

Installing a Seat Post Hitch

Hitch

Open the hitch using a 3/16" hex key.

Place collar around your seat post with the bevel at the far end facing upwards.

Adjust height of hitch to allow the trailer to sit as level as possible when attached.

The hitch is a snug fit. If it fits loosely, it is too large for your seat post.

Assemble collar and tighten screws. For best results, tighten each screw part way, then repeat with back and forth tightening until the hitch is firmly attached to your bike's seat post.

Once the hitch is installed, leave it on your bike. If you are using more than one bike, purchase a second hitch.
