Bedroom

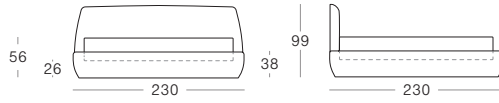

Undulating topography, water cascading into a lush tree fern gully.

The Erskine indoor collection consists of a series of generous sofas, beds and refined coffee & side tables. The gentle sweep of the Erskine's shape references natural curvilinear forms, whilst a French seam rises up and continues along a ridge.

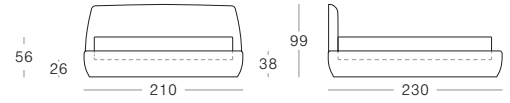

Bed

Bed Head

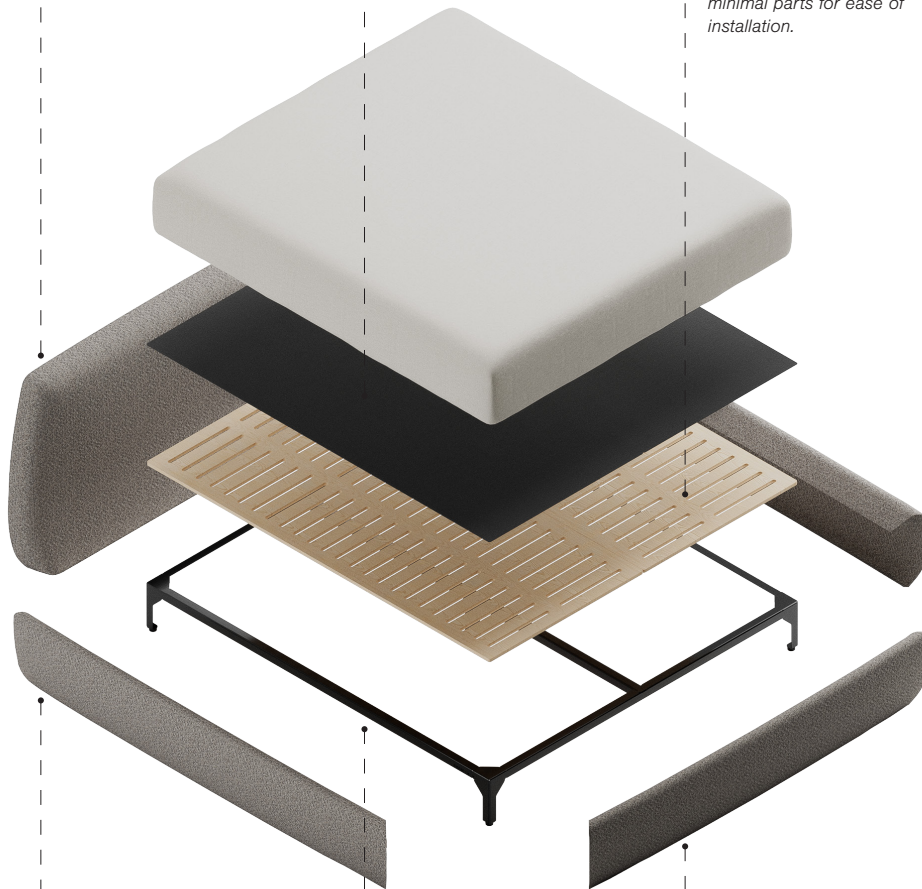

The Erskine Bed's bed head is designed with a gentle form to provide superior comfort. The foam core is upholstered with a feather top, creating a soft area around the user's head and upper body.

Covering Fabric

The black fabric used on the Erskine Bed's ventilation panels not only creates a clean finish, but also provides a soft touchpoint for the user.

Ventilation Panels

The Erskine Bed features two CNC-milled plywood panels that are designed for optimal ventilation. This promotes airflow, for enhanced sleep and assists in the longevity of the mattress. Compared with a traditional slat construction, the panels are also designed with minimal parts for ease of installation.

Minimal Components

The Erskine Bed's main upholstered components are split into four sections: head, left, right, and end. This minimal approach to assembly and disassembly simplifies the process for the installer.

Structural Frame

The foundation of the Erskine Bed is a strong, lightweight, and refined metal frame. The design has undergone numerous iterations through a research and development process, ensuring high durability and longevity.

Soft Touchpoints

The Erskine Bed's soft, upholstered outer touchpoints create a comfortable experience for the user. They also reduce instances of stubbed toes and shin bruising, providing a safer and more enjoyable bedroom experience.
