Dealing with Superbugs

Microbe Elimination Test Results*

(% CFU Reduction after 24 hours)

Am-Guard's anti-microbial surface actively kills microbes and is highly effective in eliminating or inhibiting the growth of the most common pathogens or 'superbugs'. The independent test results below show the biocidal capabilities of Am-Guard in terms of CFU reduction within 24 hours.

*In an independent lab test, 10 common microbes were selected, and each of them was incubated on panels for 24hrs at 37°C and >90% RH. As the table shows, Am-Guard panels demonstrate high antimicrobial activity. Use of Am-Guard, along with an adequate cleaning regime, would significantly reduce microbial growth, including dangerous pathogens.
