

The **RMS Series 200 Mini Rainwater Harvesting Controller** is specifically designed to operate the RMS Rainwater Management Solutions Rain Harvesting System. This controller regulates the rainwater collection system, monitors and controls the system and provides data on the performance of the system.

The RMS Series 200 Mini Controller displays all of the information on an intuitive 5.7" color touch screen display. Each RMS Series 200 Mini controller is fully customizable for a project's specific needs.

Communications for building automation systems are available via a RS-232 connection and MODBUS RTU protocol. Alarms are provided to warn against failures or needed maintenance.
