

S550 Mustang Resonator Delete Cap Installation Guide

Stock Resonator

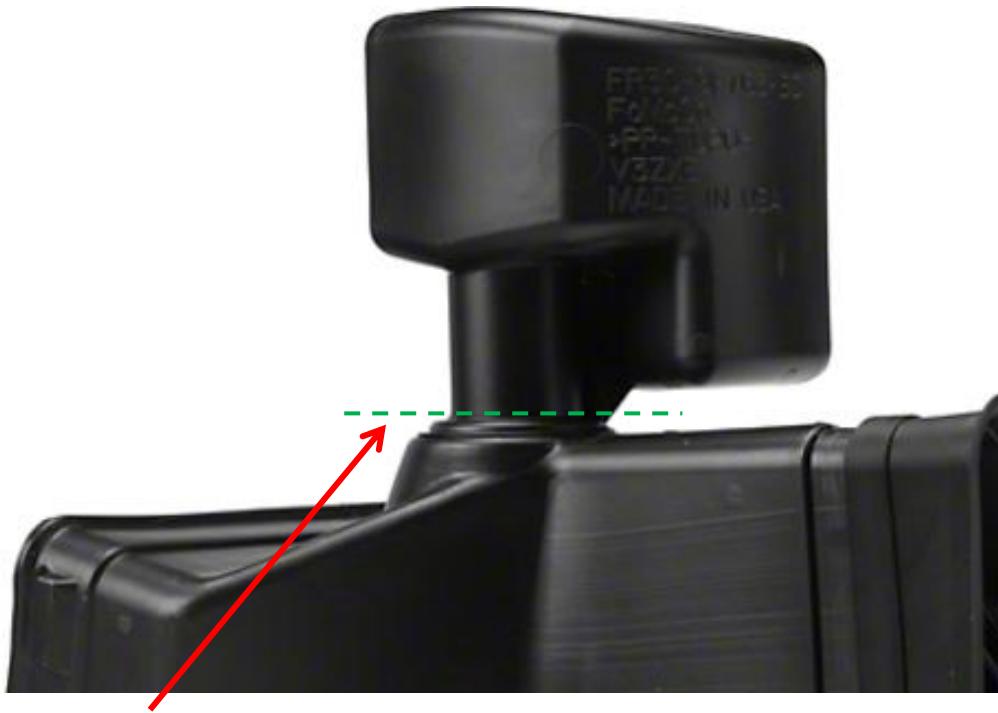

The stock resonator is located here, and looks like a giant shift knob sticking out of the inlet duct attached to your airbox.

This needs to be cut off with a cut-off wheel or dremel.

Stock Resonator

You will need to make a cut, precisely at this location, for the cap to fit.

This is what it should look like after the cut.

You will need to cut directly ABOVE the small shoulder present at the base of the resonator. Do not cut below the shoulder!
