

CATCH-A-Raindrop™

THE HARVESTING RAINWATER COLANDER™

- Collect the rainfall from your rooftop
- Filter any large or coarse debris from the downspout
- Store the rain in barrels or connect to hose for directly watering plants
- Reuse the rain to water houseplants, gardens, and landscape, or wash cars

INCLUDES

- Rainwater Colander with Cap
- Downspout Clip with Zip Screw
- Easy Installation Instructions

- Fits most standard residential downspouts
- Available for 2x3 and 3x4 downspouts
- Small, discrete, and worry-free
- Affordable way to conserve water
- Plants love the pH neutral, fluoride- and chlorine-free water
- Diverts water away from your home's foundation
- Attach to a regular garden hose or use cap

HOW IT WORKS

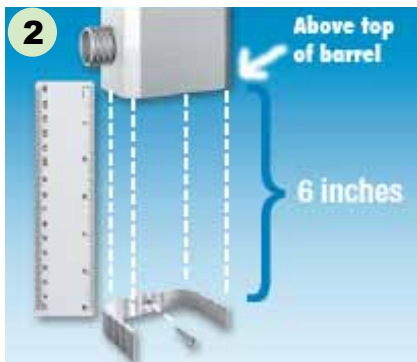

The **CATCH-A-Raindrop™ Rainwater Colander™** connects to a vertical downspout and captures 50% of rainwater while debris is directed down the gutter, diverting filtered rainwater into a storage tank or rain barrel, or directly to a garden.

As the water travels down the inside walls of the downspout, the rainwater adheres to the walls of the downspout and does not free-fall from the center. The Rainwater Colander™ installed inside the downspout captures water free of large debris in a 2-inch tall reservoir that has an outlet to attach to a garden hose or cap when not in use. The innovative design of the patented colander automatically diverts rainwater back into the downspout when the rain barrel is full or a cap is attached.

Easy to install and maintain. Makes winterizing your rain barrel a snap. Can be used without a rain barrel to get rainwater to your garden or plants every time it rains!
