

# Material & Handling

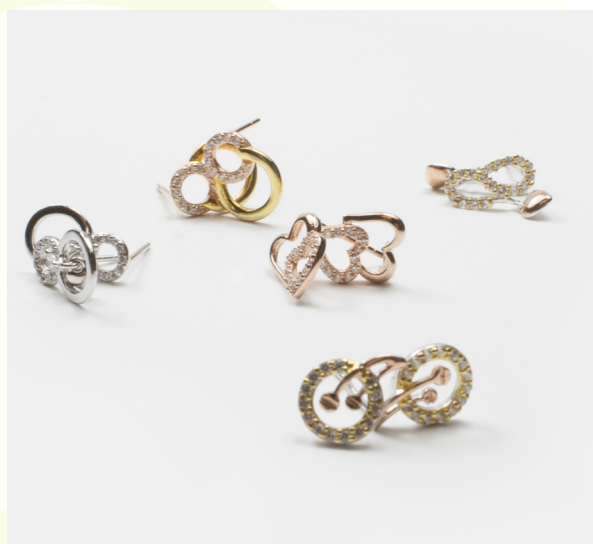

## 18K GOLD

18K means more gold and represents a higher standard for jewelry. Clarette gold jewels are all made from 18K gold, which is the best balance between durability and quality required to shape rings, earrings, necklaces and bracelets. It is recommended to maintain the vibrancy of the gold by simply wiping it with a soft and a dry cloth.

## Gold Vermeil

Gold Vermeil jewelry is the highest standard for gold plated jewelry. Clarette uses Gold Vermeil for plated Jewelry. The process consists of combining 925 sterling silver with a thick layer of 18K gold plating to deliver high-quality jewelry pieces.

Gold Vermeil jewelry requires special care, therefore it is crucial to avoid any contact with water which can discolor your gold Vermeil jewelry. It is advisable to store the ring in a dry place and avoid wearing the pieces while showering or washing hands.

## Sterling Silver

92.5% silver is the highest standard for silver Jewelry. Clarette uses 925 Sterling Silver for silver jewelry. Silver requires a delicate process of material and care. It is advisable to avoid contacting the jewelry with chemicals found in makeup, hair dyes, creams and others. It is important to avoid wearing the jewellery while washing hands, and showering to prevent the natural oxidation of silver with air.
