## **BIOPACK APPLICATION:**

- 1 Hang every BioPack onto the plants to be treated. Note: some plants can share a bag if they are close enough. Zip ties work great but anything that holds them in place will work.
- 2 Once all the BioPacks are hung, cut the top two corners off the bags and tuck a leaf in opening so the mites have a "ladder" to the rest of the plant.
- There will probably be predatory mites stuck in the corner you cut off. Put those pieces over other leaves so you get every mite onto the plant.
- 4 Profit!
