

Recycled chair

When we think of plastic waste, we usually think of packaging, but 90% of the world's toys are made of plastic and few are recycled. Now, Belgian company ecoBirdy has developed chairs and night lights made from recycled toys, to get children as young as four thinking about sustainability. The speckled effect helps with this, they say, as: "Kids should be able to recognise the 'magic flakes' as elements of old toys in the new furniture." ecobirdy.com
