

# 1/25th Scale V-2 Launch Table

Thank you for purchasing a Boyce Aerospace Hobbies V-2 Display Launch Table. Please read these directions fully before you begin.

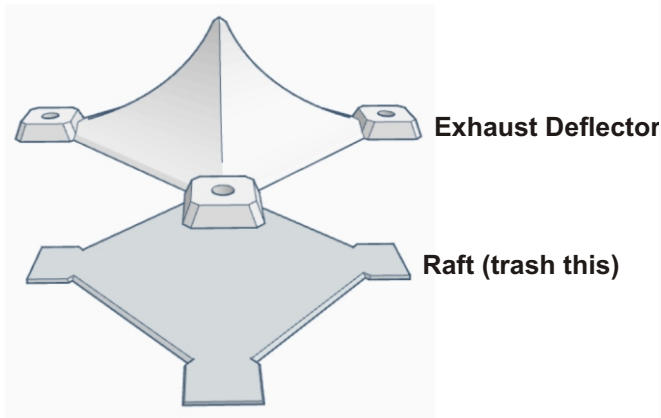

**1**

Sand the following parts until they are smooth to the touch with 220 grit sandpaper.

- 1) Launch Table
- 2) Exhaust Deflector

**2**

Carefully peel the “raft” off the bottom of the exhaust deflector. The raft is 3D printed material that promotes bed adhesion while parts are printed. It is left on to protect the part until it is glued to the launch table.

**3**

Sand the bottom of each leg of the Launch Table until they are a tight fit in the holes of the Exhaust Deflector. Carefully tap the parts together on a flat hard surface then apply super glue around the base of each leg. Wet/Dry sand with 400 grit paper. Allow to Launch Table to dry then spray with caution yellow enamel spray paint.
