Stille forceps

**Stille forceps** have perfect balance and feel. In manufacturing, the tension of the instrument is adjusted, in order not to tire the surgeon's hand but yet have enough spring to ensure complete control of the instrument.

Careful attention is given to the teeth in order to permit easy grasp and release. Equal attention is given to the serrations, thus enabling perfect mesh. The points will not overlap when closing the forceps.

### How to test Stille forceps:

Press the shanks slowly together.

Check that the tips close evenly and do not overlap.

Check that the serrations and the teeth mesh properly.

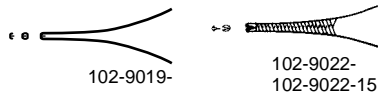

Press the shanks harder together; the tips must not open at the points.

**ADSON**

Tissue forceps with very delicate points and 1x2 fine teeth.  
 Used in most specialties for delicate work.
