equity ratio is more than 40% the P/E ratio will be brought down to 8 in Plan-I

Q.11 Indifference Point

CALCULATE the level of earnings before interest and tax (EBIT) at which the EPS indifference point between the following financing alternatives will occur.

(i) Equity share capital of ₹60,00,000 and 12% debentures of ₹40,00,000.

RTP May 20

Or (ii) Equity share capital of ₹40,00,000, 14% preference share capital of ₹20,00,000 and 12% debentures of ₹40,00,000.

Assume the corporate tax rate is 35% and par value of equity share is ₹100 in each case.

Ans. Computation of level of earnings before interest and tax (EBIT) In case, alternative (i) is accepted, then the EPS of the firm would be:

 $EPS_{Alternative (i)} = \frac{(EBIT - Interest) (1 - tax rate)}{No.of equity shares}$

 $= \frac{(\mathsf{EBIT} - 0.12 \times 40, \ 00, \ 000) \ (1 - 0.35)}{60,000 \ \mathsf{shares}}$

In case, alternative (ii) is accepted, then the EPS of the firm would be:

In order to determine the indifference level of EBIT, the EPS under the two alternative plans should be equated as follows:

| (EBIT - 0.12 × 40, 00, 000)(1 - | 0.35) (EBIT - 0.12 × 40, 00, 000)(1 - 0.35) - (0.14 × 20,00, 000) |

The management of RT Ltd. wants to raise its funds from market to meet out the financial demands of its longterm projects. The company has various combinations of proposals to raise its funds. You are given the following proposals of the company:

| Proposal | Equity shares (%) | Debts (%) | Preference shares (%) |
|----------|-------------------|-----------|-----------------------|
| Р | 100 | - | - |
| Q | 50 | 50 | - |
| R | 50 | _ | 50 |

- (i) Cost of debt and preference shares is 12% each.
- (ii) Tax rate -40%
- (iii) Equity shares of the face value of ₹10 each will be issued at a premium of ₹10 per share.
- (iv) Total investment to be raised ₹8,00,00,000.
- (v) Expected earnings before interest and tax ₹3,60,00,000.

From the above proposals the management wants to take advice from you for appropriate plan after computing the following:

- Earnings per share
- Financial break-even-point

COMPUTE the EBIT range among the plans for indifference.

Total Capital Employed Earnings before interest and tax (EBIT) (given) ROCE = $\frac{2, 80, 000}{14,00,000} \times 100$

14,00,000 2,80,000 20%

2. Number of Equity Shares to be issued in Plan-II:

 $= \frac{4,\ 00,\ 000}{40} \times 10,000 \text{ shares}$

Thus, after the issue total number of shares = 30,000+ 10,000 = 40,000 shares

3. Debt/Equity Ratio if ₹ 4,00,000 is raised as debt:

 $= \frac{8,00,000}{18,00,000} \times 100 = 44.44\%$

As the debt equity ratio is more than 40% the P/E ratio will be brought down to 8 in Plan-I

A Company earns a profit of ₹7,00,000 per annum after meeting its interest liability of ₹1,00,000 on 10% debentures. The Tax rate is 40%. The number of Equity Shares of ₹10 each are 1,00,000 and the retained earnings amount to ₹20,00,000. The company proposes to take up an expansion scheme for which a sum of ₹10,00,000 is required. It is anticipated that after expansion, the company will be able to achieve the same return on investment as at present. The funds required for expansion can be raised either through debt at the rate of 12% or by issuing equity shares at par.

Required:

- (i) COMPUTE the Earnings per Share (EPS), if:
 - > The additional funds were raised as debt
 - > The additional funds were raised by issue of equity shares.
- (ii) ADVISE the company as to which source of finance is preferable.

Axar Ltd. has a Sales of ₹ 68,00,000 with a Variable cost Ratio of 60%.

The company has fixed cost of ₹16,32,000. The capital of the company comprises of 12% long term debt, ₹1,00,000 Preference Shares of ₹ 10 each carrying dividend rate of 10% and 1,50,000 equity shares.

The tax rate applicable for the company is 30%.

At current sales level, DETERMINE the Interest, EPS and amount of debt for the firm if a 25% decline in Sales will wipe out all the EPS.

Break Even Sales = ₹ 6800000×0.75 = ₹ 51,00,000 Ans.

Q.20

Calculate New EPS

MTP May 22(2)

- (a) The Modern Chemicals Ltd. requires ₹ 25,00,000 for a new plant. This plant is expected to yield earnings before interest and taxes of ₹ 5,00,000. While deciding about the financial plan, the company considers the objective of maximising earnings per share. It has three alternatives to finance the project- by raising debt of ₹ 2,50,000 or ₹ 10,00,000 or ₹ 15,00,000 and the balance, in each case, by issuing equity shares. The company's share is currently selling at ₹ 150, but is expected to decline to ₹ 125 in case the funds are borrowed in excess of ₹ 10,00,000. The funds can be borrowed at the rate of 10% upto ₹ 2,50,000, at 15% over ₹ 2,50,000 and upto ₹ 10,00,000 and at 20% over ₹ 10,00,000. The tax rate applicable to the company is 50%. ANALYSE, which form of financing should the company choose?
- (b) "Operating risk is associated with cost structure, whereas financial risk is associated with capital structure of a business concern." Critically EXAMINE this statement.

So, the earning per share (EPS) is higher in alternative II i.e. if the company finance the project by raising debt of \gtrless 10,00,000 and issue equity shares of \gtrless 15,00,000. Therefore, the company should choose this alternative to finance the project.

Working Note:

| Number of equity share: (A)/(B) | 15,000 | 10,000 | 8,000 |

(b) "Operating risk is associated with cost structure whereas financial risk is associated with capital structure of a business concern".

Operating risk refers to the risk associated with the firm's operations. It is represented by the variability of earnings before interest and tax (EBIT). The variability in turn is influenced by revenues and expenses, which are affected by demand of firm's products, variations in prices and proportion of fixed cost in total cost. If there is no fixed cost, there would be no operating risk. Whereas financial risk refers to the additional risk placed on firm's shareholders as a result of debt and preference shares used in the capital structure of the concern. Companies that issue more debt instruments would have higher financial risk than companies financed mostly by equity.

Q.21 Indifference Point MTP Dec 21(2)
ABC Limited is setting up a project with a capital outlay of ₹ 90,00,000. It has two alternatives in financing the project cost.
Alternative-I: 100% equity finance by issuing equity shares of ₹ 10 each
Alternative-II: Debt-equity ratio 2:1 (issuing equity shares of ₹ 10 each)
The rate of interest payable on the debts is 18% p.a. The corporate tax rate is 30%. CALCULATE the indifference point between the two alternative methods of financing.
Ans. Calculation of Indifference point between the two alternatives of financing.

By CA Amit Sharma

Alternative-I By issue of 9,00,000 equity shares of ₹10 each amounting to ₹90 lakhs. No financial charges are involved.

Alternative-II By raising the funds in the following way: Debt = ₹ 60 lakhs

Equity = ₹ 30 lakhs (3,00,000 equity shares of ₹ 10 each)

Interest payable on debt = 60,00,000 × $\frac{18}{100}$ = ₹ 10,80,000

The difference point between the two alternatives is calculated by:

 $\frac{(\mathsf{EBIT} - \mathsf{I1})(\mathsf{1} - \mathsf{T})}{\mathsf{E1}} = \frac{(\mathsf{EBIT} - \mathsf{I2})(\mathsf{1} - \mathsf{T})}{\mathsf{E2}}$ $\frac{(\mathsf{EBIT} - 0)(\mathsf{1} - 0.30)}{9,00,000} = \frac{(\mathsf{EBIT} - 10,80,000)(\mathsf{1} - 0.30)}{3,00,000}$ $\frac{(\mathsf{EBIT})(0.70)}{9,00,000} = \frac{(\mathsf{EBIT} - 10,80,000)(0.70)}{3,00,000}$ $\frac{\mathsf{EBIT}(0.70)}{3} = \frac{0.70(\mathsf{EBIT} - 10,80,000)}{1}$ $\mathsf{EBIT} = 3\mathsf{EBIT} - 32,40,000$ $\mathsf{EBIT} = -32,40,000$ $\mathsf{EBIT} = \frac{32,40,000}{2}$

EBIT = ₹ 16,20,000

Financial BEP

Therefore, at EBIT of ₹ 16,20,000, earnings per share for the two alternatives is equal.

Q.22

MTP Dec 21 (2)

Sophisticated Limited is considering three financing plans. The key information is as follows:

(a) Total investment amount to be raised ₹ 4,00,000

(b) Plans of Financing Proportion:

- (e) Equity shares of the face value of \gtrless 10 each will be issued at a premium of \gtrless 10 per share.
- (f) Expected EBIT is ₹ 10,00,000.

You are required to DETERMINE for each plan: -

- (i) Earnings per share (EPS)
- (ii) The financial break-even point.

| EPS ₹ [(A) ÷ (B)] | 35 | 68.6 | 68 |

(ii) Calculation of Financial Break-even point

Financial break-even point is the earnings which are equal to the fixed finance charges and preference dividend.

Plan A: Under this, plan there is no interest or preference dividend payment. Hence, the Financial Breakeven point will be zero.

Plan B: Under this plan, there is an interest payment of ₹ 20,000 and no preference dividend. Hence, the Financial Break-even point will be ₹ 20,000 (Interest charges).

Plan C: Under this plan, there is no interest payment but an after tax preference dividend of ₹ 20,000 is paid. Hence, the Financial Break- even point will be before tax earnings of ₹ 28,571 (i.e. ₹ 20,000 ÷ 0.7)

(iii) Computation of indifference point between the plans.

The indifference between two alternative methods of financing is calculated by applying the following formula.

 $\frac{\left(\mathsf{EBIT} - \mathsf{I1}\right)\left(\mathsf{1} - \mathsf{T}\right)}{\mathsf{E1}} = \frac{\left(\mathsf{EBIT} - \mathsf{I2}\right)\left(\mathsf{1} - \mathsf{T}\right)}{\mathsf{E2}}$ Where. EBIT Earnings before interest and tax. = Fixed charges (interest or pref. dividend) under Alternative 1 11 = 12 Fixed charges (interest or pref. dividend) under Alternative 2 = Т Tax rate = E1 No. of equity shares in Alternative 1 = E2 No. of equity shares in Alternative 2 = Now, we can calculate indifference point between different plans of financing.

(a) Indifference point where EBIT of Plan A and Plan B is equal.

 $\frac{(\text{EBIT} - 0)(1 - 0.3)}{20000} = \frac{(\text{EBIT} - 20,000)(1 - 0.3)}{10,000}$ 0.7 EBIT (10,000) = (0.7 EBIT - 14,000) (20,000) 7,000 EBIT = 14,000 EBIT - 28 crores EBIT = 40,000

Q.23 Indifference Point

Chapter - 03

MTP May 21(1)

HN Limited is considering total investment of Rs. 20 lakhs. You are required to CALCULATE the level of earnings before interest and tax (EBIT) at which the EPS indifference point between the following financing alternatives will occur:

- Equity share capital of Rs. 12,00,000 and 14% debentures of Rs. 8,00,000. (i) Or
- Equity share capital of Rs. 8,00,000, 16% preference share capital of Rs. 4,00,000 and 14% debentures of (ii) Rs. 8,00,000.

Assume the corporate tax rate is 30% and par value of equity share is Rs.10 in each case.

Computation of level of earnings before interest and tax (EBIT) Ans.

In case alternative (i) is accepted, then the EPS of the firm would be:

$$EPS \text{ Alternative (i)} = \frac{(EBIT - Interest)(1 - tax rate)}{No.of equity shares} = \frac{(EBIT - 0.14 \times 8, 00, 000)(1 - 0.3)}{1,20,000 \text{ shares}}$$

In case the alternative (ii) is accepted, then the EPS of the firm would be

$$EPS_{Alternative (ii)} = \frac{(EBIT - Interest) (1 - tax rate) - F}{No.of equity shares}$$

$$= \frac{(\mathsf{EBIT} - 0.14 \times 8, 00, 000) (1 - 0.3) - 0.16 \times 4, 00,000}{80.000 \mathsf{shares}}$$

http://tiny.cc/FASTCostFMbyAB

In order to determine the indifference level of EBIT, the EPS under the two alternative plans should be equated as follows:

$$\frac{(\mathsf{EBIT} - 0.14 \times 8, 00, 000) (1 - 0.3)}{1,20,000 \mathsf{shares}} = \frac{(\mathsf{EBIT} - 0.14 \times 8, 00, 000) (1 - 0.3) - 0.16 \times 4, 00,000}{80,000 \mathsf{shares}}$$

Or,
$$\frac{0.7\mathsf{EBIT} - 78, 400}{1,20,000} = \frac{0.7\mathsf{EBIT} - 1, 42, 400}{80,000}$$

Or
$$1.40 \mathsf{EBIT} - \mathsf{Rs}. 1,56,800 = 2.10 \mathsf{EBIT} - \mathsf{Rs}. 4,27,200$$

Or
$$0.70 \mathsf{EBIT} = \mathsf{Rs}. 2,70,400$$

There is no indifference point between proposal 'Q' and proposal 'R'

Analysis: It can be seen that financial proposal 'Q' dominates proposal 'R', since the financial break-even-

point of the former is only Rs. 2,00,000 but in case of latter, it is Rs. 4,00,000.

Sundaram Ltd. discounts its cash flows at 16% and is in the tax bracket of 35%. For the acquisition of a machinery worth ₹10,00,000, it has two options - either to acquire the asset by taking a bank loan @ 15% p.a. repayable in 5 yearly instalments of ₹ 2,00,000 each plus interest or to lease the asset at yearly rentals of ₹ 3,34,000 for five (5) years. In both the cases, the instalment is payable at the end of the year. Depreciation is to be applied at the rate of 15% using 'written down value' (WDV) method. You are required to STATE with reason which of the financing options is to be exercised.

By making analysis of both the alternatives, it is observed that the present value of the cash outflow is lower in alternative II by ₹ 20,755 (i.e. ₹ 731,540 - ₹ 7,10,785) Hence, it is suggested to acquire the asset on lease basis.

Q.27 EPS / BEP

XYZ Ltd. is considering three financial plans for which the key information is as below:

- (i) Total investment to be raised ₹4,00,000.
- (ii) Plans of Financing Proportion

| Plans | Equity | Debt | Preference shares | |
|-------|--------|------|-------------------|--|
| А | 100% | - | - | |
| В | 50% | 50% | - | |
| С | 50% | - | 50% | |

- (iii) Cost of debt 8%Cost of preference shares 8%
- (iv) Tax Rate is 50%
- (v) Equity shares of the face value of ₹10 each will be issued at a premium of ₹10 per share.
- (vi) Expected EBIT is ₹1,60,000

DETERMINE for each plan:

- (i) Earnings per share (EPS)
- (ii) Financial break-even point.
- (iii) COMPUTE the EBIT range among the plans A and C for point of indifference .

Ans. (i) Computation of Earnings per Share (EPS) for each Plan

| Particulars | Plan A | Plan B | Plan C |
|--|----------|----------|----------|
| | ₹ | ₹ | ₹ |
| Earnings Before Interest Tax (EBIT) | 1,60,000 | 1,60,000 | 1,60,000 |
| Less: Interest on debt at 8% | | (16,000) | |
| Earnings Before Tax | 1,60,000 | 1,44,000 | 1,60,000 |
| <i>Less</i> : Tax at 50% | 80,000 | 72,000 | 80,000 |
| Earnings After Tax | 80,000 | 72,000 | 80,000 |
| Less: Preference Dividend at 8% | | | 16,000 |
| Earnings available for equity shareholders | 80,000 | 72,000 | 64,000 |
| Number of Equity Shares | 20,000 | 10,000 | 10,000 |
| Earnings per share (EPs) | ₹4.00 | ₹7.20 | ₹6.40 |

(ii) Financial Break-even Point for Each Plan

Plan A : There is no fixed financial charges, hence the financial break -even point for Plan A is zero.
 Plan B : Fixed interest charges is ₹16,000, hence the financial break-even point for Plan B is ₹16,000
 Plan C : Fixed charge for preference dividend is ₹16,000, hence, the financial break-even point for Plan C is ₹16,000

170 Chapter - 03

By CA Amit Sharma

(iii) Indifference point between Plan A and C

$$\frac{(X - 0)(1 - 0.5) - 0}{20,000} = \frac{(X - 0)(1 - 0.5) - 16,000}{10,000 \text{shares}}$$
0.5X
Or $\frac{0.5X}{20,000} = \frac{0.5X - 16,000}{10,000}$ or, 0.5X - X= -32,000 or, 0.5X = 32,000
or, X = ₹ 64,000

Thus point of indifference between plan A and C is ₹64,000.

You are required to:

- (1) Calculate the value of equity of both the companies on the basis of M.M. Approach without tax.
- (2) Calculate the Total Value of both the companies on the basis of M.M. Approach without tax.

Ans. (1) Computation of value of equity on the basis of MM approach without tax

| Value of Firm (V) = $S + D$ | 70.222 | 66.667 |

Q.2

Implied equity rate of

A Limited and B Limited are identical except for capital structures. A Ltd. has 60 per cent debt and 40 per cent equity, whereas B Ltd. has 20 per cent debt and 80 per cent equity. (All percentages are in market-value terms.) The borrowing rate for both companies is 8 per cent in a no-tax world, and capital markets are assumed to be perfect.

- (a) (i) If X, owns 3 per cent of the equity shares of A Ltd., determine his return i f the Company has net operating income of ₹ 4,50,000 and the overall capitalization rate of the company, (Ko) is 18 percent.
 - (ii) Calculate the implied required rate of return on equity of A Ltd.

- (b) B Ltd. has the same net operating income as A Ltd.
 - (i) Calculate the implied required equity return of B Ltd.
 - (ii) Analyse why does it differ from that of A Ltd.

🛛 By CA Amit Sharma 🔎

Ans.

(a) Value of A Ltd. =
$$\frac{\text{NOI}}{\text{Ko}} = \frac{4,50,000}{18\%} = 25,00,000$$

(i) Return on Shares of X on A Ltd.

| Particulars | Amount (₹) |
|--|------------|
| Value of the company | 25,00,000 |
| Market value of debt (60% x ₹ 25,00,000) | 15,00,000 |
| Market value of shares (40% x ₹ 25,00,000) | 10,00,000 |
| Particulars | Amount (₹) |
| Net operating income | 4,50,000 |
| Interest on debt (8% × ₹ 15,00,000) | 1,20,000 |
| Earnings available to shareholders | 3,30,000 |
| Return on 3% shares (3% × ₹ 3,30,000) | 9,900 |

(ii) Implied required rate of return on equity of A Ltd. =

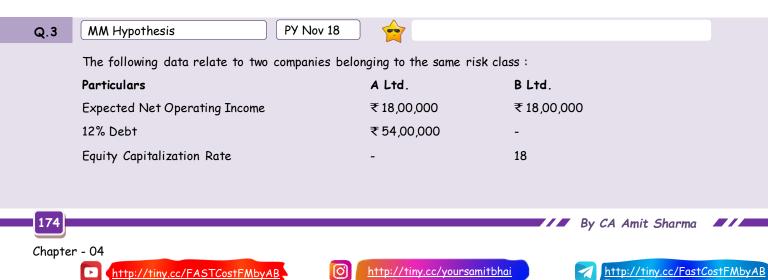

$$\frac{3,30,000}{10,00,000} = 339$$

(b) (i) Calculation of Implied rate of return of B Ltd.

| Particulars | Amount (₹) |
|--|------------|
| Total value of company | 25,00,000 |
| Market value of debt (20% × ₹ 25,00,000) | 5,00,000 |
| Market value of equity (80% × ₹ 25,00,000) | 20,00,000 |
| Particulars | Amount (₹) |
| Net operating income | 4,50,000 |
| Interest on debt (8% × ₹ 5,00,000) | 40,000 |
| Earnings available to shareholders | 4,10,000 |

Implied required rate of return on equity = $\frac{4,10,000}{20,00,000}$ = 20.5%

(ii) Implied required rate of return on equity of B Ltd. is lower than that of A Ltd. because B Ltd. uses less debt in its capital structure. As the equity capitalisation is a linear function of the debt-toequity ratio when we use the net operating income approach, the decline in required equity return offsets exactly the disadvantage of not employing so much in the way of "cheaper" debt funds.

Q.4

MM Hypothesis

PY May 18 🦷 🧃

Stopgo Ltd, an all equity financed company, is considering the repurchase of ₹ 200 lakhs equity and to replace it with 15% debentures of the same amount. Current market Value of the company is ₹ 1140 lakhs and it's cost of capital is 20%. It's Earnings before Interest and Taxes (EBIT) are expected to remain constant in future. It's entire earnings are distributed as dividend. Applicable tax rate is 30 per cent.

You are required to calculate the impact on the following on account of the change in the capital structure as per Modigliani and Miller (MM) Hypothesis:

- (i) The market value of the company
- (ii) It's cost of capital, and
- (iii) It's cost of equity

Ans.

Working Note

Net income (NI) for equity = Market Value of Equity

holders Ke

Net income (NI) for equity holders 0.20 = ₹ 1,140 lakhs

Therefore, Net Income to equity-holders = ₹ 228 lakhs

EBIT = ₹ 228 lakhs / 0.7 = ₹ 325.70 lakhs

| | All Equity | Debt of Equity |
|------------------------------------|--------------|----------------|
| | (₹ In lakhs) | (₹ In lakhs) |
| EBIT | 325.70 | 325.70 |
| Interest on ₹200 lakhs @ 15% | | 30.00 |
| EBT | 325.70 | 295.70 |
| Tax @ 30 % | 97.70 | 88.70 |
| Income available to equity holders | 228 | 207 |

(i) Market value of levered firm

= Value of unlevered firm + Tax Advantage

= ₹ 1,140 lakhs + (₹200 lakhs × 0.3)

= ₹ 1,200 lakhs

The impact is that the market value of the company has increased by \gtrless 60 lakhs (\gtrless 1,200 lakhs - \gtrless 1,140 lakhs)

Calculation of Cost of Equity

Ke

= (Net Income to equity holders / Equity Value) X 100

= (207 lakhs / 1200 lakhs - 200 lakhs) X 100

= (207/1000) X 100

= 20.7 %

(ii) Cost of Capital

| Components | Amount (₹ In lakhs) | Cost of Capital % | Weight | WACC % |
|------------|---------------------|-------------------|--------|--------|
| Equity | 1000 | 20.7 | 83.33 | 17.25 |
| Debt | 200 | (15% X 0.7) =10.5 | 16.67 | 1.75 |
| | 1200 | | | 19.00 |

The impact is that the WACC has fallen by 1% (20% - 19%) due to the benefit of tax relief on debt interest payment.

(iii) Cost of Equity is 20.7% [As calculated in point (i)]

The impact is that cost of equity has risen by 0.7% i.e. 20.7% - 20% due to the presence of financial risk. Further, Cost of Capital and Cost of equity can also be calculated with the help of formulas as below, though there will be no change in final answers.

🖝 By CA Amit Sharma 🔎

Cost of Capital (Ko) = Keu(1-tL) Where, Keu = Cost of equity in an unlevered company t = Tax rate $L = \frac{\text{Debt}}{\text{Debt} + \text{Equity}}$ Ko = $0.2 \times \left(1 - \frac{200 \text{lakh}}{1,200 \text{lakh}} \times 0.3 \right)$ So, Cost of capital = 0.19 or 19% Cost of Equity (Ke) = Keu + (Keu - Kd) $\frac{\text{Debt } (1 - \dagger)}{\text{Equity}}$ Where, Keu = Cost of equity in an unlevered company Kd = Cost of debt t = Tax rate Ke = 0.20 + $\left(0.20 - 0.15 \times \frac{200 \text{ lakh} \times 0.7}{1,000 \text{ lakh}} \right)$ Ke = 0.20 + 0.007 = 0.207 or 20.7% So, Cost of Equity = 20.70%

Blue Ltd., an all equity financed company is considering the repurchase of ₹ 275 lakhs equity shares and to replace it with 15% debentures of the same amount. Current market value of the company is ₹ 1,750 lakhs with its cost of capital of 20%. The company's Earnings before Interest and Taxes (EBIT) are expected to remain constant in futu re years. The company also has a policy of distributing its entire earnings as dividend.

Assuming the corporate tax rate as 30%, you are required to CALCULATE the impact on the following on account of the change in the capital structure as per Modigliani and Miller (MM) Approach:

- (i) Market value of the company
- (ii) Overall Cost of capital
- (iii) Cost of equity

Ans. Workings:

Income Statement

| | All Equity | Equity & Debt |
|------------------------------------|--------------|---------------|
| | (₹ In lakhs) | (₹ In lakhs) |
| EBIT (as calculated above) | 500 | 500 |
| Interest on ₹ 275 lakhs @ 15% | | 41.25 |
| EBT | - | 458.75 |
| Tax @ 30% | 500 | <u>137.63</u> |
| Income available to equity holders | 150 | 321.12 |
| | 350 | |

(i) Market value of the company

| Market value of levered firm | = Value of unlevered firm + Tax Advantage |
|-------------------------------------|---|
| | = ₹ 1,750 lakhs + (₹ 275 lakhs × 0.3) |
| | =₹1,832.5 lakhs |
| Change in market value of the compa | ny = ₹ 1,832.5 lakhs - ₹ 1,750 lakhs |
| | = ₹ 82.50 lakhs |

The impact is that the market value of the company has increased by \gtrless 82.50 lakks due to replacement of equity with debt.

(ii) Overall Cost of Capital

| Market Value of Equity | = Market value of levered firm - Equity repurchased |
|------------------------|--|
| | = ₹ 1,832.50 lakhs - ₹ 275 lakhs = ₹ 1,557.50 lakhs |
| Cost of Equity (Ke) | = (Net Income to equity holders / Market value of equity) × 100 |
| | = (₹ 321.12 lakhs / ₹ 1,557.50 lakhs) x 100 |
| | = 20.62% |
| Cost of debt (Kd) | = I (1 - †) = 15 (1 - 0.3) = 10.50% |

| Components | Amount | Cost of Capital Weight | | WACC (K ₀) |
|------------|--------------|------------------------|------|------------------------|
| | (₹ In lakhs) | % | | % |
| Equity | 1,557.50 | 20.62 | 0.85 | 17.53 |
| Debt | 275.00 | 10.50 | 0.15 | 1.58 |
| | 1,832.50 | | 1 | 19.11 |

The impact is that the Overall Cost of Capital or Ko has fallen by 0.89% (20% - 19.11%) due to the benefit of tax relief on debt interest payment.

(iii) Cost of Equity

The impact is that cost of equity has risen by 0.62% (20.62% - 20%) due to the presence of financial risk i.e. introduction of debt in capital structure.

Note: Cost of Capital and Cost of equity can also be calculated with the help of following formulas, though there will be no change in the final answers.

Cost of Capital (Ko) = Keu [1 - († x L)] Where,

Keu = Cost of equity in an unlevered company

👅 By CA Amit Sharma 🔎

http://tiny.cc/FastCostFMbyAB

181

$$t = Tax rate$$

$$L = \frac{Debt}{0.2Debt + Equity0}$$
So, Ko = 0.20 + $\left[1 - \left(0.3x \frac{275 \text{ lakhs}}{1,832.5\text{ lacks}}\right)\right] = 0.191 \text{ or } 19.10\% \text{ (approx.)}$
Cost of Equity (Ke) = Keu + (Keu - Kd) $\frac{Debt(1 - t)}{Equity}$
Where,
Keu = Cost of equity in an unlevered company
Kd = Cost of debt
$$t = Tax rate$$
So, Ke = 0.20 + $(0.20 - 0.15)x \frac{275 \text{ lakhs}(1-0.3)}{1,557.5 \text{ lakhs}} = 0.2062 \text{ or } 20.62\%$

Zordon Ltd. has net operating income of ₹ 5,00,000 and total capitalization of ₹ 50,00,000 during the current year. The company is contemplating to introduce debt financing in capital structure and has various options for the same. The following information is available at different levels of debt value:

| Debt value (₹) | Interest rate (%) | Equity capitalization rate (%) |
|-------------------|----------------------|-----------------------------------|
| 0 | - | 10.00 |
| 5,00,000 | 6.0 | 10.50 |

| 25,00,000 | 7.5 | 13.50 |
| 30,00,000 | 8.0 | 16.00 |

Assuming no tax and that the firm always maintains books at book values, you are REQUIRED to calculate:

- (i) Amount of debt to be employed by firm as per traditional approach.
- (ii) Equity capitalization rate, if MM approach is followed.

(a) Amount of debt to be employed by firm as per traditional approach

Calculation of Equity, Wd and We

Rounak Ltd. is an all equity financed company with a market value of ₹ 25,00,000 and cost of equity (Ke) 21%. The company wants to buyback equity shares worth ₹ 5,00,000 by issuing and raising 15% perpetual debt of the same amount. Rate of tax may be taken as 30%. After the capital restructuring and applying MM Model (with taxes), you are required to COMPUTE:

You are required to COMPUTE the equity capitalization rate if MM approach is followed. Assume that the firm operates in zero tax regime and calculations to be based on book values.

- (c) BRIEF OUT the remedies for Over-Capitalisation.

| | Value of unlevered company Kee Ltd. $= \frac{EAT}{Equity capitalization rate}$ $= \frac{Rs.3,50,000}{25\%} = Rs.14,00,000$ Lee Ltd. (Equity and Debt) i.e levered company: Value of levered company = Value of Equity + Value of Debt = Rs. 14,00,000 + (Rs. 20,00,000 × 0.3) = Rs. 20,00,000 |
|------|---|
| Q.13 | MM Hypothesis MTP May 20 A&R Ltd. is an all equity financed company with a market value of Rs.25,000 lakh and cost of equity (Ke) 18%. |
| | The company wants to buyback equity shares worth Rs.5,000 lakh by issuing and raising 10% debentures redeemable at 10% premium after 5 years. Rate of tax may be taken as 35%. Applying Modigliani-Miller (MM) (with taxes), you are required to CALCULATE after restructuring: (i) Market value of A&R Ltd. (ii) Cost of Equity (Ke) (iii) Weighted average cost of capital (using market weights). |
| Ans. | Value of a company (V) = Value of equity (S) + Value of debt (D) |
| | A&R Ltd. is all equity financed company, its value would equal to value of equity. Market value of equity = $\frac{\text{Net Income (NI)}}{\text{Ke}}$ In the question, market value of equity is Rs.25,000 lakh and cost of equity (Ke) is 18%. The Net Income (NI) is calculated as follows: |
| | $\frac{\text{Net income (NI) for equity - holders}}{\text{Ke}} = \text{Market Value of Equity}$ |
| | Net income (NI) for equity – holders 0.18 = 25,000 lakh |
| | Net income for equity holders = 4,500 lakh Net Income (NI) is after tax income, the before tax income would be EBT= $\frac{4,500 \text{ lakh}}{(1-0.35)}$ = 6,923.07 lakh. |
| | Since, A&R Ltd. is an all equity financed and there is no interest expense, so here EBT is equal to EBIT. After issuing 10% debentures, the A&R Ltd would become a levered company. |
| | (i) The value of A&R Ltd. after issuing debentures would be calculated as follows: Value of a levered company (Vg) = Value of an unlevered company (Vu) + Tax benefit (TB) = Rs.25,000 lakh + (Rs.5,000 lakh × 35%) = Rs.25,000 + Rs.1,750 = Rs.26,750 |

🖊 🖉 By CA Amit Sharma 🖉

(ii) Cost of Equity (Ke)

| Total Value | = Rs.26,750 lakh |
|---|------------------|
| Less: Value of Debt | = Rs. 5,000 lakh |
| Value of Equity | = Rs. 21,750 |
| Ke = $\frac{4,175 \text{ lakh}}{21,750 \text{ lakh}}$ =0.19 | 919 = 19.19% |

(iii) WACC (on market value weight)

| Components of Costs | Amount (lakh) | Cost of Capital (%) | Weight | WACC (%) |
|---------------------|---------------|---------------------|--------|----------|
| Equity | 21,750 | 19.19 | 0.81 | 15.54 |
| Debt | 5,000 | 8.10 | 0.19 | 1.54 |
| | 26,750 | | | 17.08 |

Workings Note:

1.

| | | (Rs. in lakh) |
|--|------------|--------------------|
| | All Equity | Debt and Equity |
| EBIT (as calculated above) | 6,923.07 | 6,923.07 |
| Interest to debt-holders | - | 500.00 |
| EBT | 6,923.07 | 6,423.07 |
| Taxes (35%) | 2,423.07 | 2,248.07 |
| Income available to equity shareholders | 4,500.00 | 4,175.00 |
| Income to debt holders plus income available to shareholders | 4,500.00 | 4,675.00 |

2. Cost of Debenture (Kd) =
$$\frac{\text{Rs.500}(1 - 0.35) + \frac{(5, 500 - 5, 000)}{5}}{\frac{(5, 500 + 5, 000)}{2}}$$
$$= \frac{\text{Rs.325 + 100}}{5, 250} = 0.081 \text{ or } 8.1\%$$

Q.14

MM Hypothesis

MTP Nov 19 📄 😁

A Ltd. and B Ltd. are identical in every respect except capital structure. A Ltd. does not employ debts in its capital structure whereas B Ltd. employs 12% Debentures amounting to Rs.100 lakhs. Assuming that :

- (i) All assumptions of M-M model are met;
- (ii) Income-tax rate is 30%;
- (iii) EBIT is Rs. 25,00,000 and
- (iv) The Equity capitalization rate of 'A' Ltd. is 20%.

CALCULATE the value of & also find out the Weighted Average Cost of Capital for both the companies.

| Ans. | (i) | (i) Calculation of Value of 'A Ltd.' and 'B Ltd' according to MM Hypothesis | | | | | | | |
|------|---|---|---------------|--|--|--|--|--|--|
| | | Market Value of 'A Ltd' (Unlevered) | | | | | | | |
| | | Vu = $\frac{\text{EBIT}(1-t)}{\text{Ke}} = \frac{\text{Rs.}25,00,000(1-0.30)}{20\%} = \frac{\text{Rs.}17,50,000}{20\%} = \text{Rs.}8^{\circ}$ | 7,50,000 | | | | | | |
| | Market Value of 'B Ltd.' (Levered) | | | | | | | | |
| | | Vg = Vu + TB | | | | | | | |
| | = Rs. 87,50,000 + (Rs.1,00,00,000 × 0.30) | | | | | | | | |
| | | = Rs. 87,50,000 + Rs.30,00,000 = Rs.1,17,50,000 | | | | | | | |
| | (ii) | WACC of 'A Ltd.' = 20% (i.e. Ke = Ko) WACC of 'B Ltd.' | | | | | | | |
| | | | B Ltd. (Rs.) | | | | | | |
| | | EBIT | 25,00,000 | | | | | | |
| | | Interest to Debt holders | (12,00,000) | | | | | | |
| | | ЕВТ | 13,00,000 | | | | | | |
| | | Taxes @ 30% | (3,90,000) | | | | | | |
| | | Income available to Equity Shareholders | 9,10,000 | | | | | | |
| | | Total Value of Firm | 1,17,50,000 | | | | | | |
| | | Less: Market Value of Debt | (1,00,00,000) | | | | | | |
| | | Market Value of Equity | 17,50,000 | | | | | | |
| | | Return on equity (Ke) = 9,10,000 / 17,50,000 | 0.52 | | | | | | |

Computation of WACC B. Ltd

| Component of Capital | Amount | Weight | Cost of Capital | WACC |
|----------------------|-------------|--------|-----------------|--------|
| Equity | 17,50,000 | 0.149 | 0.52 | 0.0775 |
| Debt | 1,00,00,000 | 0.851 | 0.084* | 0.0715 |
| Total | 1,17,50,000 | | | 0.1490 |

*Kd= 12% (1- 0.3) = 12% × 0.7 = 8.4% WACC = 14.90%

Q.15

Traditional Theory

MTP May 19(2)

The proportion and required return of debt and equity was recorded for a company with its increased financial leverage as below:

| Debt (%) | Required return (Kd) (%) | Equity (%) | Required Return (Ke) (%) | Weighted Average Cost of Capital (WACC) (Ko)(%) |
|----------|-----------------------------|---------------|-----------------------------|--|
| 0 | 5 | 100 | 15 | 15 |
| 20 | 6 | 80 | 16 | ? |
| 40 | 7 | 60 | 18 | ? |
| 60 | 10 | 40 | 23 | ? |

🖊 By CA Amit Sharma 📕

| 80 | 15 | 20 | 35 | ? |
|----|----|----|----|---|
| | | | | |

You are required to complete the table and IDENTIFY which capital structure is most beneficial for this company. (Based on traditional theory, i.e., capital structure is relevant).

Ans.

Computation of Weighted Average Cost of Capital (WACC) for each level of Debt-equity mix.

| Debt (%) | Required return (Kd)(%) | • • | Required return (Ke) (%) | Kd× Proportion of debt + Ke Proportion and equity | Weighted Average Cost of Capital (WACC)(Ko)(%) |
|-------------|----------------------------|-----|-----------------------------|---|--|
| 0 | 5 | 100 | 15 | 0%(5%)+100%(15%) | 15 |
| 2 | 6 | 80 | 16 | 20%(6%)+80%(16%) | 14 |
| 4 | 7 | 60 | 18 | 40%(7%)+60%(18%) | 13.6 |
| 6 | 10 | 40 | 23 | 60%(10%)+40%(23%) | 15.2 |
| 8 | 15 | 20 | 35 | 80%(15%)+20%(35%) | 19 |

The optimum mix is 40% debt and 60% equity, as this will lead to lowest WACC value i.e., 1 3.6%.
