

Dear OmniShaver Customer,

Congratulations on your purchase of the OmniShaver! We hope it meets every expectation. For the best results, please follow these tips for your OmniShaver's use and care.

1. **OmniShaver "LOVES" Slippery Skin** – If you're unsure about what shaving lubricant to use, OmniShave Butter is a great choice.
2. **Don't get Irritated** – To avoid irritating your skin, don't excessively shave the same area. Just 3-4 back and forth strokes should be plenty.

## IMPORTANT

3. **No Going Sideways** – Moving the OmniShaver sideways to switch shaving positions can cause serious cuts. Please use extra care until you're comfortable with its use. *If a cut occurs then a sideways movement was the cause.*
4. **Under Pressure** – While applying downward pressure, make short, quick shaving strokes (2" – 3" back and forth). *Lack of pressure or hesitant strokes will cause your hair to get tugged instead of cut.*

5. **Don't Stop** – Resist the urge to rinse your OmniShaver until finished.
6. **Perfected It** – This customer's video shows correct technique: <http://omnishaver.com/video>
7. **Premium Tips** – Premium OmniShavers like to soak in a hot bath before work. Its metal shaving head will heat up and then radiate that heat back during your shave. Heat alters hair's protein, making it more pliable and easier to shave and the heat feels very nice on your skin too. 😊  
**Attention:** Do not heat your Premium OmniShaver over 160°F (70°C) or you risk melting its plastic parts and burning yourself during use.
8. **The End** – After use, rinse your OmniShaver thoroughly in hot water until you can see through the blades. Give your OmniShaver a quick blow to remove water residue and store in a dry place until your next shave.

# Arm & Leg Shaving Tips

- 1) Premium OmniShaver: Before shaving, heat the metal shaving head in hot water. During your shave, the stored heat will transfer to the hair, changing their protein, making them easier to cut and the heat feels good on the skin too.

## IMPORTANT

- 2) **No Going Sideways** – Moving the OmniShaver sideways to switch shaving positions can cause serious cuts. Please use extra care until you're comfortable with its use. **If a cut occurs then a sideways movement was the cause.**
- 3) **Under Pressure**– While applying downward pressure, make short, quick shaving strokes (2" – 3" back and forth). **Lack of pressure or hesitant strokes will cause your hair to get tugged instead of cut.**
- 4) **One Way Strokes**– **Only shave in "ONE" direction over the knee, ankle, and under arm areas.** Those areas have loose skin and back and forth strokes might cause nicking. **For all other areas, please shave using continuous back and forth strokes.** until your shave is complete.

- 5) Please use a slick lotion like **OmniShave Butter** as lubrication because OmniShaver LOVES slippery skin.
- 6) OmniShaver self-cleans during use so resist the urge to rinse your OmniShaver until you finish shaving.
