

Technical Data

PowerFlex® 700H High Power Adjustable Frequency AC Drives

PowerFlex 700H Adjustable Frequency AC Drive Technical Data

The PowerFlex 700H AC drive offers a cost-effective, compact package for general purpose, variable speed applications. It is designed to meet the demands for space, flexibility and performance. The many features allow the user to easily configure the drive for most application needs. Ratings currently available include 200 to 450 HP output at 480V AC input.

An LCD Human Interface Module (also used with the PowerFlex[®] 70, 700 and 700S) provides multilingual text for startup, metering, programming, and troubleshooting.

PowerFlex 700H AC drives are configurable for Volts-per-Hertz or Sensorless Vector control modes to meet a wide variety of application needs. This control is housed in a module which is separately removable from the power structure. The control module is the same for all drive ratings, simplifying installation and maintenance for the entire product line. Optional I/O is available as 24V DC or 115V AC.

Optional internal communication modules are available as user-installed kits. These provide fast and efficient control and/or data exchange with host controllers over popular interfaces. These interfaces include; DeviceNetTM, ControlNetTM, Ethernet/IP, Profibus, Interbus, Remote I/O, Serial Communications and other open control and communication networks. PC tools such as DriveExplorerTM and DriveToolsTM SP assist with programming, monitoring and troubleshooting the PowerFlex 700H.

Flexible Packaging and Mounting

Flexible Programming, Hardware, and Communication Interfaces.

- Advanced features and parameter set modeled after the PowerFlex® 700 AC drive.
- Standard I/O includes either 24V or 115V digital I/O plus analog I/O.
- NetLinxTM communication options, including DeviceNetTM, ControlNetTM, and EtherNet/IP networks.

Easy to Use

- Full-featured LCD Human Interface Module (HIM) with multi-line and multi-lingual display simplifies programming.
 - Large and easy to read 7 line x 21 character backlit display
 - Variety of languages (English, French, German, Italian, Spanish, Portuguese, Dutch)
 - Alternate function keys for shortcuts to common tasks
 - "Calculator-like" number pad for fast and easy data entry (Full Numeric version only)
 - Control keys for local start, stop, speed, and direction
 - Remote versions for panel mount application
- S.M.A.R.T. Start and assisted startup routines in the LCD HIM allow for easy configuring and tuning of the drive.
- Pull-apart control terminal blocks allow for easy wiring and quick disconnect of I/O wiring.
- Easy-to-remove control module is common among all PowerFlex 700H power ratings.
- Optimized global voltage settings designed to worldwide standards allow quick set-up anywhere in the world.
- PC-based configuration tools include:
 - DriveExplorerTM and DriveExplorer Lite
 A simple and flexible "On-line" tool for monitoring and configuration while connected to a drive.
 - DriveTools[™] SP A suite of software tools which provide an intuitive means for programming, troubleshooting and maintaining Allen-Bradley AC & DC drives.

Industry-Standard Packaging

- Modular design and high degree of power structure commonality with equivalent PowerFlex® 700S AC drive ratings for reduced spare parts stocking.
- Standard floor-standing cabinet designs (frame 10 and larger) for compact stand-alone drive applications or multidrive lineups.

Catalog Number Explanation

These drives have dual current ratings; one for normal duty applications, and one for heavy duty applications (in parenthesis). The drive may be operated at either rating.
 The 2 sec. output current is only available at initial start or drive operating at light load.

Position 9 — Human Interface Modules (HIM)

Product Selection

Option Selection

Position 9 of the catalog string specifies the Human Interface Module (HIM). Four LCD styles are available as well as a blank plate. These HIMs can be factory or user installed.

DPI/SCANport™ One to Two Port Splitter Cable	1203-S03

• Includes an interface cable (1202-C30) for connection to drive.

Required only when HIM is used as handheld or remote.

Required in addition to 20-HIM-H10 for distances to a total maximum of 10 Meter (32.8 Feet).

Reflected Wave Reduction

Terminator

Description 0	Used with	Catalog Number (Loose Kit)
IP65 (NEMA Type4x) Connection Cable Included	0.37-1.5 kW (0.5-2 HP) 460V Drives 0.75-597 kW (1-800 HP) 575V Drives	1204-TFA1
	1.5-597 kW (2-800 HP) 460V Drives 0.75-597 kW (1-800 HP) 575 Drives	1204-TFB2

Correct terminator selection is dependent on motor characteristics, cable type and cable length. Refer to
publication 1204-1.0 for application details before ordering.

Product Selection

Power Wiring

The PowerFlex 700H has the following built in protective features to help simplify installation:

- Ground fault protection during start up and running ensures reliable operation
- · Electronic motor overload protection increases motor life
- To ensure compatibility with ungrounded systems, Frame 10 drives incorporate removable MOV to ground and common mode capacitors to ground. Frame 9 drives can be specially ordered to allow compatibility with ungrounded systems.
- 6 kV transient protection provides increased robustness for 380-480V system voltages

There are many other factors that must be considered for optimal performance in any given application. The block diagram below highlights the primary installation considerations.

Terminals

Terminal Locations - Frame 9

Power Terminal Specifications - Frame 9

			Wire Size Ra	Wire Size Range 00		
No.	Name	Description	Maximum	Minimum	Recommended	
1	Input Power Terminal Block L1, L2, L3	Input power	185.0 mm ² (350 MCM)	95.0 mm ² (4/0 AWG)	40 N-m (354 lbin.)	
2)	Output Power Terminal Block U/T1, V/T2, W/T3	Motor connections	185.0 mm ² (350 MCM)	95.0 mm ² (4/0 AWG)	40 N-m (354 lbin.)	
			-	1		
3)	SHLD Terminal, PE, Motor Ground	Terminating point for wiring shields	95.0 mm ² (4/0 AWG)	5.0 mm2 (10 AWG)	22 N-m (195 lbin.)	
4)	DC Bus ❷ (2 Terminals; DC–, DC+)	DC input or external brake (Internal Brake option not ordered)	185.0 mm ² (350 MCM)	95.0 mm ² (4/0 AWG)	40 N-m (354 lbin.)	
	DC Bus w/Brake @ (3 Terminals; DC-, DC+/R+, R-)	DC input/internal brake (Internal Brake option is ordered)	185.0 mm ² (350 MCM)	95.0 mm ² (4/0 AWG)	40 N-m (354 lbin.)	

5 Cable Clamp for Strain Relief

• Do Not exceed maximum wire size. Parallel connections may be required.

DC terminal and brake lugs can be removed.

Maximum/minimum sizes that the terminal block will accept - these are not recommendations.

Terminals (continued)

Terminal Locations - Frame 10

Power Terminal Specifications - Frame 10

			Wire Size Ra	Wire Size Range 00		Terminal Bolt
No.	Name	Description	Maximum	Minimum	Recommended	Size 00
1	Input Power Terminal Block	Input power	300 mm ² (600 MCM)	2.1 mm ² (14 AWG)	40 N-m (354 lbin.)	M12
2	Output Power Terminal Block ❸ U/T1, V/T2, W/T3	Motor connections	300 mm ² (600 MCM)	2.1 mm ² (14 AWG)	40 N-m (354 lbin.)	M12
				-		
3	SHLD Terminal, PE, Motor Ground O	Terminating point for wiring shields	300 mm ² (600 MCM)	2.1 mm ² (14 AWG)	40 N-m (354 lbin.)	M10
4)	DC Bus ❸ (2 Terminals; DC–, DC+)	DC input or external brake (Internal Brake option not ordered)	300 mm ² (600 MCM)	2.1 mm ² (14 AWG)	40 N-m (354 lbin.)	M12
	DC Bus w/Brake @ (3 Terminals; DC-, DC+/R+, R-)	DC input/internal brake (Internal Brake option is ordered)	300 mm ² (600 MCM)	2.1 mm ² (14 AWG)	40 N-m (354 lbin.)	M12

Cable Clamp for Strain Relief 5

Maximum/minimum sizes that the terminal block will accept - these are not recommendations. Ø

0

Do Not exceed maximum wire size. Parallel connections may be required. These connections are bus bar type terminations and require the use of lug type connectors. Apply counter torque to the nut on the other side of terminations when tightening or loosening the terminal bolt in order to avoid damage to the terminal. Ø

[€]

Control Terminals

I/O Terminal Blocks & Jumpers

I/O Terminal Block Specifications

			Wire Size Range 0		Torque	
No.	Name	Description	Maximum	Minimum	Maximum	Recommended
1	Analog I/O	Analog I/O Signals	2.5 mm ² (14 AWG)	0.5 mm ² (22 AWG)	0.2 N-m 1.8 lbin.	0.2 N-m 1.8 lbin.
2	Digital Inputs	Digital Input Signals	2.5 mm ² (14 AWG)	0.5 mm ² (22 AWG)	0.2 N-m 1.8 lbin.	0.2 N-m 1.8 lbin.
3	Digital Outputs	Digital Out Relays	2.5 mm ² (14 AWG)	0.5 mm ² (22 AWG)	0.5 N-m 4.5 lbin.	0.5 N-m 4.5 lbin.

• Maximum/minimum sizes that the terminal block will accept - these are not recommendations.

Control Terminals (continued)

I/O Terminal Designations

	No.	Signal	Factory Default	Description	Related Parameter(s)
	1	Analog In 1 (-) 0	4	Isolated G, bipolar, differential, 9 bit & sign, 88k ohm input	320 -
~	2	Analog In 1 (+) 0		impedance. A jumper (page 14) selects: 0-10V, ±10V, 4-20mA. Default: 0-10V (Ri =200k), 4-20mA (Ri=100 ohm).	327
	3	Analog In 2 (–) 0		Detault. $0 - 100$ ($Hi = 200$ k), $4 - 2011$ A ($Hi = 100$ 01111).	
	4	Analog In 2 (+) 0			
	5	-10V Pot Reference	-	2k ohm minimum, 10 mA maximum load, 1% accuracy.	
	6	Pot Common (GND)		For (+) and (-) 10V pot references.	
10	7	+10V Pot Reference	-	2k ohm minimum, 10mA maximum load, 1% accuracy.	
20	8	Analog Out 1 (+)	4	Bipolar (current out is not bipolar), 9 bit & sign, 2k ohm minimum	
	9	Analog Out Common		load. A jumper (see page 14) selects: 0-10V, ±10V, 4-20mA.	347
	10	Analog Out 2 (+)			
	11	Digital In 1	Stop - CF	115V AC, 50/60 Hz - Opto isolated	
	12	Digital In 2	Start	Low State: less than 30V AC High State: greater than 40V AC	366
	13	Digital In 3	Jog	<u>24V DC</u> - Opto isolated (250V)	
	14	Digital In 4	Speed Sel 1	Low State: less than 5V DC	
	15	Digital In 5	Speed Sel 2	High State: greater than 20V DC 11.2 mA DC	
	16	Digital In 6/Hardware Enable, see pg. <u>15</u>	Speed Sel 3	IT 2 MA DC Enable: Digital Input 6 is jumper selectable for HW Enable. On-Time: < 16.7ms, Off-Time < 1ms	
	17 18	Digital In Common		Allows source or sink operation. Terminals 17/18 & 19 can also be used to provide backup power to DPI and control devices.	
	19	+24VDC 1	-	Drive supplied logic input power.	
	20	24V Common 2	-	Common for internal power supply.	1
	21	Digital Out 1 – N.C. O	Fault	Max. Resistive Load:	380 -
21	22	Digital Out 1 Common		240V AC/30V DC – 1200VA, 150W Max. Current: 5A. Min. Load: 10mA	391
	23	Digital Out 1 – N.O. ❸	NOT Fault	Max. Inductive Load:	
	24	Digital Out 2 – N.C. 3	NOT Run	240V AC/30V DC - 840VA, 105W	
	25	Digital Out 2/3 Com.		Max. Current: 3.5A, Min. Load: 10mA	
	26	Digital Out 3 – N.O. 🛛	Run		

• Important: Input must be configured with a jumper. Drive damage may occur if jumper is not installed properly. Refer to page 14.

2 150mA maximum Load. Not present on 115V versions. Can be used to provide control power from an external 24V source when main power is not applied. Refer to page 15.

Contacts in unpowered state. Any relay programmed as Fault or Alarm will energize (pick up) when power is applied to drive and deenergize (drop out) when a fault or alarm exists. Relays selected for other functions will energize only when that condition exists and will deenergize when condition is removed.

• These inputs/outputs are dependant on a number of parameters (see "Related Parameters").

Differential Isolation - External source must be maintained at less than 160V with respect to PE. Input provides high common mode immunity.

I/O Cable Grounding

When installing/stripping shielded multi-conductor cable for analog and digital I/O, allow sufficient distance from the terminal plug to permit attachment to the cable clamp for grounding and strain relief.

Analog I/O Configuration

Important: Analog I/O must be configured through programming, as well as the jumpers shown below.

I/O Configuration

Signal	Jumper	Setting					
Analog	J1 (Analog In 1)	0-20 mA		0-10V		±10V	
Inputs	J2 (Analog In 2)	J1 A B C D 0000	J2 A B C D 0000	J1 A B C D 0000	J2 A B C D 0000	J1 A B C D 0000	J2 A B C D 0000
Analog	J3 (Analog Out 1)	0-20 mA		0-10V		±10V	
Outputs	J4 (Analog Out 2)		J4 A B C D 0000	J3 A B C D 0000	J4 A B C D 0000	J3 A B C D 0000	J4 A B C D 0000

Hardware Enable Circuitry

By default, the user can program a digital input as an Enable input. The status of this input is *interpreted by drive software*. If the application requires the drive to be disabled *without* software interpretation, a "dedicated" hardware enable configuration can be utilized. This is done by removing jumper J5 and wiring the enable input to "Digital In 6" (see below). Verify that [Digital In6 Sel], parameter 366 is set to "1, Enable."

Hardware Enable Configuration

e (No Hardware Enable)

Auxiliary Power Supply

You may use an auxiliary power supply to keep the PowerFlex 700H Control Unit energized, when input power is deenergized. This provides back-up power for the Control Unit and is sufficient for setting parameters. Connect 24V DC power to pin 19 and 24V DC common to pin 20 of the 24V DC version of the I/O card.

Auxiliary Power Supply Specifications

Voltage	Current (Min)	Current (Max)
24V DC ± 15%	150 mA	250 mA

If 24V terminals of several drives are connected in parallel, we recommend using a diode circuit to block current flow in the opposite direction. Reverse current flow could damage the Control Board.

I/O Wiring Examples

Input/Output	Connection Example	Required Parameter Changes
Potentiometer Unipolar Speed Reference 10k Ohm Pot. Recommended (2k Ohm Minimum)		 Adjust Scaling: Parameters 91/92 and 325/326 View Results: Parameter 002
Joystick Bipolar Speed Reference • ±10V Input		 Set Direction Mode: Parameter 190 = "1, Bipolar" Adjust Scaling: Parameters 91/92 and 325/326 View Results: Parameter 002

Analog Current Input Unipolar Speed Reference 4-20 mA Input		 Configure Input for Current: Parameter 320 and add jumper at appropriate terminals Adjust Scaling: Parameters 91/92 and 325/326 View results: Parameter 002
Analog Input, PTC PTC OT set > 5V PTC OT cleared < 4V PTC Short < 0.2V	1.8k PTC	 Set Drive Alarm 1: Parameter 211, bit 11 = "True" Set Fault Config 1: Parameter 238, bit 7 = "Enabled" Set Alarm Config 1: Parameter 259, bit 11 = "Enabled"
Analog Output ±10V, 4-20 mA Bipolar +10V Unipolar (shown)		 Configure with Parameter 340 Select Source Value: Parameter 384, [Digital Out1 Sel] Adjust Scaling: Parameters 343/344
2-Wire Control Non- Reversing [®] 24V DC internal supply	12 II II II Stop-Run II 20	 Disable Digital Input:#1: Parameter 361 = "0, Unused" Set Digital Input #2: Parameter 362 = "7, Run" Set Direction Mode: Parameter 190 = "0, Unipolar"

Refer to the Installation Manual for important bipolar wiring information.
 Important: Programming inputs for 2 wire control deactivates all HIM Start buttons.

I/O Wiring Examples (continued)

Input/Output	Connection Example	Required Parameter Changes
2-Wire Control Reversing External supply (I/O Board dependent)	Neutral/	 Set Digital Input:#1: Parameter 361 = "8, Run Forward" Set Digital Input #2: Parameter 362 = "9, Run Reverse"
3-Wire Control Internal supply	Stop 11 12 12 12 12 12 12 12 12 12 12 12 12	No Changes Required
3-Wire Control External supply (I/O Board dependent). Requires 3-wire functions only ([Digital In1 Sel]). Using 2-wire selections will cause a type 2 alarm.	115V/O +24V Stop 11 12 Start Neutral/ Common 17	No Changes Required
Digital Output Relays shown in powered state with drive faulted. 2 relays at terminals 24-26.	Power Source	Select Source to Activate: Parameters 380/384
Enable Input		 Configure with parameter 366 For dedicated hardware Enable: Remove Jumper J5 (see page 15)

• Important: Programming inputs for 2 wire control deactivates all HIM Start buttons.

Cable Recommendations

Important points to remember about I/O wiring:

- Always use copper wire.
- Wire with an insulation rating of 600V or greater is recommended.
- Control and signal wires should be separated from power wires by at least 0.3 meters (1 foot).

Important: I/O terminals labeled "(–)" or "Common" <u>are not</u> referenced to earth ground and are designed to greatly reduce common mode interference. Grounding these terminals can cause signal noise.

Signal and Control Wire Types

Recommended Signal Wire

Signal Type	Wire Type(s)	Description	Minimum Insulation Rating
Analog I/O	Belden 8760/9460 (or equiv.)	0.750 mm ² (18AWG), twisted pair, 100% shield with drain.	300V, 75-90 degrees C
	Belden 8770 (or equiv.)	0.750 mm ² (18AWG), 3 cond., shielded for remote pot only.	(167-194 degrees F)
FMC Compliance	Refer to Installation Manual for c	letails	

• If the wires are short and contained within a cabinet which has no sensitive circuits, the use of shielded wire may not be necessary, but is always recommended.

Recommended Control Wire for Digital I/O

Туре	Wire Type(s)	Description	Minimum Insulation Rating
Unshielded	Per US NEC or applicable national or local code		300V, 60 degrees C
Shielded	Multi-conductor shielded cable such as Belden 8770 (or equiv.)	0.750 mm ² (18 AWG), 3 conductor, shielded.	(140 degrees F)

Cable Types Acceptable for 200-600 Volt Installations

A variety of cable types are acceptable for drive installations. For many installations, unshielded cable is adequate, provided it can be separated from sensitive circuits. As an approximate guide, allow a spacing of 0.3 meters (1 foot) for every 10 meters (32.8 feet) of length. In all cases, long parallel runs must be avoided. Do not use cable with an insulation thickness less than or equal to 15 mils (0.4 mm/0.015 in.). Use Copper wire only. Wire gauge requirements and recommendations are based on 75 degrees C. Do not reduce wire gauge when using higher temperature wire.

Unshielded Cable

THHN, THWN or similar wire is acceptable for drive installation in dry environments provided adequate free air space and/or conduit fill rates limits are provided. **Do not use THHN or similarly coated wire in wet areas**. Any wire chosen must have a minimum insulation thickness of 15 mils (0.4mm/0.015 in.) and should not have large variations in insulation concentricity.

Shielded Cable

Shielded cable contains all of the general benefits of multi-conductor cable with the added benefit of a copper braided shield that can contain much of the noise generated by a typical AC drive. Strong consideration for shielded cable should be given in installations with sensitive equipment such as weigh scales, capacitive proximity switches and other devices that may be affected by electrical noise in the distribution system. Applications with large numbers of drives in a similar location, imposed EMC regulations or a high degree of communications/ networking are also good candidates for shielded cable.

Cable Recommendations (continued)

Shielded cable may also help reduce shaft voltage and induced bearing currents for some applications. In addition, the increased impedance of shielded cable may help extend the distance that the motor can be located from the drive without the addition of motor protective devices such as terminator networks. Refer to *Reflected Wave* in "Wiring and Grounding Guidelines for PWM AC Drives," publication DRIVES-IN001A-EN-P.

Consideration should be given to all of the general specifications dictated by the environment of the installation, including temperature, flexibility, moisture characteristics and chemical resistance. In addition, a braided shield should be included and be specified by the cable manufacturer as having coverage of at least 75%. An additional foil shield can greatly improve noise containment.

A good example of recommended cable is Belden® 295xx (xx determines gauge). This cable has four (4) XLPE insulated conductors with a 100% coverage foil and an 85% coverage copper braided shield (with drain wire) surrounded by a PVC jacket.

Other types of shielded cable are available, but the selection of these types may limit the allowable cable length. Particularly, some of the newer cables twist 4 conductors of THHN wire and wrap them tightly with a foil shield. This construction can greatly increase the cable charging current required and reduce the overall drive performance. Unless specified in the individual distance tables as tested with the drive, these cables are not recommended and their performance against the lead length limits supplied is not known.

Armored Cable

Cable with continuous aluminum armor is often recommended in drive system applications or specific industries. It offers most of the advantages of standard shielded cable and also combines considerable mechanical strength and resistance to moisture. It can be installed in concealed and exposed manners and removes the requirement for conduit (EMT) in the installation. It can also be directly buried or embedded in concrete.

Because noise containment can be affected by incidental grounding of the armor to building steel when the cable is mounted, it is recommended the armored cable have an overall PVC jacket. Refer to "Wire Types," in publication DRIVES-IN001, *Wiring and Grounding Guidelines for Pulse Width Modulated (PWM) AC Drives*.

Interlocked armor is acceptable for shorter cable runs, but continuous welded armor is preferred.

Best performance is achieved with 3 spaced ground conductors, but acceptable performance below 200 HP is provided via a single ground conductor.

Recommended Shielded / Armored Cable

Location	Rating/Type	Description
Standard (Option 1)	600V, 90° C (194° F) XHHW2/RHW-2 Anixter B209500-B209507, Belden 29501-29507, or equivalent	 Four tinned copper conductors with XLPE insulation. Copper braid/aluminum foil combination shield and tinned copper drain wire. PVC jacket.
Standard (Option 2)	Tray rated 600V, 90° C (194° F) RHH/RHW-2 Anixter OLF-7xxxxx or equivalent	 Three tinned copper conductors with XLPE insulation. 5 mil single helical copper tape (25% overlap min.) with three bare copper grounds in contact with shield. PVC jacket.
Class I & II; Division I & II	Tray rated 600V, 90° C (194° F) RHH/RHW-2 Anixter 7V-7xxxx-3G or equivalent	 Three bare copper conductors with XLPE insulation and impervious corrugated continuously welded aluminum armor. Black sunlight resistant PVC jacket overall. Three copper grounds on #10 AWG and smaller.

Mounting

Operating Temperatures

Drive requires a minimum of 1300 m³/h (765 cfm) of cooling air.

Specifications

Category	Specification	PowerFlex 700H					
Control	Method:	Sine coded PWM with programmable carrier frequency. Ratings apply to all drives (refe to the <i>Derating Guidelines</i> in the PowerFlex Reference Manual). The drive can be supplied as 6 pulse or 12 pulse in a configured package.					
	Carrier Frequency:	Minimum: 1 kHz, Maximum: Dependent on drive rating					
	Output Voltage Range:	0 to rated motor voltage					
	Output Frequency Range:	0 to 320 Hz					
	Frequency Accuracy Digital Input: Analog Input:	Within ±0.01% of set output frequency. Within ±0.4% of maximum output frequency.					
	Frequency Control:	Speed regulation - with Slip Compensation 0.5% of base speed across 40:1 speed range 40:1 operating range					
	Selectable Motor Control:	Sensorless Vector with full tuning. Standard V/Hz with full custom capability.					
	Stop Modes:	Multiple programmable stop modes including - Ramp, Coast, DC-Brake, Ramp-to-Ho and S-curve.					
	Accel/Decel:	Two independently programmable accel and decel times. Each time may be programmed from 0 to 3276.7 seconds in 0.1 second increments.					
	S-Curve Time	0-100% of accel/decel time.					
	Intermittent Overload:	110% Overload capability for up to 1 minute 150% Overload capability for up to 2 seconds					
	Current Limit Capability:	Proactive Current Limit programmable from 20 to 160% of rated output current. Programmable proportional gain.					
	Electronic Motor Overload Protection:	Class 10 protection with speed sensitive response. Investigated by U.L. to comply with N.E.C. Article 430. U.L. File E59272, volume 12.					

Drive, Fuse & Circuit Breaker Ratings

The tables on page 25 provide drive ratings (including continuous, 1 minute & 2 second) and recommended AC line input fuse and circuit breaker information. Both types of short circuit protection are acceptable for UL and IEC requirements. Sizes listed are the recommended sizes <u>based on 40 degree C and the U.S. N.E.C.</u> Other country, state or local codes may require different ratings.

Fusing

If fuses are chosen as the desired protection method, refer to the recommended types listed below. If available amp ratings do not match the tables provided, the <u>closest</u> fuse rating that exceeds the drive rating should be chosen.

- IEC BS88 (British Standard) Parts 1 & 2*, EN60269-1, Parts 1 & 2, type gG or equivalent should be used.
- UL UL Class T, J or L must be used.
- * Typical designations include, but may not be limited to the following; Parts 1 & 2: AC, AD, BC, BD, CD, DD, ED, EFS, EF, FF, FG, GF, GG, GH.

Circuit Breakers

The "non-fuse" listings in the following tables include both circuit breakers (inverse time or instantaneous trip). **If one of these is chosen as the desired protection method**, the following requirements apply.

• IEC and UL – Both types of devices are acceptable for IEC and UL installations.

Support

Rockwell Automation is committed to maintaining and supporting Allen-Bradley drives and installations. Included in this commitment is start-up support and consultation for drive applications.

ProtectionPlus Drive Start-Up

With ProtectionPlus Drives Start-Up Services from Rockwell Automation, users can leverage the extensive product and industry experience of Rockwell Automation technicians to quickly commission drives and reduce the time between integration and actual start-up.

ProtectionPlus Drive Start-Up Services verify drive installation to ensure proper electrical, mechanical and environmental criteria are met. This includes verification of power and I/O wiring to the drive, custom drive configuration/tuning to meet application specific requirements, and diagnosing/troubleshooting problems that occur during a standalone drive start-up. ProtectionPlus can also extend an eligible product parts warranty and add a labor warranty. For more information about ProtectionPlus Drives Services, contact your local Rockwell Automation sales office or authorized distributor, or visit: http://support.rockwellautomation.com/SupportPrograms.

PowerFlex is a registered trademark of Rockwell Automation. DriveExplorer, DriveTools SP, DPI and PanelView are trademarks of Rockwell Automation. ControlNet is a trademark of ControlNet International, Ltd. DeviceNet is a trademark of the Open DeviceNet Vendor Association.
