ECOBLASTER™ (PORTABLE PRESSURE WASHER & WATER SOURCE)

The EcoBlaster is a complete pressure washing system in a box. These compact, self-contained units can be loaded into any vehicle or garden wagon, and are especially useful for cleaning in locations with limited access to water.

EcoBlaster incorporates the Mi-T-M ChoreMaster Series Pressure Washer (2700 PSI / 2.5 gallons per minute). It is powered by a Mi-T-M 190 Gas Motor with Direct Drive Axial Piston Pump with Brass Manifold. A 12.9 gallon water tank, 20 feet of high pressure hose and wand are included.

"What we needed most was portability...we have a rather large campus, and often times we have just one guy with no easy water source, operating out of a small mule or electric vehicle. We were also unable to mount anything permanently to the vehicle as it is used for various tasks. We love the EcoBlasters that we currently have as they are everything in one." Jessica Regensberg University of New Mexico, NM
