

Our 4 pack harness is made to plug directly into the 4 pack gauge.

Removal. Simply pull up on your current trim plate and unplug the front console harness from the trim plate connector.

If your new 4 pack kit didn't come with the traction control switch and power outlet, you will need to remove those from your original trim and swap them onto the new trim.

Remove passenger side dash board trim.

Remove inner sill plate by gently pulling out and up..

Remove side panel trim by releasing both the upper and lower trim clip.

Locate the 30 pin connector and disconnect it and plug our harness inline with this connector. Route the small connector over to the 4 pack gauge and plug directly into the back of the gauge.
