

Elite CE-Komacel PVC Hygienic Wall Panels

A rigid hygienic wall system for projects that require a quick solution

Elite CE-K PVC - the finest PVC Sheet using the unique celuka extrusion process. Elite CE-K PVC owes its unique product properties to the combination of a solid topcoat and a cellular core, both made of the same material and manufactured in one single operation

The panels are self-supporting and so need less adhesive than the traditional thinner rigid sheets and have a full suite of ancillaries for a complete hygienic installation. Well suited to installations where down-time must be kept to a minimum, CE-K can be installed in half the time of traditional hygienic wall linings. Whilst still offering easy to clean, low maintenance, fire rated wall finishes. These panels are an ideal material for a hugely diverse range of applications such as, healthcare, food and beverage processing plants, sports facilities, commercial kitchens, retail, laboratories, education and modular builds.

6, 8 & 10mm thick

Characteristics:

- Fine-cell foam structure
- Solid, smooth outer skin
- Easy to work
- Good thermal insulation
- Good sound insulation
- Good flexural strength
- Resistant to chemicals and corrosion
- Low thermal conductivity
- UV Stabilised
- Low water absorption

Sheet Sizes	6mm thickness - 1220mm x 2440mm, 3050mm, 3660mm 8 & 10mm thickness - 1250mm x 2440mm, 3000mm (other thicknesses 4mm - 30mm available to order)
Colour	White
Finish	Satin
Fire Safety	EN 13501-BS3D0 BS476 Part 7 Class '1' Euro B1 *Class 'O' when fitted to a non-combustible substrate.

A range of fixing profiles are available.
