

Lumenok[®]

FROM BURT COYOTE LIGHT 'EM UP[®]

 MADE IN THE
USA

2024

THE BRIGHTEST, LONGEST LASTING,
MOST DURABLE LIGHTED NOCKS
ON THE MARKET.

THE ORIGINAL

In 1998 after grunting a mature buck into bow range Curtis Price, president of The Burt Coyote Company, did what every skilled bowhunter has done at times – he missed. The buck exploded and was gone in a flash. Curtis knew he had to make every effort to confirm a hit or a miss. It seemed to take forever to find his arrow but when he did, it was as clean as a whistle – a clean miss.

As Curtis drove home his mind would not stop spinning. Wouldn't it be great if there was a nock that lit up and allowed someone to not only see their arrow in flight but to also mark the location of the arrow if they missed. Price's first concept was to use a chemical mix but when he stopped at his brother Eric's on the way home to tell him his idea, Eric immediately suggested

an LED light and a battery. And so, the Lumenok was born.

Curtis Price, President of The Burt Coyote Company

Eric Price, Vice President of The Burt Coyote Company

Like any new idea, it was a journey of trial and error; but after going through 17 prototypes and four years of experimentation, the Price brothers filed a patent in 2002 and began production of the Lumenok. By 2004 Cabela's and Gander Mountain were carrying Lumenoks and bowhunters were asking for them in their local archery shops.

Today, Lumenoks come in a variety of models and colors to fit almost any arrow shaft. From traditional arrows to the latest in crossbow design, it's almost certain you will find a Lumenok to fit your needs. In addition to manufacturing the Lumenok, Burt Coyote also has been supplying completed crossbow bolts with Lumenoks factory installed since 2006. And with bowfishing exploding in popularity, Burt Coyote also offers fishing arrows with lighted nocks which are ideal for bowfishing at night when many of the larger fish are taken.

The Lumenok offers many advantages to archers and bowhunters alike. Obviously, being able to locate your arrow after you miss the target is a huge plus and was at the heart of Curtis Price's original idea. But being able to easily see an arrow's flight path and hit on the target provides invaluable information that can be used to fine-tune the next shot instantly. The Lumenok is not a gadget, but rather a tool that millions of archers and bowhunters have found they can't live without.

Jim Crane, National Sales Manager of The Burt Coyote Company

Lumenok
BURT COYOTE LIGHT 'EM UP

THE EVOLUTION CONTINUES

From 1998 to today, the Lumenok has evolved to meet the needs of the most demanding bowhunters and archers. Lumenoks are built by hand using the best materials available, so you can be sure you're getting a high-quality product that will last for years to come.

We pledge to continue our research and implement new technologies to ensure that the Lumenok remains the best lighted nock available.

1998

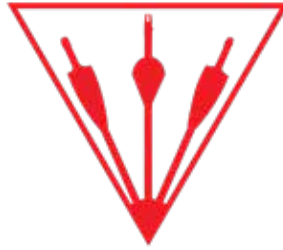

POPE AND YOUNG

Lumenoks are now exempt from Pope and Young's "no electronics attached to the bow or arrow" rule, meaning all animals taken, past or present, with a Lumenok lighted nock or arrow are now eligible to be entered in the Records.

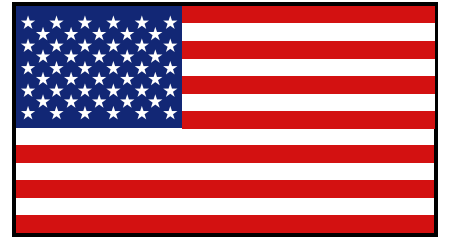

FITS YOUR ARROW

A Lumenok adds only a few grains to your arrow, and works with any aluminum or carbon arrow that uses standard ICS components.

Lumenok also makes "Ready To Shoot" crossbow bolts! Bolts are available with flat, crescent, or capture nocks, with either Blazer or Bohning X Vanes.

MADE IN AMERICA

Lumenok is manufactured in Yates City, Illinois – the heart of the United States and the heart of whitetail country – by The Burt Coyote Company. Lumenok won't make you a better hunter, but it will make you a better archer and more confident in your ability to take "that" shot.

SHOT PLACEMENT MADE EASY

You can buy just about everything you need at the sporting goods store, but you can't buy the confidence gained from seeing your shot from release to impact. Know exactly where your shot went, or find it after a miss: Lumenoks can be seen from more than 100 yards away, can stay lit for up to 40 hours (or until you turn it off), and work again and again hundreds of times! Perfect for the hunter, but archers can also use it as an aid while tuning their equipment in practice sessions. Because of Lumenok's high visibility, small variations in arrow flight are easily detected. Even with today's fastest bows, the shooter can get rapid feedback. Even changing the battery is a quick and easy task, allowing the shooter hundreds upon hundreds of shots!

SIMPLE DESIGN & OPERATION

No magnets, no glue; it contains no switch or any other moving parts. There is nothing to attach to your bow to make it work. Lumenoks contain a simple circuit that relies on the conductive material in your arrow shaft to complete it.

Just swap the original arrow nock with a Lumenok; the nock will light when it is fully seated against the electrically conductive end of the carbon or aluminum arrow shaft. Push the Lumenok out with your thumb and forefinger to disrupt the electrical contact and turn it off. The next time you shoot, the force of the bowstring will push the nock back into contact with the shaft and turn it on – it's that simple!

STRONG AND DURABLE

Unlike our competitors who use bobber lights that are designed for fishing, Lumenoks are built inside a real nock with a larger, brighter LED and made to be shot thousands of times. With too many fragile moving parts that only work for a few cycles of operation, the imitators can't keep up with Lumenok's design: able to withstand being shot at 450+ fps by a bowstring, all to come to a sudden stop in your target. Bowhunters are a rugged breed; that is why we make Lumenoks the brightest and most durable.

LUMENOK LIGHTED ARROW NOCKS

Just remove the original nocks from your arrows and insert the Lumenok. When the nock is fully seated against the electrically conductive end of the carbon or aluminum arrow shaft, the Lumenok lights. By pushing the Lumenok out with your thumb and forefinger or using the Lumenok Extinguisher, you will disrupt the electrical contact between the arrow shaft and the Lumenok, causing the light to go off. At this point the archer can put the Lumenok-equipped arrow in his quiver and forget about it. It will automatically be activated upon release of the arrow when shot, allowing the archer to more easily follow the flight of his arrow.

The Lumenok will remain lit for up to 40 hours or until retrieved and is turned off by pushing reward, separating the nock contact points from the arrow shaft. These nocks will operate hundreds of times.

LONGEST-LASTING

LUMENOK H ADAPTER OUTSERT FOR MICRO DIAMETER SHAFTS

Lumenok has decided to take a different approach to lighting the nocks in 4mm (.166") Micro Diameter shafts. The 4 mm nocks on the market are small and weaker by design than a larger, more robust nock. Brightness is also a challenge when building a smaller nock. Our commitment to providing extremely bright lighted nocks, to allow the archer to follow his arrow from release to impact, has brought us to the current solution.

We are manufacturing aluminum outserts that accept our Lumenok H for this class of shaft. The bore that fits the arrow shaft can be custom machined for your particular shaft. In order to determine that size, the manufacturer, model and spine must be known. The table below demonstrates current outside diameters of most manufacturers .165" & .166" ID shafts.

Depending on the shaft OD, the adapters will weigh between 17 and 22 grains. They are 1.3" long and .285" on their OD. Each set of outserts ordered are supplied with a kit containing glue, abrasive, and instructions on how to apply them.

LUMENOK LIGHTED CROSSBOW BOLT ENDS

No magnets, no glue, no switch, no moving parts. There is nothing to attach to your crossbow, or glue into your bolts to make it work. Lumenoks contain a simple circuit that depends on the conductive material in your bolt shaft to complete it. This is activated upon release of your bolt when shot.

Lumenok's Crescent neck to replace Parker's Capture neck. Our goal is that all Parker crossbow users can confidently use our new style Crescent neck for all of their future needs.

Lumenok's newly designed Crescent neck enhances bowstring safety with additional benefits:

Same ear depth which fully encompasses the bow string -- key for string engagement and the anti-dry fire mechanism;

Contoured ends allow for string engagement even if the bolt is slightly misaligned on the crossbow rail adding an additional safety factor.

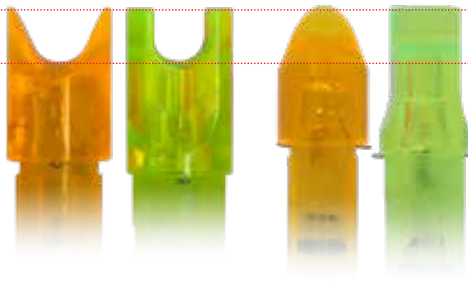

Flat And Crescent Nocks available in HD Orange, Pink, Green, and now Red

Crossbow Nock Replacement Batteries (RBS)

*Does it say "Easton" on the Headhunter label?
If so, it takes ECC. If not, it takes GTC.

Please Note: All Carbon Express bolt shafts are comprised primarily of fiberglass. This fiberglass material does not provide the electrical conductivity that is required to complete the Lumenok's internal circuit and make it light. It is for that reason that The Burt Coyote Company does not recommend the use of our Lumenoks in Carbon Express crossbow bolts.

LUMENOK

LUMEN-ARROW BOLTS

All Lumen-Arrow Bolts are carbon bolts configured with either Bohning Blazer vanes or 3.5" Bohning X Vanes, weighing 321 grains (20") or 341 grains (22"), and are equipped with either a Flat or Crescent model Lumenok, in HD Orange, Green, Pink or Red. Just screw on the point of your choice and shoot.

LUMENOK COMBO PACK

The new Lumenok Combo Pack has everything an archer or hunter needs. It includes 4 Lumenoks, 2 extra Lumenok batteries, and 1 Arrow Puller/Lumenok Extinguisher. Whether you're new to Lumenoks or have been using them for a long time, this Combo Pack is a great kit at a great value.

The goal with this product offering is to give the archer or hunter everything he or she needs to have a great Lumenok experience. It includes four Lumenoks so you can outfit your new or existing arrows. It's has 2 extra batteries in case you need to replace the batteries in some of your older Lumenoks. And it also includes the Arrow Puller/Lumenok Extinguisher which makes turning off your Lumenoks a breeze and pulling arrows out of targets quick and easy.

The Lumenok Combo Pack is available in S, GT, and GTC models and comes in HD Orange or Green.

LUMENOK BOWFISHING

Light up your next after-dark bowfishing trip. Just like on land, the Lumenok lights up on the shot to allow you to follow the flight of your arrow to the target.

Sold as a complete setup, the Lumenok-Equipped Fishing Arrow comes with an Innerloc glow shaft (Unity Glow Arrow) fishing arrow outfitted with an Innerloc grapid point, and 1 Lumenok HD Orange S-nock. You can also purchase the Lumenok Fishing Arrow Adapter separately to glue onto your own 5/16" diameter arrow.

LUMENOK GEAR *Let everyone know you shoot with the best!*

LUMENOK HAT

One size fits all, in Black, Realtree® Hardwoods Green camo or Mossy Oak camo.

LUMENOK Decal

Outdoor-use quality vinyl, 2.5" tall by 11" long.

LUMENOK ARROW PULLER/EXTINGUISHER

Turn off your Lumenoks with just the flick of your wrist! A multi-use tool, the Lumenok Extinguisher is an arrow puller and Lumenok extinguisher all in one, and a must at the range! Bring it along to pull your arrows from the target, then grip the end of the shaft and the Lumenok, shake your wrist, and you're ready to shoot another round.

The new Extinguisher is designed to be stored on an arrow or bolt in your quiver so you know it's always handy. It even absorbs shock from a shot when mounted to an arrow in the quiver.

LUMENOK F.A.S.T. ARROW SQUARING TOOL

Clean and square your arrows just like we do at The Burt Coyote Company with the F.A.S.T. – Fletched Arrow Squaring Tool! Use it on both fletched and unfletched arrows as well as carbon, aluminum or composite arrow shafts for optimum Lumenok function. By using the F.A.S.T., you will add a new level of accuracy to the end condition of your arrow shafts. (Note: Lumenoks work best on carbon or aluminum shafts.)

Made of aircraft-grade aluminum, the F.A.S.T. has been hard anodized to withstand years of use. Small enough to transport or simply attach to your bow bench with just two screws (not included). Each tool comes with 4 self-adhesive abrasive discs that can square the ends of dozens of shafts.

For a video demonstration of arrow squaring with the F.A.S.T., visit Lumenok.com/pages/media.
