

Robust Anodized Aluminium Mouse Pad
Optimized Tracking Surface • Large Working Area • Anti-Slip Rubber

MAXIMUM GLIDE AND LONG-LASTING DURABILITY

The surface of the Metapad-2 is made of a high-quality, long-lifespan anodised aluminium. It is tuned to deliver best in class glide characteristics without sacrificing control, allowing for both consistent snap targeting and pixel-precise shots. The micro-texture surface is optimised for gaming sensors, so you get a better glide feel without sacrificing control or accuracy. The non-slip base provides a cushion with just the right amount of grip. Moreover, it is made of natural rubber, so it does not have a harsh chemical odour.
