## SHARP PN-Y SERIES OF LED DISPLAYS

Sharp Imaging and Information Company of America (SIICA), a division of Sharp Electronics Corporation, is introducing the PN-Y series of professional LED edge-lit displays. Available in 55-, 47-, 42-, or 32-inch class sizes, the PN-Y series of monitors offer businesses a commercial-grade LED display solution at an affordable price. This collection provides an intermediate range of options between consumer AQUOS televisions and the higher-end PN-U series of LED displays, making it ideal for small and mid-sized businesses.

## BENQ'S NEW PUBLIC INFORMATION DISPLAY

BenQ America Corp. has announced the release of the new 50-inch SV500 public information display (PID). Designed for retail, hospitality, corporate, and education sectors, the commercial-grade panel features FHD resolution, 400 nits of brightness, and flexible installation options to create video walls of up to 10x10 units easily. Equipped with BenQ's Multiple Display Administrator (MDA), the SV500 makes signage system management simple via remote monitoring and control capabilities, creating the newest member of the market's value-conscious signage category.

## FOUR WINDS' NEW USER SOFTWARE

Four Winds Interactive (FWI) has announced a new software release that improves how clients build, deploy, and manage their enterprise visual communications networks. The release is accompanied by a user-friendly "app store" containing hundreds of images, videos, apps, templates, and much more that can be used to quickly design and populate visual displays — whether one screen at a time, or enterprise-wide.

The software release, dubbed 5.0, has been in development for more than a year and has been designed to make creating an enterprise visual communications network as easy as programming a smartphone with user preferences.

Software 5.0 and the FWI Store are available now. Current clients can upgrade by contacting their FWI sales representative or visiting [www.fourwindsinteractive.com](http://www.fourwindsinteractive.com).

## PEERLESS FULLY-SEALED OUTDOOR DISPLAYS

Ideal for public transit, stadiums, zoos, amusement parks, marinas, restaurant patios, cruise ships and more, the Peerless-AV Xtreme displays are capable of year-round outdoor digital signage with Peerless-AV's weatherproof technology. To operate in extreme weather conditions, the first flat panel displays are 100 percent sealed and engineered to endure the outside elements in all seasons.

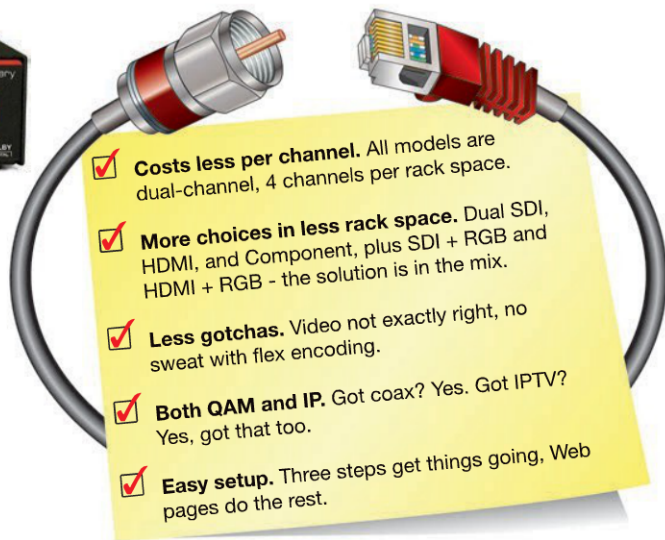

Ventless with full 1080p HD flatscreens, the Peerless-AV Xtreme displays are designed to keep out dirt, water, dust, and insects, while withstanding extreme heat (+140 degrees) and extreme cold (-40 degrees) without damaging the LCD. Relying on a patented Dynamic Thermal Transfer system to cool or warm internal components during extreme weather, Peerless-AV Xtreme displays remove the need for external filters, vents, and exhaust fans. In addition, the patented design completely seals all internal components as well as the cable entry — protecting the display from rain, sleet, snow, dust, insects, and even pressure washing.

## Why Integrators Luv our QMODs

**Over the past 5 years, you've told us how to make our great HDTV modulators even better. We listened and answered. Welcome to the next QMOD generation, with everything on your checklist, plus more:**

Learn how easy it is to **LUV** our QMODs at [qmodluv.com](http://qmodluv.com).

Modulators - Encoders - Tuners - Control
