TYPE 522 SHOWER SEAT LOAD TEST

On August 24th, 2011 Hand Rail Industries carried out a load test on our Type 522 Folding Shower Seat. This test was performed under normal installation conditions by loading weights totaling 206kg centrally on the seat top.

No Distortion of flexing in the brackets was evident. The seat top flexed 8mm at the centre and returned to its original condition on removal of the weights.

No welding or material failure occurred to either the brackets or seat top.
