

PLEASE FILL LIGHTER BEFORE FIRST USE OF YOUR BRIPE.

The lighter has been shipped to you without butane fuel due to shipping restrictions. Refill lighter using a standard butane refill canister available at various stores. Follow canister instructions and precautions.

Warning: Do not use lighter near flammable materials, clothing or skin. Never touch hot lighter head or use lighter until it is cool. Use only in well ventilated areas and keep away from children. Make sure flame is extinguished after each use of the lighter. The lighter flame cannot be seen in daylight so caution must be used to know when flame is lit and extinguished.

Traveling with lighter: Never place lighter in airport carry-on luggage. It will be taken by airport security. If you put the lighter in carry on luggage empty lighter completely of fuel by depressing fill nozzle at bottom with a pointed item until empty before placing in checked bags as fuel is not permitted onboard an aircraft.

If lighter does not light: First check to be sure that it has fuel and refill if necessary. If the flame is low adjust with bottom ring. If it sparks but won't light, bring spark mechanism closer to the head as it may have become misaligned.

Refilling the lighter: Completely empty before refilling by depressing bottom valve. Using the bottom fill valve adjustment dial, place on lowest setting before filling. Orient the fill valve facing up then gently depress butane refill can down into valve keeping both aligned very straight to avoid leakage of fuel as it is flammable and cold. Wait several minutes after filling for the lighter to warm up and the butane vapor to dissipate before lighting.

Flame adjustment: adjust to desired flame by spinning the bottom adjustment dial either clockwise or counter clockwise until you have the desired flame.

Discard defective lighter: If damaged, lighter should be immediately drained of fuel by depressing the bottom fill valve with a pointed object until empty. Discard lighter in a safe manner. Damaged or misused lighters are not returnable and not replaceable. Only new lighters that do not function properly may be returned for a replacement when drained of fuel and returned accompanied by a purchase receipt within 60 days of purchase to:
