

Fire protection for ventilation, smoke extract and kitchen extract ducts.

FIREPRO® DuctRock® Slab is manufactured with high density, non-combustible stone wool insulation and finished with a high emissivity black foil facing. Available in three thicknesses DuctRock® Slab is easy to handle, simple to install and capable of achieving fire resistance of up to El 120.

 ${\it FIREPRO}^{\circledcirc} \ Glue \ and \ a \ high \ performance \ Black \ Aluminium \ Foil \ Tape \ are \ also \ readily \ available \ from \ ROCKWOOL \ for \ sealing \ all \ board \ joints.$

- EI 120 mins on ventilation and smoke
- Tested on both vertical and horizontal ducts
- Wide ranging scope for many duct types
- High quality black foil finish
- Patented horizontal penetration detail

differentiate from our traditional

Fire Duct System.

APPLICATIONS

DuctRock® Slab has been designed for use with rectangular and square steel ductwork systems and has been fire tested in conjunction with the following duct types shown in table 1.

Table 1

Ventilation Duct: Type A			on Duct: be B	Smoke Extract Duct: Type C
Horizontal	Vertical	Horizontal	Vertical	
✓	✓	✓	✓	✓

PERFORMANCE

Fire performance

FIREPRO® DuctRock® Slab can achieve fire resistance ratings; Integrity (E) and Insulation (I) of EI 30 to EI 120 with only 3 thicknesses. Table 2 provides a summary of fire performance.

Table 2

FIREPRO® DuctRock® Slab		on Duct: e A	Ventilation Duct: Type B		Smoke Extract Duct: Type C	Ducts with a Combustible
(mm)	Horizontal	Vertical	Horizontal	Vertical		Lining
*60	EI 60	EI 60	EI 60	EI 60	EI 60	N/A
80	EI 90	EI 90	EI 90	EI 90	EI 90	N/A
90	EI 120	EI 120	EI 120	EI 120	EI 120	**EI 60

^{*}Use 60mm FIREPRO® DuctRock® Slab for EI 30 fire ratings

PRODUCT INFORMATION

Property	Description
Length	1200mm
Width	1000mm
Thickness	60, 80 & 90mm
Facing	Black aluminium foil
Fire resistance	Up to El 120*

^{*} Subject to the application

STANDARDS AND APPROVALS

Certificate
DuctRock® Slab has been tested in accordance with BS EN 1366: Part 1 for ventilation ducts and also BS EN 1366: Part 8 for smoke extraction ducts achieving up to El 120 minutes*.
DuctRock® Slab has been classified in accordance with EN 13501-3:2005 +A1: 2009.
Fire Resistance Classification: up to El 120 (ve, ho, i \leftrightarrow o) S
DuctRock® has been classified in accordance with EN 13501-4:2016.
Fire Resistance Classification: up to El 120 multi (ho/ve) S 500

^{*} Subject to the application

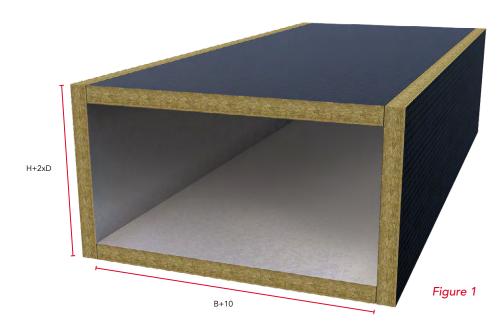

^{**}DuctRock slab has been tested in accordance with the criteria set out in section 11.2.2 of BS EN 1366-1:2014 (Ducts with combustible lining) where additional thermocouples were positioned within the duct to record the average and maximum temperature rise. Insulation failure was defined in accordance with EN 1363-1.

INSTALLATION

FIREPRO® Ductrock® Slab can be rapidly installed onto rectangular and square steel ductwork using a combination of Ø2.7 - Ø3.0mm stud welded pins, Ø30mm steel washers and ROCKWOOL FIREPRO® Glue. All board abutments and cross joints must be covered with ROCKWOOL black aluminium foil tape.

DuctRock Slab Thickness (mm)	Stud Welded Pin Length (mm)
60	62mm
80	82mm
90	92mm

FIREPRO® DuctRock® is easily cut with a hand saw or alternatively a circular/table saw. The top and bottom slabs should be cut 10mm wider than the width of the duct to ensure a tight cross joint with the side slabs. The side slabs should be cut to the height of the duct $(H) + 2 \times H$ insulation thickness as shown in Figure 1.

Top slab

When installed within horizontal applications the top boards do not require any stud welded pins and is simply positioned onto the duct with all board joints bonded with FIREPRO® Glue. Board joints must be covered using ROCKWOOL black foil tape.

Side wall slabs

The side wall slabs are installed using stud welded pins with 350mm maximum centres along the length of the duct and 400m centres across the depth as shown in Figure 2.

Side wall slabs must overlap the top and bottom boards as shown in Figures 3 & 4. All cross joints must be bonded with ROCKWOOL FIREPRO Glue.

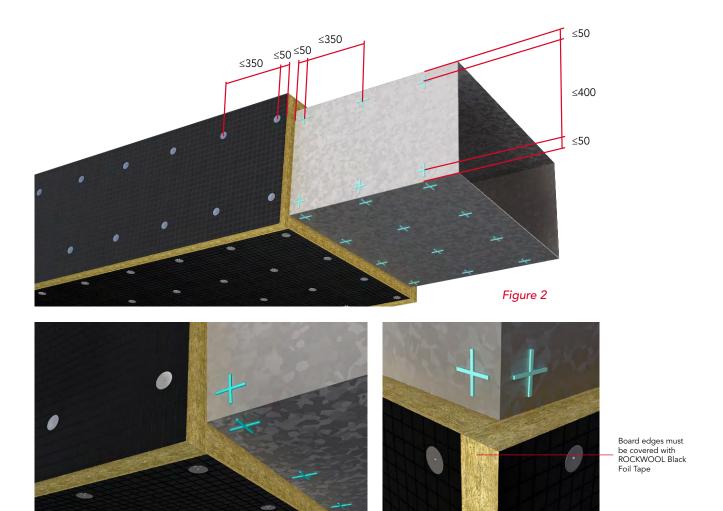

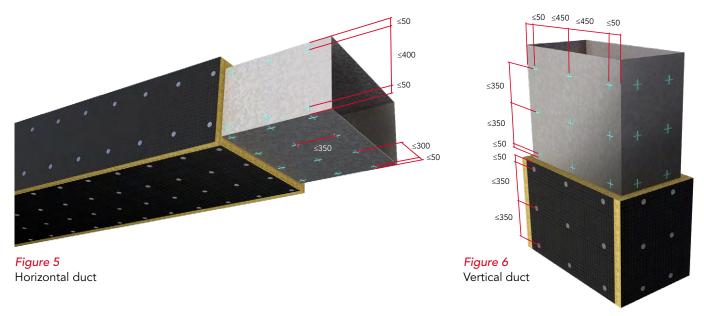

Figure 3
Cross joint horizontal duct

Figure 4
Cross joint vertical duct

Important: To ensure that there is a strong bond between the welded pin and the duct, always ensure that the welded pin is sufficiently isolated from for the foil surface of the insulation during welding.

Base slab

Install the base slabs with stud welded pins at a maximum of 350mm centres along the length of the duct and 300mm centres across the width of horizontal ducts and 450mm across the width of vertical ducts as shown as shown in Figures 5 and 6.

Detailing around flanges and drop rod hangers

Where the DuctRock® Slab bypasses a flange, drop rod hanger or both, cut a notch into the insulation as shown in Figure 7a-c. The insulation can easily be cut with a sharp knife or hand saw. All board joints must be bonded with FIREPRO Glue.

Glue the joints with FIREPRO® Glue Figure 7a

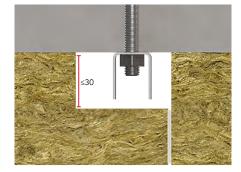

Figure 7c

Dry wall penetration

In order to maintain fire performance, provide stability and minimise noise transfer, ROCKWOOL have developed a patented solution for installing DuctRock® Slab at the point where the duct penetrates a dry wall system.

Figure 8
ROCKWOOL Patented Dry Wall Penetration Detail

Installation procedure: Dry wall Penetration

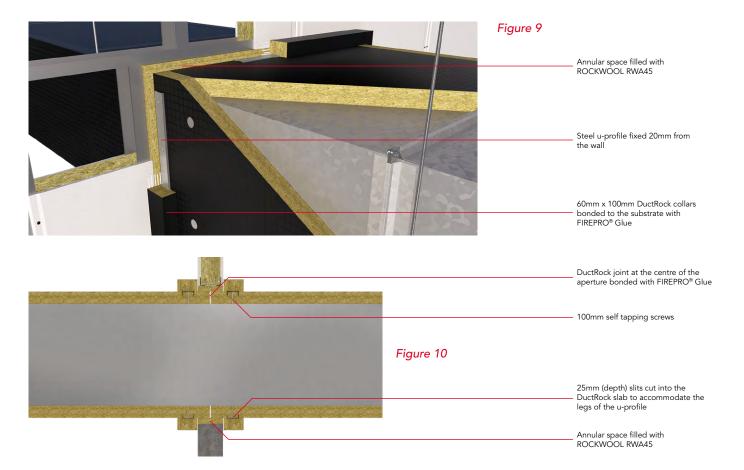

- 1. A joint in the DuctRock® Slab must be accommodated at the centre point of the aperture, as shown in Figure 10.
- 2. Fill the remaining annular space between the DuctRock® Slab and supporting structure of the dry wall system with ROCKWOOL RWA45 as shown in Figure 9.
- 3. To stiffen the duct around the penetration a 1.5mm thick steel u-profile (60 x 25 mm) must be fitted approx. 20mm from the wall, to both the vertical and horizontal sides of the duct (both sides of the aperture) the length of the profile can be determined using the following formula:

Duct Width/Height + (2 x Insulation Thickness) - 50mm

Examples shown in table below:

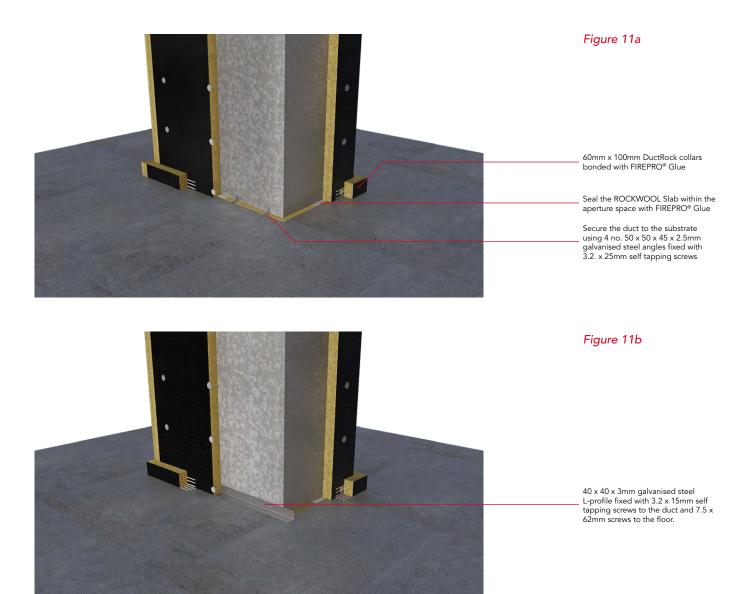

Duct size (mm)	Insulation thickness (mm)	U-Profile length (mm)		
		Horizontal	Vertical	
1500 (L) x 1000 (W) x 500 (H)	90	1130	630	
1500 (L) × 1000 (W) × 250 (H)	90	1130	380	

- 4. Before applying the u-profile to the DuctRock® Slab slits must be cut into the insulation to allow the profile sides to penetrate the insulation (Figure 10). The u-profile can be attached to the ductwork using 100mm self-tapping screws. 4No to the top and bottom slabs and 2No to the vertical slabs.
- 5. Once the u-profiles have been applied an insulated collar must be installed around the perimeter of the aperture. The collar can be simply cut from the DuctRock® Slab. Fix the collars in place with FIREPRO Glue as shown in Figure 9. Use nails to temporarily hold the collars in place whilst the glue cures.
- 6. ROCKWOOL Black foil tape can be used to cover any exposed edges of the collars.

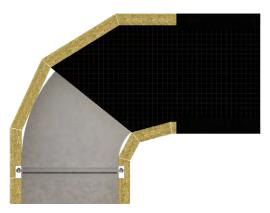

Installation procedure: Floor penetration

- 1. Maintain a 30mm gap between the ductwork and floor structure. Fill the gap between the duct and the floor structure with a ROCKWOOL Slab e.g. ROCKWOOL RWA45 as shown in Figure 11a. The flexible slab can be sealed within the void using FIREPRO® Glue.
- 2. Secure the duct to the floor structure using 4 no. 50 x 50 x 45 x 2.5mm galvanised steel angles to both sides of the aperture. The angles can be fixed using 2No 3.2 x 25mm self-tapping screws. Alternatively, the duct can be secured with a 40 x 40 x 3mm L profile as shown in Figure 11b. The length of the L profile should be equal to the width of the duct and installed to both sides (duct width).
- 3. Apply a DuctRock® collar to the perimeter of the aperture and on both sides as shown in Figure 11a. The collars can be fixed using FIREPRO Glue and temporarily held in place with nails until the glue cures.

Elbows

Elbows can be protected by cutting the DuctRock® Slab into fan shaped segments as shown in Figure 12a. Alternatively v-shaped slits can be cut into the back of the DuctRock Slab allowing it to wrap around the elbow as shown in Figure 12b. Fill the v-shaped channels with FIREPRO® Glue before applying to the duct and use nails to temporarily hold the insulation in place whilst the glue cures.

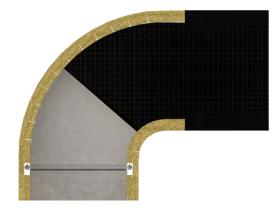

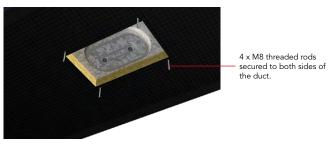

Figure 12a

Figure 12b

Access hatches

DuctRock® Slab can be cut and positioned within a steel frame to form a removable cover in the location of the steel access hatch. The insulated cover can be attached to the duct using 4N° M8 threaded rods (Figure 13a) ensuring the rods are secured on both sides of the duct. The cover is then fixed to the rods using steel M8 nuts and washers. The thickness of insulation should be appropriate to the fire resistance required.

Steel frame for housing the removable insulated cover.

Removable cover secured to the threaded rods with M8 nuts and washers.

Ancilliaries

FIREPRO Glue and ROCKWOOL Black Foil Tape is available from ROCKWOOL Stockists

Stud welded pins and self-tapping screws are available through CEVaC Limited, Tel: +44 (0) 1403 786503

SPECIFICATION CLAUSES

All ductwork is to be insulated with.....* mm ROCKWOOL FIREPRO® DuctRock® Slab, having a factory applied reinforced black aluminium foil to one face and tested in accordance with BS EN 1366: Part 1 and/or BS EN 1366:Part 8.

DuctRock® Slab is to be fixed to the duct using 2.7 - 3.0 mm diameter welded steel pins and 30 mm spring steel washers in accordance with the ROCKWOOL Product Data Sheet 'FIREPRO® DuctRock®'.

All joints are to be filled with FIREPRO® Glue and held tightly closed.

Installed to steel ductwork which complies with the following specification criteria:

Steel duct dimensions up to 1000x1250 (height x width) and 1500mm in length

With leakage class B in accordance with EN 1507. Further information on leakage classes can also be found in DW/144: Specification for Sheet Metal Ductwork low, medium and high pressure/velocity air systems.

With an under-pressure or over-pressure up to 500Pa

Steel flanges to be spot welded to the duct:

- Ventilation Duct 20mm flange
- Smoke Extract Duct 30mm flange

Flanges to be held together with either a 20mm flange joint profile (duct types A & B) or 30mm flange joint profile (duct type C). All flange joints to be sealed with sealing grease.

With stiffeners as follows:

- El 120 Ventilation Duct: 1 x Ø 15mm steel pipe in each duct segment
- El 120 Smoke Extract Duct: 2 x Ø 15mm steel pipe in each duct segment

Sealed with and appropriate duct sealant and 5 x 15mm EPDM tape

The duct suspension system complies with the following specification criteria:

Horizontal ducts:

ı	Fire resistance	Max tensile stress of suspension device	Max shearing stress of screws	Max distance from suspension device to duct joint
	EI 30	9 N/mm²	15 N/mm²	150mm
	EI 60	9 N/mm²	15 N/mm²	150mm
	EI 90	6 N/mm²	10 N/mm²	150mm
	EI 120	6 N/mm²	10 N/mm²	150mm
	El 120 (Smoke Extract)	6 N/mm²	10 N/mm ²	150mm

With distance between suspension devices not exceeding 1500mm

The lateral distance between the outer vertical surface of the steel duct and the centre line of the suspension rod shall not exceed 50mm

Vertical ducts:

With distance between supporting structures not exceeding 5m

Any duct penetrations comply with the following specification criteria:

Horizontal:

Penetrating in rigid wall constructions or flexible walls with a minimum thickness of:

- El30 70mm
- El 60 95mm
- Fl 90 95mm
- El 120 130mm

And with a fire resistance equal to or greater than the tested DuctRock® slab thickness.

For horizontal penetrations, the gap between the DuctRock® Slab and supporting structure will not exceed 20mm.

For horizontal penetrations U-profiles 1.5mm thick, with dimensions 60 x 25mm must be installed approximately 20mm from the wall and on both sides of the wall. The legs of the u-profiles are lowered into slits cut into DuctRock®Slab and fixed to the duct by means of

Ø 4.8mm x 100mm for EI 30 & EI 120

self-tapping screws; 4 on the top and bottom profiles and 2 on the vertical profiles.

Vertical:

Penetrating rigid floor constructions with a minimum thickness of:

- El 30 100mm
- El 60 100mm
- El 90 150mm
- El 120 150mm

And with a fire resistance equal to or greater than the tested DuctRock® slab thickness.

For vertical penetrations the duct is to be stabilised using 4 no. 'L' galvanised steel angles of $50 \times 50 \times 45 \times 2.5$ mm or a $40 \times 40 \times 3$ mm L profile which are fixed to the vertical steel duct and the supporting structure on both sides of the floor.

FIREPRO® DuctRock® Slab is associated with the following NBS specification clauses:

U90 General Ventilation – Domestic

490 Site applied insulation to ductwork

Y30 Mechanical Thermal Insulation

340 Mineral fibre slab insulation

DISCLAIMERS

ROCKWOOL Limited, its affiliates, its agents and employees and all persons acting on its or their behalf (collectively "ROCKWOOL"), disclaim any and all liability for any errors, inaccuracies or incompleteness contained in any datasheet or in any other disclosure relating to any product. Usage of the information remains under the sole responsibility of the purchaser and/or user.

ROCKWOOL makes no warranty, representation or guarantee regarding the information contained in the data sheet, the suitability of the products for any particular purposes or the continuing production of any product. To the maximum extent permitted by applicable law, ROCKWOOL disclaims (i) any and all liability arising out of the application, use of any product, misuse or inability to use the product (ii) any and all liability, including without limitation special, consequential or incidental damages, and (iii) any and all implied warranties, including warranties of fitness for particular purpose, non-infringement and merchantability.

Information contained in this data sheet is up-to-date as at the date of issue. As ROCKWOOL Limited cannot control or anticipate the conditions under which this product may be used, each user should review the information in specific context of the planned use. To the maximum extent permitted by law, ROCKWOOL Limited will not be responsible for damages of any nature resulting from the use or reliance upon the information contained in this data sheet. No express or implied warranties are given other than those implied by law.

SUPPORTING INFORMATION

For further information relating to any aspect of the FIREPRO range, please refer to the applicable ROCKWOOL standard details at www.rockwool.com/uk or contact the ROCKWOOL technical solution team on 01656 868490 or technical.solutions@rockwool.com.

SUSTAINABILITY

As an environmentally conscious company, ROCKWOOL promotes the sustainable production and use of insulation and is committed to a continuous process of environmental improvement.

All ROCKWOOL products provide outstanding thermal protection as well as four added benefits:

Fire resistance

Acoustic

Sustainable materials

Durability

HEALTH & SAFETY

The safety of ROCKWOOL stone wool is confirmed by current UK and Republic of Ireland health & safety regulations and EU directive 97/69/EC:ROCKWOOL fibres are not classified as a possible human carcinogen.

A Material Safety Data Sheet is available and can be downloaded from www.rockwool.com/uk to assist in the preparation of risk assessments, as required by the Control of Substances Hazardous to Health Regulations (COSHH).

ENVIRONMENT

Made from a renewable and plentiful naturally occuring resource, ROCKWOOL insulation saves fuel costs and energy in use and relies on trapped air for its thermal properties.

ROCKWOOL insulation does not contain (and has never contained) gases that have ozone depletion potential (ODP) or global warming potential (GWP).

ROCKWOOL is approximately 97% recyclable. For waste ROCKWOOL material that may be generated during installation or at end of life, we are happy to discuss the individual requirements of contractors and users considering returning these materials to our factory for recycling.
