

**INSTALLATION GUIDE
MAGNETIC SOLAR PANEL MOUNT**

This item is shipped with a white plastic spacer and a metal ring. The metal ring is intended to be screwed to a non-magnetic surface. The plastic spacer is intended to be thrown away. Then, the actual magnet will be exposed. When this magnet is in contact with the metal ring, it is rated for 88 lbs each (176 lbs per solar panel mount). If the magnet is in contact with metal that's thinner than the metal ring, like sheet metal, the strength may be compromised. Please review the attached pictures that show the removable parts.
