Jezz Coleman at his workbench with all the products used in this build, including the 1:48 Kinetic Sea Harrier and Deluxe Materials AD55 Glue'n'Glaze, AD77 Plastic Magic, AD83 Plastic Magic 10 sec, BD38 Liquid Gravity and AD43 ROKET Hot

# Deluxe Materials Fixing a Jump-Jet!

Building the Kinetic Sea Harrier F/A-2 with Deluxe Materials Products

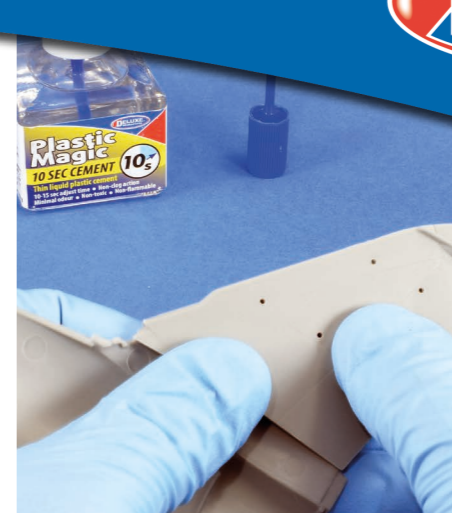

Use Plastic Magic AD83 where a longer working time is required. This is ideal for gluing the fuselage. This product has a 10-15 adjustment time

Plastic Magic AD83 allows an adjustment time before bringing parts together, leaves no residue, and gives a neat and invisible joint

Plastic Magic AD83 once again is the ideal product for joints that need time. Spread around the wing.....

.....and again there is an adjustment time before bringing the parts together

For parts that need instant bonding use Plastic Magic AD77. The high precision brush gives a clean, neat invisible joint

Plastic Magic AD77 will also give an instant, invisible bond to any joint.....

...and the high precision long reach brush enables perfect gluing in exposed outside parts or difficult places

Liquid Gravity BD38 acts as a free owing weighting system and is non-toxic. Pour to the desired weight....

...and apply a drop of ROKET Hot AD43 cyano to set it

Canopies are tricky, so Glue 'n' Glaze is perfect for this. This product dries crystal clear and remains flexible. Apply to the parts to be bonded and hold in place for around 15 mins until dry. The clean up any excess with some water
