

Assembly Instructions for Hurricane Couplers

Quad & Dual

Step 1: Place the coupler with the hex holes pointing up

Step 2: Insert and press each QC plug down into the hex holes, one at a time.

Step 3: Place the coupler into a vise. Apply just enough pressure to firmly hold the coupler while tightening nozzles.

Step 4: Apply thread sealant or teflon tape to the threads of each nozzle then thread them into the coupler assembly. Do not over tighten the vise or allow the QC plugs to rotate while tightening or damage to the coupler could occur.
