"Technology managers
have become a strong
voice in our industry.

Their voice is important
on many levels. Not only
do technology managers
represent the 'customer'
for service providers and
manufacturers, many have
the experience, education,
and understanding to
design, install, program,
troubleshoot, commission,
and maintain AV systems
on their own. Whether a
technology manager has
worked previously as an
integrator, consultant,
programmer, or technician,
or they have developed
knowledge through formal
industry training and
on-the-job experience,
today's technology
managers establish
expectations and can
ensure that they are
receiving the quality of
product and level of service
appropriate to meet those
expectations."

—Steve Greenblatt
