DASH CAM

WIFI Connected

Full HD 1080P Wide Angle

INTRODUCTION

Welcome to use PEZTIO DASH CAM. This is Model, which equipped with WIFI function. Automatic start to record, just plug and play, video files will be saved on the memory card. Connect it to your cell phone though WIFI and check the videos on your phone album.

POWER SOURCE

Use car charger (5V 1A) to get power from cigarette lighter. Need to keep the power on to ensure the normal use.

> **WARNING:**
> Please keep the DASH CAM plugged into the power, plug and play it. This is a small capacity battery. It will automatically shut down after 10 seconds when the disconnect power.

MAIN FUNCTION

1. Build-in WIFI

Transfer your dash cam recordings to your smartphone or tablet over Wi-Fi using an app interface. This makes it easier than ever to share footage from your trips.

2. Loop Record

The Loop recording video can be set the timing 1 min, 3mins or 5 mins. It will save the vital videos in case losing or damaging the videos when an accident occurs, the TF card slipped out or the power connection is loosening.
3. Emergency Record

Parking Mode: When the Parking Mode is on, it will detect whether there is the moving object, and the recording will auto on for 10-20 seconds if it finds a moving object.

4. SOS mode

Press the **SOS button** to Lock the video currently being recorded. (If you set the loop recording time as 3 mins, when you press the SOS button, the dash cam will lock the video currently being recorded. The length of this locked video file is 3mins. The next loop recording period begins, and next video will not be locked)

PRODUCT STRUCTURE

No.	Name	Description
1	LCD Screen	1.5" TFT Color LCD Display.
2	OK Button	Confirms the action; Stop/Start the video recording.
3	Down Button	Move selector up; rewind
4	Mode Button	Convert the modes.
5	Up Button	Move selector down; fast forward
6	Menu Button	Enter/exit setup menu
7	Microphone	Records clear audio with the video footage.
8	Micro SD Card Slot	Provides expandable storage (up to 32GB, Class 10)
9	Sticker	Fix it on the front windshield
10	Mini USB Slot	USB port for charging or transferring data.
11	Reset slot	Press to force reset the device.
12	Power Button /WIFI Key	Power ON/OFF WIFI ON/OFF

WIFI TROUBLE SHOOTING

PROBLEM	SOLUTION
My phone has searched the WiFi of the dash cam but unable to connect?	1. Make sure no other device or phone is connected to the dash cam WiFi. The dash cam does not support connection with multiple devices at the same time. 2.Disconnect the Wifi and reconnect again. 3. Please restart your phone and try again. 4. Reset the dash cam if the above step does not work.
Can't connect two phones at once?	One dash cam wifi can only support one phone to connect. It does not support simultaneous connection of multiple devices.
How to reset Wifi password?	You can change the wifi ssid and wifi password in setting.
Must I download the videos to my phone? Can I check them directly?	Users of the IOS system can play back the video directly. The Android system user cannot directly play back the video, and the video needs to be downloaded to the mobile phone.
Real-time video playback on phones is not smooth	The distance between the phone and the dashcam is too far. It is the best to connect within 3m/9.8ft.
I can't connect	This WiFi is only used for data transfer of

the internet when I connect this WiFi?	dash cam and mobile phone, it can't access the Internet.
Why the videos are not clear when I check them from phone screen?	Due to the limitation of WiFi transmission rate, the videos you watch is only 640x360@60fps. So, we suggest you download the videos to your phone and watch them in Album. The downloaded video resolution can be up to 1920*1080P@60fps.
File download speed is very slow in app?	HD video files are large, please wait 2-3 minutes.

TROUBLE SHOOTING

PROBLEM	SOLUTION
Video Image is blurred.	Remove the protective lens cover, clean the lens, clean the windscreen!
I can only record a few minutes of videos on my memory card.	Change the recording size (Video Length function) to a smaller size. Increase the size of the MicroSD card. Max 32GB.
The DASH CAM is no response.	Please reset the DASH CAM.

The date & time on my DASH CAM is incorrect.	This time is the time when the product leaves the factory. Please calibrate in the settings.
Cannot remove the SD card.	With the card previously installed, you now need to push the card further inwards slightly, using your finger nail, until you hear and feel a small latch. Use the edge of a small coin if you have difficulty. Release pressure and the card will spring out sufficiently for you to take hold of it.
The SD card cannot be read.	Use a good quality branded SD card between 8GB and 32GB (Class 10 or UHS type 1) and format the card within the Setup menu.
Cannot insert the SD card	Micro SD card is very small and requires delicate use. Align the card with the diagram shown upon instruction and insert the card until you feel a slight spring resistance. You now need to push the card, using your finger nail, until you hear and feel a small latch. Release pressure and the card will stay retained within the device. Use the edge of a small coin if you have difficulty.
I can't delete files on my SD card within the DASH CAM.	Check to see if these files are 'protected', if so, please follow instructions to 'un-protect'.

The screen blanks after a few minutes.	The screen saver is set to ON. Change settings to OFF if required. Default setting is off.
The battery only last 10 seconds.	This battery can only reserve limited power. Plug and play it. Based on the design of power-off protection, the battery needs to reserve a part of power to support emergency recording function.
When I press the MENU button nothing happens.	This is normal during recording. Stop the recording before pressing the MENU button.
Find the DASH CAM a little heated after a period time of use.	The camera has metal frame with good thermal conductivity for extended life of cam. The Operating temperature is designed between -10℃ to 60℃, so don't worry, it is a common phenomenon.
Unresolved issues.	Reset the DASH CAM to the default settings within the Setup Menu and try again. Should the problem persist contact us by support e-mail.
