Oops! Those "harmless" germanium capsules you just swallowed may have an extra proton in each nucleus.

Is it good news or bad news? Why?
Oops! Those "harmless" germanium capsules you just swallowed may have an extra proton in each nucleus.
Is it good news or bad news? Why?

Answers:
This is bad news, for a germanium nucleus with an additional proton is not germanium, but arsenic! Check the periodic table ... Germanium is atomic number 32, and arsenic is atomic number 33.
