Description:

Cliradex Light is a natural, preservative-free lid, lash and facial foaming cleanser formulated with 4-Terpineol (T4O). Ocular irritation, inflammation and lid margin disease are associated with poor eyelid hygiene. Unlike traditional cleansers derived from man-made chemicals, Cliradex Light is a natural way to keep the eyelids and skin clean, comfortable and healthy. Cliradex Light is ideal for preventative care, everyday ocular hygiene and mild to moderate ocular irritation.

Relief from Irritation:

- Swollen or red eyelids
- Mild ocular pain or irritation
- Occasional eye crust
- Dry or itchy eyes

Instructions for Use:

- 1. Shake well before use.**
Start with clean hands and face.

- 2. Dispense a dime-sized amount of Cliradex Light onto fingertips.**

- 3. Use hands to rub foam into a light lather.**

- 4. Close eyes firmly and apply to affected area and surrounding facial area.**

- 5. Rub gently into skin until fully absorbed.**

What to Expect:

- For first time use, test a patch of skin on the arm and wait 15 minutes. If no allergic or abnormal skin reaction occurs, proceed to apply as instructed above.
- When suffering from severe ocular irritation, your skin may be sensitive and you may experience a transient stinging sensation. Such sensation is normal and should diminish with each use.
- Avoid direct contact with your eyes. If Cliradex gets in the eye, rinse with water or saline.
- If the user develops symptoms such as persistent or recurrent itching, swelling, or excessive skin dryness, this may be an allergic reaction/hypersensitivity to T4O (especially in the presence of a known sensitivity to fragrances or essential oils). The user should discontinue use of the product and consult their physician if any of these symptoms develop or worsen.
- No cleanup necessary. Cliradex Light will air dry in less than 30 seconds.

Recommended Usage:

- Use Cliradex Light twice a day
- Cliradex Light can be applied to the eyelids and surrounding skin
