CARE

VELOUR

- / Vacuum the furniture regularly using the upholstery nozzle /or brushing with a soft clothes brush – always in the direction of the nap to remove dust and avoid fluff and pilling.
- / To rejuvenate velour and restore its pile, rub it with a well wrung, slightly damp cloth in the direction of the nap.
- / When you sit on velour fabric, you exert a pressure that forces the nap in different directions. Together with heat, rising air humidity, body moisture and the type of upholstery, this can cause these changes of direction to become fixed, creating a slight change in colour. This is a typical property of velour, and is neither a defect nor a sign of low quality. This effect can be removed by applying a damp (not wet) cloth and leaving it overnight, which will restore the pile to its original direction. The upholstered furniture should not be used until it is completely dry. If necessary, a hair dryer can be used at a low temperature setting.
- / The same result can be achieved by steaming or spraying distilled water at a distance of 20 cm from the fabric for a few seconds, before leaving overnight. Care should be taken not to spill large quantities of water on the fabric. It is advisable to treat the whole surface in order to avoid shading. This treatment can be repeated if necessary. After this treatment, the upholstered furniture must be completely dry before it can be used again. A hair dryer at a low temperature setting can be used. To restore the pile to its original direction, please brush with a soft brush.
