

Universal Install GUIDE
For our grille inserts only
We recommend professional help when installing.

1- Remove the factory Grille shell

- 2- Place Grille shell on padded surface
- 3- Before cutting, place the OKF grille on the factory grille shell to see where cuts need to take place. Draw an outline.
 - 4- Make the cuts needed to fit OKF grille (only trim small amounts each time)
- 5- If your grille came with fixed tabs, then drilling will be required. Use a 3/8th drill bit, and the supplied hardware.

If your grille has threaded studs, use the metal tabs provided to hold the OKF grille to the factory shell (trimming may be required to give room for the tabs to function).

6- The OKF grille is installed. Now it is time to reinstall on the vehicle.

Install in reverse order of how it was removed.
