## MEETING ROOMS

### QSC Q-SYS CORE 510I

The QSC Q-SYS Core 510i Integrated Core processor leverages the latest Intel platform using a QSC-developed Linux realtime operating system to deliver a powerful audio, video, and control solution. The Core 510i processor offers the most flexible audio I/O configuration options of any processor in the Q-SYS catalog, with card-based I/O as well as native Q-LAN network channel and AES67 capabilities. It is ideal for applications that require a diverse mixture of analog, digital, and networked audio connectivity, including mid- to large-sized meeting spaces and hospitality applications. The Core 510i can be deployed in two different software configurable modes. Q-SYS Core mode handles all AVC processing including extensive resources for built-in acoustic echo cancellation that can be deployed with the new Q-SYS AV-to-USB Bridging solution for soft codec conferencing applications. I/O Frame mode provides support for up to 128x128 audio channels as an I/O peripheral into the Q-SYS system for processing on a separate Q-SYS Core processor.

### PEERLESS-AV VERTICAL LIFT CARTS

Peerless-AV has launched a new line of vertical lift carts (SR584VL2, SR584VL3). Ideal for corporate and education settings, the ADA-compliant, UL rated carts quickly adjust the height of interactive displays with the simple touch of a finger. Peerless-AV's new vertical lift carts allow users to quickly and easily raise or lower a display to their preferred height or for wheelchair accessibility. In lieu of purchasing multiple displays for multiple rooms, schools and businesses can now order one display and create a mobile solution that is used in numerous classrooms and conference rooms upon need, saving time and money. The carts' highly mobile solution uses 4-in. lockable casters, corner bumpers to prevent damage to walls and doors, integrated handles to help maneuver the cart, and an extension cord wrap for fast deployment. For huddle rooms or conference rooms dedicated to collaboration, Peerless-AV also offers a line of vertical lift wall mounts (SF684VL2, SF684VL3).

## COLLABORATE WITH VISION

The new Yamaha CS-700 combines best-in-class audio with HD video and content sharing, providing an intuitive user experience for the huddle room in one simple, wall-mounted system.

- USB audio and ultra-wide-angle HD video
- UCaaS integrated, Bluetooth® support, SIP interface
- Simple remote administration

Available this summer... **But see more now at [revolabs.com/huddle](http://revolabs.com/huddle)**
