"Best mount I've used & the easiest to set up! You guys are legends!"

Ross Dillon

The BEST way to mount your GoPro Action Camera to you kite line in order to capture unreal drone like shots!

The All NEW Xtreme Kite Line Mount V3.0 has been designed, tested and tested some more by some of South Africa's best kiteboarders.

Super STABLE, STRONG and AFFORDABLE are the cornerstones of this awesome mount.

Our mount does not lock the center lines in place like other cheap imitations, we have designed our mount to allow the lines to slide up and down, allowing your lines to 'flag' in an emergency situation if you had to pull the safety release.

The mount is centrally balanced, the camera sits dead centre of the mount and lines, this allows for super stable footage unlike other mounts that are top heavy and result in your camera swinging and shaking uncontrollably!

The new V3.0 Design has gotten rid of the use of elastics to secure the mount the lines - there are now 2 inserts that the line slides into when inserted upside down into the mount, the lines are locked in place on the mount and you are ready to shoot!

The Xtreme Kite Line Mount is a simple design made to fit Hero 2 / 3 / 3+ / 4 / 5 / 6 / 7 / 8 / 9 / 10 & GoPro Max and other Action Cameras.

Centrally Balanced

No more shaky footage, with the camera constantly flipping upside down.

Lifetime Warranty

We will send you a replacement and cover shipping for any factory faults.

Safe

Our mount will not affect your safety release.

Universal Design

Compatible with most leading action cameras.

Used by the best

The All NEW Ultra Kite Line Mount V3.0 has been designed and tested by some of the worlds best kiteboarders.

This is what you will get with your package.

1 x Kite Line Mount

1 x Low Profile Nut And Bolt

2 x Line Lock Off Arms

The camera will fit perfectly into the mounting bracket, make sure it is facing the correct direction - lens facing away from the mount.

Slide the bolt into the mount, hold the nut in the recess, finger tighten the bolt.

Make sure the camera is angled correctly. Take a screwdriver and tighten the bolt as much as possible, the camera should now not be able to move.

4

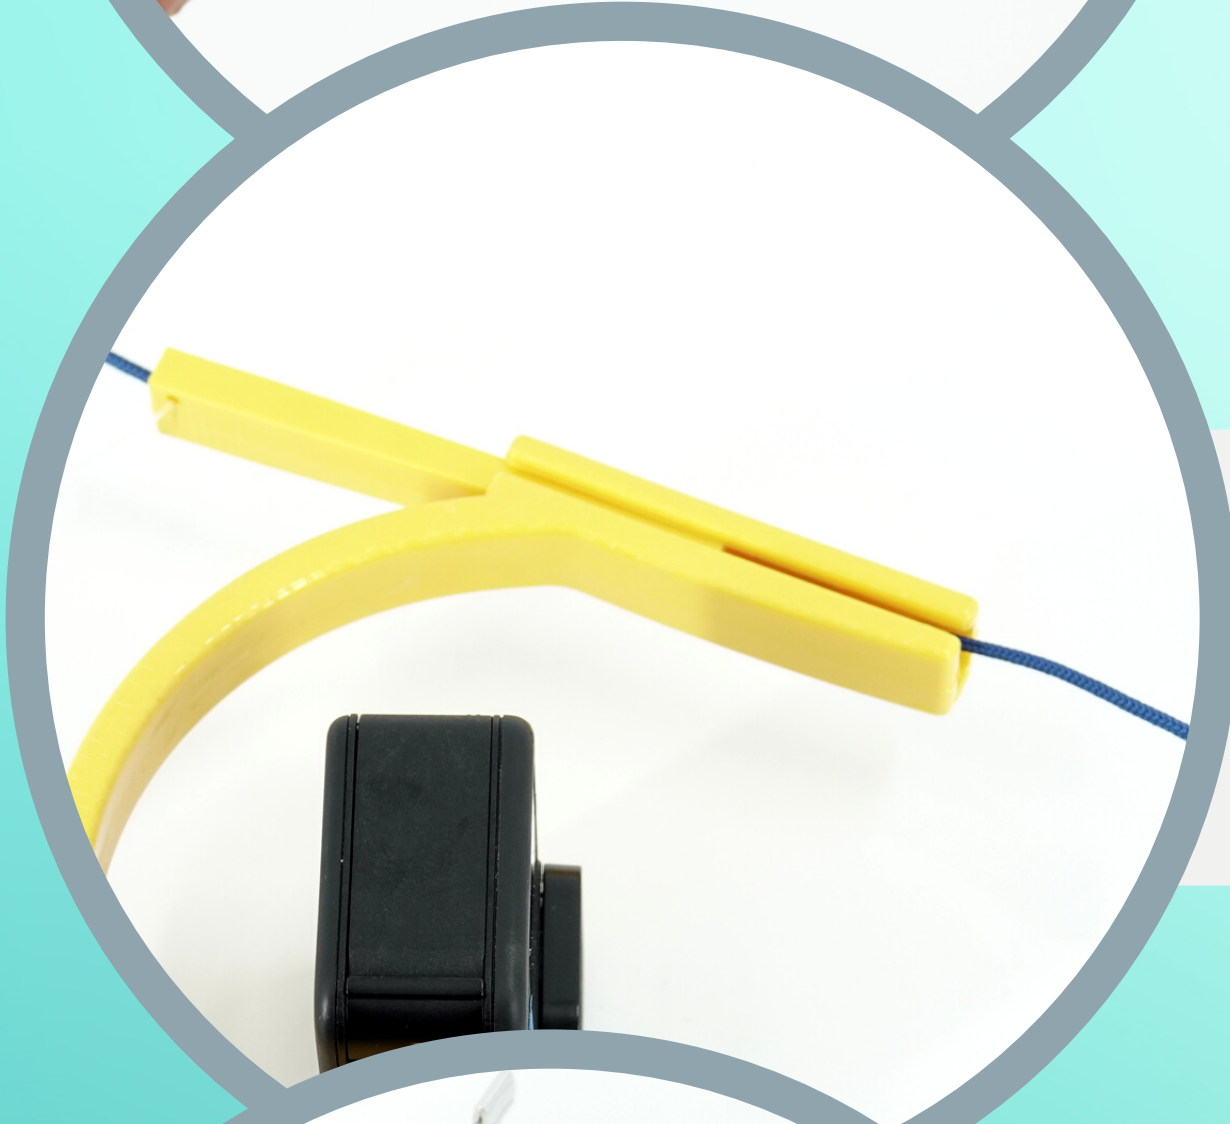

Start Up Guide

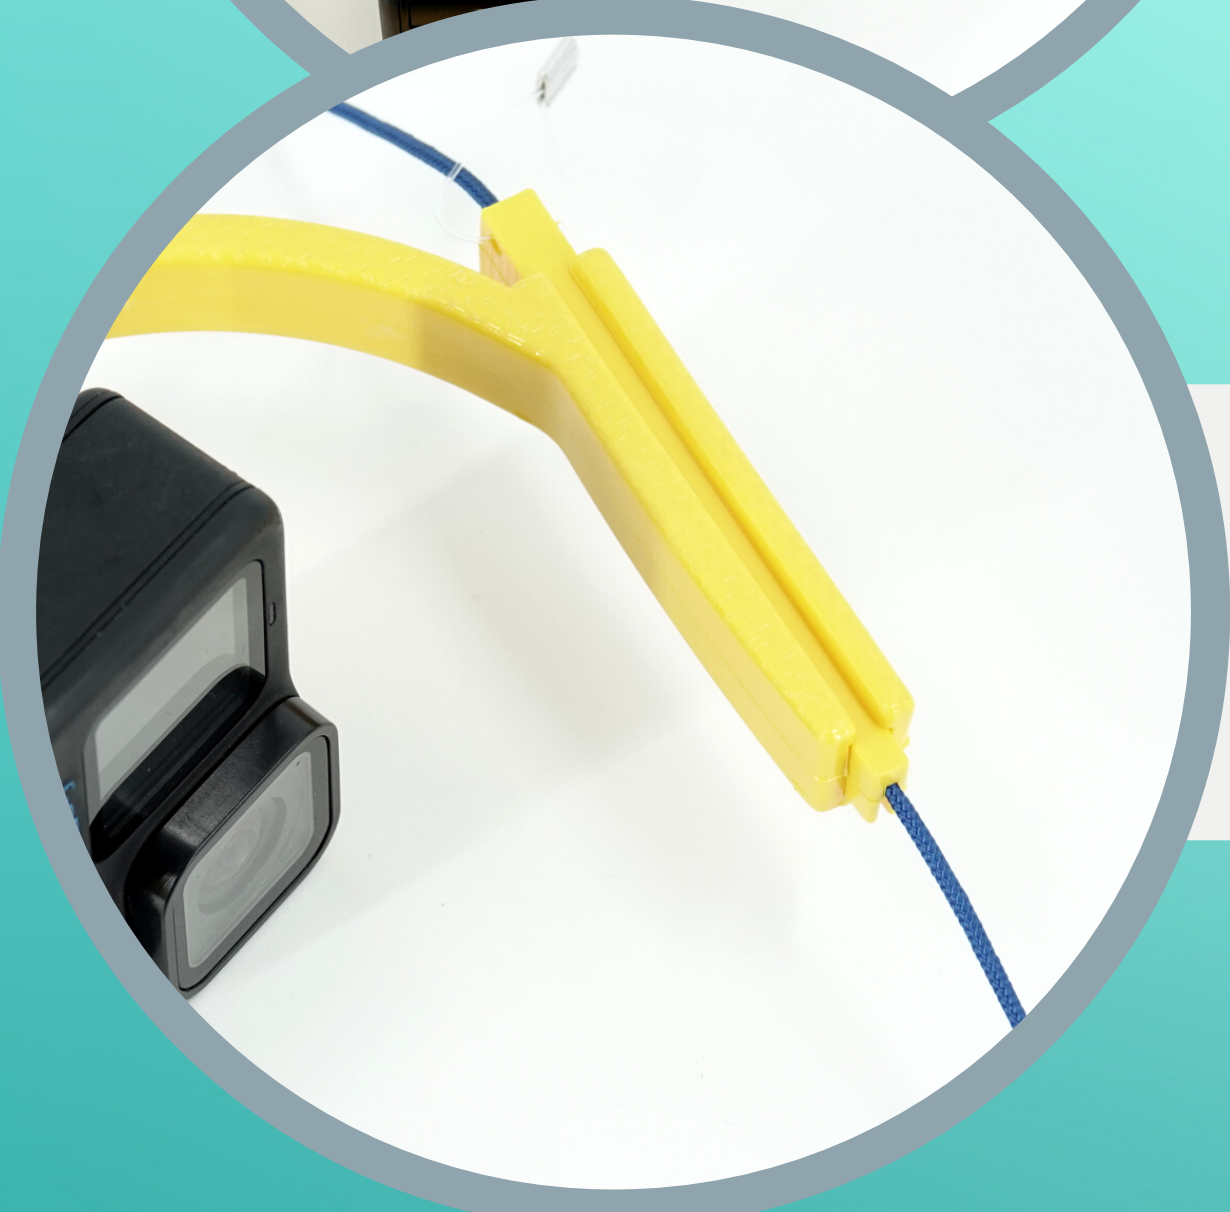

Align the lines into the split in the Line Lock Off Arms

Insert the lines into the Line Lock Off Arms

Insert the Line Lock Off Arms into the mount, **BE SURE TO REVERSE** the Arm so that the line is not facing the open slot (if you do this the wrong way, your mount will fall off the lines!)

Push the Arms in as far as possible, they will be locked in place.

Make sure to put it on this exact position, that way it locks in the lines

Be sure to tighten the velcro as sturdy as possible.

Removing the arms.

Put your finger into the strings attached to the arms, hold the mount and pull until the arm comes out.

We offer a limited lifetime warranty on our Kite Line Mount. Due to our **'TOP SECRET'** material, the mount is extremely flexible and unable to snap like our other competitors.

How to get service?

Email sales@thekitelinemount.com and we will advise where to send your product. Alternatively, you may

call: South Africa: + 27 21 001 8852
