

PETRIFIED WOOD

Reclaimed and perfectly preserved fossilized wood is given new life, hand carved and polished into striking accents and styles. Due to the natural fossilization process, which preserves and exhibits the unique details of the original bark and wood, a variance in color and texture is to be expected and speaks to the one-of-a-kind nature of these pieces.

Care for Your Petrified Wood

Preserve petrified wood styles with these care essentials:

- > Address spills immediately with a dry, soft cloth. Natural stone is a porous material, and although it has been sealed, spills should be blotted promptly to minimize staining.
- > Dust regularly with a soft, damp cloth, followed by a dry one.
- > Do not use window cleaning fluids, scouring compounds, gritty cloths, or strong solvents such as alcohol, ammonia or acetone as they may damage the finish.
- > Use coasters, trivets and placemats for protection against hot or wet items.
