

Start by removing your existing trim plate by lifting up at the shifter side and pulling up and out.

Remove your existing power outlet, traction control switch and harness.

Install on the new console.

Remove the trim on the right side of the console by simply pulling out on it, there are no screws.

Locate the connector by the emergency brake level and unplug it.

Install our plug and play harness inline with this connector.

Run the small connector up to wear the 4 pack gauges sit.

Reinstall the side trim.

Plug the small connector into the backside of the 4 pack gauge cluster.

If there is already a wire set plugged into the gauges, please disconnect, our harness replaces it.

Install the 4 pack console by guiding in the front first and snapping the rest down into place.

Start vehicle and confirm operation
