## NEOTI AFFINITY SERIES

The Affinity Series is an all-in-one direct view LED Video Display solution, available in 1.2mm and 1.5mm pixel pitch options. The Affinity can be installed on a floor stand (with or without casters), or an easy to hang wall mount. This product is very versatile in that it can be easily be rolled from room to room for maximum usage, whether that in a corporate office, educational setting, or a place of worship. Optional interactive touch is available through Neoti's multi-touch modules, and an integrated sound bar is also available for a more immersive display.

Configurator eases integration planning for any application; it complements the start-to-finish support provided by Peerless-AV's LED video wall integration program, SEAMLESS by Peerless-AV.

Through this program and the new configurator, customers benefit from a dedicated team of experts along with high-quality custom solutions and the online tools to simplify the process. The new LED Video Wall Configurator allows users to simply and easily design an LED video wall and request a quote for a mount. When users are unsure of the video wall size needed, they can input room dimensions and explore different scenarios until they find the solution that meets their needs. They can continue through to request pricing, and all quotes will be stored for future reference. The configurator will also provide useful information such as mount weight, video wall power consumption, and video wall display resolution.

## PEERLESS AV LED VIDEO WALL CONFIGURATOR

This new online solution for integrators allows users to streamline the design of LED video walls, where they can obtain specifications, quotes, and support. For the range of installation venues, the LED Video Wall
