MICROFIBER TOWELS

Microfiber Terry Towels 16"x16" (40cm x 40cm) Excellent for general dusting and cleaning.

Microfiber Terry removes dirt, grease and grime from most any surfaces. Retains up to six times its weight in water. Best of all microfiber terry will wash and be reused hundreds of times. Available in three colors (pink, green and light blue) to prevent cross contamination.

The absolute best product for glass, mirror and window cleaning. Use them also for CD disks, and computer screens. Cleans without leaving behind streaks, lint or spots. Can be used without chemicals. This wiper can also be washed and reused hundreds of times.

Microfiber is a man-made product that consists of two fibers, Polyester and Polymide. The Polyester is the scrubbing and cleaning fiber, while the Polymide is the absorbing and quick drying fiber. Each square inch in a microfiber towel contains approximately 90,000 microfibers.

Microfiber is a lint free, non-abrasive, and hypoallergenic product that allows you to clean without the use of chemicals. Unlike ordinary cotton towels that move, or push, the dirt and dust from one point to another, Microfiber actually gets underneath the dirt and lifts it from the surface. It then stores the dirt particles in the towel, until it is washed. For this reason, chemicals are not needed. Microfiber is very absorbent and can hold up to six times its weight in moisture. Microfiber dust cloths are safe on all surfaces. Microfiber can be used with a diluted disinfectant.
