Zepf SuperCut Scissors

Zepf SuperCut Scissors

Zepf is world famous for our unique high quality scissors. Zepf scissors are extremely light and well balanced. They cut cleanly, not only when new, but also throughout their long life. This is due to careful attention to every part of the instrument during design and production.

Zepf scissors offer maximum cutting force for all kinds of soft tissue with a minimum of effort. They are available as ordinary stainless steel scissors, SuperCut scissors and Ergonomic scissors.

SuperCut Scissors

What are SuperCut Scissors?

Zepf SuperCut Scissors have an unrivaled cutting performance. In addition to incorporating all the advantages of conventional scissors, they are sharper.

Why are Zepf SuperCut Scissors superior to ordinary scissors?

Because they have specially designed cutting edges – one scissors-ground and one knife-ground blade – the scissors actually cut their way through the tissue.

What other advantages do Zepf SuperCut Scissors offer?

They cut with extreme precision right down to the points of the blades. The special grind makes them suitable both for right-handed and for left-handed surgeons.

Are Zepf SuperCut Scissors all-purpose scissors?

Yes, in the case of tissue, because they cut coarse tissue as efficiently as fine, and with as great precision. Sutures must be avoided as they may damage the fine edges of the scissors. Special Zepf scissors are available for cutting sutures.

Can you resharpen SuperCut Scissors?

Yes, of course. Just like any other scissors, SuperCut Scissors require sharpening occasionally. When it is time for regrinding, Zepf's own instrument service department will ensure that the scissors are taken care of with the utmost precision.

How can you recognize Zepf SuperCut Scissors?

The shafts are black-chromed.

Zepf Ergonomic Scissors

Surgical scissors are normally held in a precision grip, involving the thumb and the third or fourth finger. The grip works best when the hand is close to its basic resting position – a position that is the most comfortable. When using traditional scissors, the hand is not held in this position, but rather in a strained, more closed position.

The way to achieve this resting position is to use scissors with a shank design that is slightly different compared to traditional scissors.

The idea behind this new shape is ergonomics. By using ergonomically designed scissors, time consuming procedures can be performed with less strain on the hand. The effect of this is better comfort that enables the surgeon to avoid fatigue in the hand.

Of course the ergonomic scissors have the rest of the features of Zepf SuperCut Scissors.

Scissors should only be used for their intended purpose. Do not cut suture, gauze or wire with normal scissors or SuperCut scissors. To maintain the unique cutting performance, SuperCut scissors must be returned to Zepf Service for sharpening. Incorrect handling or use of Zepf scissors will invalidate the warranty.

How to test Zepf scissors:

- Feel - smooth motion and soft resistance
- Cut - evenly, all the way to the tip
- Listen - no strange sounds
- Look – no visual damages on the blades
