

INSTALLATION GUIDE: BRICK, BLOCK & STONE

Breathaplasta can be applied directly to brick, block and stone and is compatible with all masonry applications. Breathaplasta is a quick and easy lime plaster. It's simple to use and sets within an hour.

breathAplasta

Important notes for use on brick, block and stone:

- Ensure the masonry is consolidated. Dub out the masonry if needed - fill holes and level off.
- Mist the surface of the masonry 10-15 mins prior to plaster application to control suction.
- Allow 1 hour to dry per 2mm of plaster thickness.

Add 1 x 20kg bag of Breathaplasta to approx. 10 - 11 litres of clean water

Good for our buildings

Good for our health

Good for our environment

Mix the plaster using a paddle mix for at least 60 seconds

Mist the masonry surface with clean water to control suction

Apply at least 2 coats of plaster to all surfaces. Each coat should be up to 10mm thick

Setting time per coat of Breathaplasta is approx. 45 - 60 minutes

Run a clean trowel over the surface of the plaster for a smooth finish. Use a sponge float for more textured finishes

Equipment Required:

Breathaplasta, clean water and brush or water mister, hawk, trowel and plastering tools.

Surface preparation:

Consolidate wall to ensure no loose material. Surface should be uniformly flat. Mist the masonry surface with water to control suction.

Recommended plaster thickness:

Up to 50mm total thickness.

Recommended plaster application:

1. Base coat/scratch coat 4-10mm.
2. Additional coats up to 10mm thick to a max depth of 50mm. Allow approximately 1 hour to dry per 2mm thickness of plaster.
3. Top coat approx. 4mm. Moisten top coat using a fine mist spray bottle to help trowel to a smooth finish.

Coverage per 20kg bag:

Approx. 5 square metres at 4mm thickness

Setting time per coat:

Approx. 45 - 60 minutes
