Goat Milk Lotion

Our new Goat Milk Lotion was created using Lotionpro 165 as the primary emulsifier and features Euxyl PE 9010 as a non-paraben, non-formaldehyde preservative. Euxyl PE 9010 is combined with Potassium Sorbate and Sodium Benzoate to make a very effective preservative system for a difficult to preserve formulation. This formula has passed a USP 51 Preservative Efficacy Test.

When using a stick blender, care should be taken to avoid entraining a lot of air into the mixture (keep the head of the mixer deep in the formulation). These formulations are based on the weight of these ingredients. Please use a scale that can measure these amounts.

This formula makes 1000g or 34 oz. of lotion.
