

JACK MASON

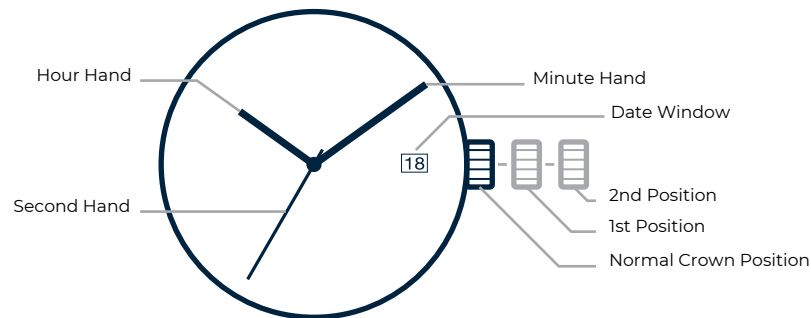

Ellum

Manual-wind 3-Hand Date

JM-H303-002

Sellita Caliber SW210-1

Setting The Time

1. Pull the crown out to the **2nd position**.
2. Turn the crown to set **Hour and Minute Hands**.
3. After the time is set, push the crown back to the **Normal position**. This will ensure proper water resistance.

Setting The Date

1. Pull the crown out to **1st position**.
2. Turn the crown clockwise to set the date.
* Please be mindful of AM/PM when setting the date.
3. After the date has been set, push the crown back to **Normal position**. This will ensure proper water resistance.

Winding the watch

1. In the Normal position, turn the crown clockwise repeatedly to wind the mainspring and get the second hand to start sweeping. From the full stop It should take 18-20 full rotations to mostly wind the watch. The SW210-1 has about 40 hours of power reserve when fully wound.

***When you feel resistance in the crown, do NOT continue to wind. There is a stopping point which means the mainspring is fully wound. Further winding can damage the mainspring and will need to be repaired.**

This kind of damage will NOT be covered under warranty.

It is good practice to wind the watch at the beginning or end of each day to ensure continued run time throughout the night.
