

North Florida Surgeon Creates Science-Based Skincare Line Using Nobel Prize-Winning Technology

Nourishing Biologicals, putting science into beauty.

Nourishing Biologicals: a skincare line where science meets beauty

SAINT AUGUSTINE, Fla. ([PRWEB](#)) August 23, 2019

[Nourishing Biologicals](#), a science-based skincare company, was created by North Florida surgeon, Dr. George Sadowski M.D., to treat the cause, not the symptom, of aging skin with advanced Miracular Cellular Communication™.

Dr. Sadowski's patients often asked him to recommend skincare products for post-surgery treatment, but he couldn't find a product-line that used ingredients that truly addressed the issue of damaged skin.

"As a biologist and surgeon with over 30 years of professional experience, I came to develop a skincare company because most of the products I had tested over the years were ineffective, didn't contain the active ingredients necessary to really work, and even contained toxins in some cases," said Dr. George Sadowski M.D., founder of Nourishing Biologicals.

Nourishing Biologicals is the result of painstaking research that uses Nobel prize-winning technology to create one of the most advanced skincare lines on the market. Dr. George's profound discovery of Miracular Cellular Communication™ allows ingredients within Nourishing Biologicals products to repair defects at the cellular level through the penetration of the skin.

Dr. Sadowski also found that for a product to work it must follow the 500 Dalton Rule. Simply put the 500 Dalton Rule stipulates that molecules applied to the skin that weighs more than 500 Daltons can't penetrate the skin to cause an effect. Because of this, formulas claiming to improve skin health must contain ingredients that conform to this rule or contain ingredients such as growth factors that work through cell receptors.

Skincare products must also be formulated with toxic-free ingredients that can combat free radical damage and inflammation to truly treat the underlying problem of aging. This can be done using naturally occurring compounds such as antioxidants, anti-inflammatories and growth factors. These types of ingredients work to prevent and reverse, rather than simply treat the inflammation.

The brand's L'Unique Miracular Rejuvenation collection contains the latest ingredients involved in cellular communication and active constituents proven to work by quantifiable, scientific studies. Ingredients include hyaluronic acid, peptides, and growth factors that promote the rebuilding of collagen, elastin, and new skin cells. At first, Nourishing Biologicals was only offered to Dr. Sadowski's patients. Now, the four product anti-aging skincare line is available to the public.

After the brand conducted twelve-week medical trials, each patient saw positive results, providing exciting data from the trial period is supportive of this promising new approach for treating individual's unique skincare needs.
