WHY STONE RELIEF
Stone Relief products are the ultimate all-natural remedy for managing kidney stones. Our potent herbal teas and capsules provide powerful pain relief, reduce inflammation, and increase urine output to help pass kidney stones quickly and painlessly. Additionally, our products may be used long-term to:

- Reduce the size/count of existing kidney stones
- Promote healthy kidney function
- Prevent future kidney stones

INGREDIENT QUALITY
Our entire line consists of a thoughtful blend of time-tested, scientifically reviewed, and carefully sourced all-natural, organic, and herbal ingredients. We are proud to offer the following certifications:

- Gluten Guard Certification ensures that all ingredients are thoroughly tested and verified gluten-free by independent labs.
- Non-GMO verification requirements, provides transparency, and ongoing management of ingredients.
- Kosher Certification meets the highest Kosher standards and ensures no GMOs, chemicals, dyes, fillers, binders, or other ingredients that are not naturally occurring.

MANUFACTURING
To help ensure the highest quality products possible, our manufacturing facilities have achieved the following food safety certifications:

- C-GMP FACILITY: FDA Current Good Manufacturing Practice (C-GMP) regulations assure the identity, strength, quality, and purity of products.
- NSF CERTIFIED FACILITY: NSF International is an independent, non-profit organization that certifies food service equipment to ensure food safety.
- MADE IN USA

ABOUT STONE RELIEF
Stone Relief comes from humble beginnings. We started the company in the kitchen of our rented house in California back in 2018. The inspiration for our products came from a diagnosis of an "impassable" 9mm kidney stone. Faced with costly and major surgery to remove the stone, we set out to find a natural and less invasive solution to kidney stone removal that could also be used long-term to help prevent future kidney stones.

We spent an entire year experimenting with numerous prescription medications from Urologists, herbal remedies from natural pharmacies across the country, and systematically exhausted all available resources to us on the subject of kidney stones. After many trials and tribulations, we found relief in the combination of a few simple and natural ingredients which have been in use for generations around the globe.

Unable to find a comparable kidney cleanse product on the market, we partnered with the top supplement and tea manufacturers in the country to bring you Stone Relief. Our mission is to help as many people suffering from kidney stones as we can. We hope that our hard work and products provide you with the relief you need when you need it most.

The Stone Relief Team
INGREDIENT BENEFITS GUIDE

PAIN RELIEF
Kidney Stones can be one of the most painful experiences of a person’s life. Effective pain relief is essential to making the process of passing a kidney stone tolerable.

ANTI-INFLAMMATORY
Passing a kidney stone severely inflames and irritates the urinary tract. Inflammation impedes the movement of the stone and must be decreased to allow the kidney stone to pass.

URINE OUTPUT
Increased urine production and output are required to pass kidney stones. A diuretic will provide the necessary pressure to expel stones from elevated urine production.

ANTI-LITHIC
Protection against future kidney stone formation and destruction of current stones is the function of anti-lithic ingredients. Eliminating stones aids in long-term kidney health and function.

KIDNEY CLEANSE INGREDIENTS

CHANCA PIEDRA
Chanca Piedra (Phyllanthus Niruri) is an Amazonian super-herb whose name translates to “Stone Breaker.” The indigenous people gave it this name due to their effective use of the herb in curing kidney stones and gallstones.

- Medical studies have shown Chanca Piedra to possess pain-relieving qualities that are several times more potent than modern pain medication—all without harmful side effects.
- The herb is an abundant source of bioactive components such as the flavonoids: galloconichuan, rutin, quercetin, and kaempferol, which have well-documented anti-inflammatory and antioxidant properties.
- Chanca Piedra is a potent natural diuretic that has demonstrated significant increases in urine volume and production in medical research studies dating back to 1929.
- A clinical study conducted in 2017 revealed that kidney stone count and size decreased in 67.8% of patients who consumed Chanca Piedra daily for 12 weeks.

DANDELION ROOT
Used for centuries as a natural diuretic, Dandelion Root increases urine production and output along with raising blood flow to the kidneys. The root is also enriched with potassium and does not reduce potassium like other diuretics.

- Proper potassium levels are critical in individuals with kidney stones. Low potassium leads to an excess amount of calcium excreted from the body, which promotes kidney stone formation.
- Dandelion root is also an anti-inflammatory, aiding in pain relief and soothing the passage of kidney stones.

APPLE CIDER VINEGAR
The citric acid found in Apple Cider Vinegar softens, breaks-down, and helps dissolve kidney stones. It has even been shown to help reduce pain and inflammation. Additionally, this vinegar can rid the body of toxins and excess minerals that can lead to kidney stone formation.

LEMON
Lemon is an abundant, natural source of citrate and citric acid. Citrates help block the formation of new kidney stones while citric acid assists in dissolving any current stones.

- Citrate binds with stone-forming compounds such as oxalate (oxalic acid), uric acid, and phosphoric acid to expel them through the urine. Once removed, these compounds can no longer form crystals that would eventually become kidney stones.

HYDRANGEA ROOT
Hydrangea root is an extremely effective diuretic with documented usage dating back to the time of Native Americans. Through increased urine production and output, the root removes impurities from the system and lessens the likelihood of infection along the urinary tract.

- Hydrangea root is also considered an anti-lithic herb that helps prevent the formation of kidney stones.
