From our Formulary Linen & Room Spray

The simplest formulations are made by mixing 1 part Caprol Micro Express (CME) with 9 parts water, and adding 1% fragrance, and a preservative, of course. If it's not clear, add a bit more CME, a few drops at a time with stirring until the mix clears. That's it.

Body Sprays can be created by substituting water soluble actives for any part of the Distilled Water. Also try Aloe Vera Juice, Herbal Extracts and Hydrosols.

One percent fragrance works well for a body spray, but if you want to use 2 or 3% fragrance in a room or body spray, you will need to increase the amount of CME used. A 3% fragrance load requires that you use about 15% CME, as demonstrated below.

Formula

| | Percent | Grams | Ounces | Ingredient |
|---------|---------|-------|--------|----------------------------|
| Phase A | 81.0 | 405 | 14.29 | Distilled water |
| | 15.0 | 75 | 2.65 | Caprol Micro Express (CME) |
| | 1.0 | 5.0 | 0.18 | Lotioncrafter PE 9010 |
| Phase B | 3.0 | 15.0 | 0.53 | Fragrance |

- 1. Combine Phase A ingredients with stirring.
- 2. Add Phase B fragrance to Phase A with whisking. If emulsion is not clear, add small amounts of CME drop-wise with stirring until mixture clears.

Makes 500 grams (17.64 oz)
